

## CONTENTS

CONTRIBUTORS . . . . .	vii
PREFACE . . . . .	ix
FUTURE CONTRIBUTIONS . . . . .	xi

### V-Vector Algebra and Volterra Filters

ALBERTO CARINI, ENZO MUMOLO, AND GIOVANNI L. SICURANZA

I. Introduction . . . . .	2
II. Volterra Series Expansions and Volterra Filters . . . . .	4
III. V-Vector Algebra . . . . .	12
IV. V-Vectors for Volterra and Linear Multichannel Filters . . . . .	24
V. A Novel Givens Rotation-Based Fast QR-RLS Algorithm . . . . .	29
VI. Nonlinear Prediction and Coding of Speech and Audio by Using V-Vector Algebra and Volterra Filters . . . . .	42
VII. Summary . . . . .	54
Appendix I: The Givens Rotations . . . . .	55
Appendix II: Some Efficient Factorization Algorithms . . . . .	56
References . . . . .	59

### A Brief Walk through Sampling Theory

ANTONIO G. GARCÍA

I. Starting Point . . . . .	64
II. Orthogonal Sampling Formulas . . . . .	65
III. Classical Paley–Wiener Spaces Revisited . . . . .	92
IV. Sampling Stationary Stochastic Processes . . . . .	124
V. At the End of the Walk . . . . .	128
References . . . . .	132

### Kriging Filters for Space–Time Interpolation

WILLIAM S. KERWIN AND JERRY L. PRINCE

I. Introduction . . . . .	140
II. Data Model . . . . .	141
III. Review of Kriging Methods . . . . .	143
IV. Best Linear Unbiased Prediction . . . . .	150
V. Cokriging Filters . . . . .	158
VI. Space–Time Kriging Filters . . . . .	164

VII. Applications . . . . .	171
VIII. Discussion and Conclusion. . . . .	184
Appendix: Optimality of Filtering Algorithms. . . . .	187
References . . . . .	192

**Constructions of Orthogonal and Biorthogonal Scaling Functions  
and Multiwavelets Using Fractal Interpolation Surfaces**

BRUCE KESSLER

I. Introduction . . . . .	195
II. Scaling Function Constructions . . . . .	204
III. Associated Multiwavelets . . . . .	209
IV. Wavelet Constructions . . . . .	218
V. Applications to Digitized Images . . . . .	226
Appendix . . . . .	232
References . . . . .	250

**Diffraction Tomography for Turbid Media**

CHARLES L. MATSON

I. Introduction . . . . .	253
II. Background . . . . .	259
III. Diffraction Tomography for Turbid Media: The Forward Model . . . . .	268
IV. Backpropagation in Turbid Media . . . . .	281
V. Signal-to-Noise Ratios . . . . .	316
VI. Concluding Remarks . . . . .	338
References . . . . .	339

**Tree-Adapted Wavelet Shrinkage**

JAMES S. WALKER

I. Introduction . . . . .	343
II. Comparison of Taws and Wiener Filtering . . . . .	345
III. Wavelet Analysis . . . . .	348
IV. Fundamentals of Wavelet-Based Denoising . . . . .	358
V. Tree-Adapted Wavelet Shrinkage . . . . .	366
VI. Comparison of Taws with Other Techniques . . . . .	383
VII. Conclusion . . . . .	391
References . . . . .	391

INDEX . . . . .	395
