<b>Preface</b>	<b>xvii</b>
<b>Acknowledgments</b>	<b>xix</b>
<b>PART I GENERAL INTRODUCTION</b>	<b>1</b>
<b>1 Introductory Remarks</b>	<b>3</b>
<b>2 Structure Formation in Fluids and Plasmas</b>	<b>6</b>
2.1 Flow in a Pipe	6
2.1.1 Enhancement of Mixing Effects Due to Turbulence	6
2.1.2 Mean-Flow Structure Formation in Pipe Flows	8
2.2 Magnetic-Field Generation by Turbulent Motion	9
2.3 Collimation of Jets	13
2.4 Magnetic Confinement of Plasmas	15
2.4.1 Magnetic Confinement and Toroidal Plasmas	15
2.4.2 Flows in Toroidal Plasmas	17
2.4.3 Topological Change of Magnetic Surfaces	17
2.5 Nonlinearity in Transport and Structural Transition	18
2.5.1 Nonlinear Gradient-Flux Relation	18
2.5.2 Bifurcation in Flow	19
2.5.3 Bifurcation in Structural Formation	20
References	23
<b>PART II FLUID TURBULENCE</b>	<b>25</b>
<b>Nomenclature</b>	<b>26</b>
<b>3 Fundamentals of Fluid Turbulence</b>	<b>28</b>
3.1 Fundamental Equations	28
3.2 Averaging Procedures	31
3.3 Ensemble-Mean Equations	32
3.3.1 Mean-Field Equations	32

3.3.2	Turbulence Equations	33
3.4	Homogeneous Turbulence	41
3.4.1	Fundamental Concepts	42
3.4.2	Kolmogorov's Scaling Law	48
3.4.3	Failure of Kolmogorov's Scaling	52
3.4.4	Two-Dimensional Turbulence	55
3.5	Production and Diffusion Characteristics of Turbulent Energy	56
	References	59
<b>4</b>	<b>Heuristic Turbulence Modelling</b>	<b>60</b>
4.1	Approaches to Turbulence	60
4.2	Algebraic Turbulence Modelling	62
4.2.1	Modelling of Reynolds Stress	62
4.2.2	Modelling of Heat Flux	65
4.2.3	Modelling of Turbulence Equations	66
4.2.4	The Simplest Algebraic Model	71
4.2.5	Investigation into Some Representative Turbulent Flows	72
4.3	Second-Order Modelling	79
4.3.1	Modelling of Pressure–Strain Term	79
4.3.2	Modelling of Dissipation and Transport Terms	80
4.3.3	The Simplest Second-Order Model and its Relationship with a Higher-Order Algebraic Model	81
4.4	A Variational-Method Model	82
4.4.1	Helicity and Vortical-Structure Persistence	83
4.4.2	Derivation of the Vorticity Equation Using the Variational Method	84
4.4.3	Analysis of Swirling Pipe Flow	85
4.4.4	Swirl Effect on Reynolds Stress	88
4.5	Subgrid-Scale Modelling	90
4.5.1	Filtering Procedure	90
4.5.2	Filtered Equations	92
4.5.3	Fixed-Parameter Modelling	94
4.5.4	Dynamic Model	99
	References	102
<b>5</b>	<b>Statistical Theory of Fluid Turbulence</b>	<b>104</b>
5.1	Mathematical Methods Necessary for Turbulence Theory	104
5.1.1	Partial Summation of Infinite Series	104
5.1.2	Gaussian Distribution Function	105
5.1.3	Solution of Differential Equation Using Method of Partial Summation	108
5.2	Theoretical Approach to Inhomogeneous Turbulence	110
5.2.1	Perturbational Method to Turbulence	111
5.2.2	Introduction of Green's Function	115

5.2.3	Statistical Evaluation of Reynolds Stress	125
5.3	Contributions to Turbulence Modelling	133
5.3.1	Modelling of the Turbulent-Energy Equation	133
5.3.2	Modelling of the Mach-Number Effect	135
	References	141
 <b>PART III MAGNETOHYDRODYNAMIC TURBULENCE: DYNAMO</b>		<b>143</b>
	<b>Nomenclature</b>	<b>144</b>
<b>6</b>	<b>Fundamentals of Mean-Field Theory of Dynamo</b>	<b>146</b>
6.1	One-Fluid Magnetohydrodynamic Approximation	146
6.1.1	Fundamental Equations	146
6.1.2	Nondimensional Parameters Characterizing Flows	150
6.1.3	Elsasser's Variables and Conservation Properties	153
6.2	Cowling's Anti-Dynamo Theorem	154
6.3	Mean-Field Equations	156
6.4	Turbulence Equations	158
	References	160
<b>7</b>	<b>Theoretical Estimate of Turbulence Effects on Magnetic-Field Equations</b>	<b>161</b>
7.1	Kinematic Method	161
7.1.1	Introduction of Two Scales and Scale-Parameter Expansion	161
7.1.2	Evaluation of Turbulent Electromotive Force	163
7.1.3	Evaluation of Reynolds Stress	166
7.2	Counter-Kinematic Method	167
7.2.1	Scale-Parameter Expansion	167
7.2.2	Evaluation of Turbulent Electromotive Force	170
7.2.3	Evaluation of Reynolds Stress	171
7.3	Discussions on Dynamo Effects from Kinematic and Counter-Kinematic Methods	172
7.3.1	Mathematical Features of Obtained Expressions	172
7.3.2	Physical Meanings of Obtained Expressions	173
7.4	Magnetohydrodynamic Method	176
7.4.1	Elsasser's Variables and Two-Scale Description	176
7.4.2	Perturbational Solution	178
7.4.3	Evaluation of Elsasser's Reynolds Stress	181
7.4.4	Comparison with Kinematic and Counter-Kinematic Methods	183
	References	186
<b>8</b>	<b>One-Point Dynamo Modelling with Emphasis on Self-Consistency</b>	<b>187</b>
8.1	Necessity and Significance of One-Point Modelling	187

8.2	Modelling Policy and Procedures	188
8.3	Summary of Dynamo Model	191
8.3.1	System of Model Equations	192
8.3.2	Model Constants	194
8.3.3	Remarks on Characteristic Time Scales	195
	References	197
<b>9</b>	<b>Typical Magnetic-Field Generation Processes</b>	<b>198</b>
9.1	Dominant-Helicity Dynamo	198
9.1.1	Convection Columns and Helicity	198
9.1.2	Mean-Field Equations	199
9.1.3	Turbulence Equations	201
9.2	Dominant/Cross-Helicity State	203
9.2.1	Mean-Field Equations	203
9.2.2	Turbulence Equations	205
9.3	Traditional Kinematic Dynamos	206
9.3.1	Alpha-Alpha Dynamo	207
9.3.2	Alpha-Omega Dynamo	208
	References	209
<b>10</b>	<b>Application to Astro/Geophysical and Fusion Dynamos</b>	<b>210</b>
10.1	Solar Magnetic Fields	210
10.1.1	Sunspot's Magnetic Field	210
10.1.2	Relationship of Sunspot's Polarity with Polar Field	212
10.1.3	Lorentz Force and Meridional Flow	213
10.1.4	Mean-Field-Theory Interpretation of Polarity Reversal	214
10.2	Geomagnetic Fields	215
10.2.1	Computer Simulation of Geodynamo	215
10.2.2	Saturation of Generated Magnetic Field	216
10.2.3	Frame-Rotation Effect on Magnetic Field	218
10.3	Collimation of Accretion-Disc Jets	220
10.3.1	Computer Simulation and Mean-Field Theory	220
10.3.2	Driving Force of Bipolar Jets	220
10.3.3	Collimation Mechanism Due to Magnetic Effect	222
10.3.4	Sustainment of Turbulent State	224
10.3.5	Physical Interpretation of Jet Collimation	226
10.4	Reversed-Field Pinches of Plasmas	226
10.4.1	Magnetic Plasma Confinement in a Torus	226
10.4.2	Derivation of Force-Free Field by Mean-Field Theory	228
10.4.3	Derivation of Force-Free Field by Variational Method	229
10.5	Plasma Rotation in Tokamaks	230
10.6	Transport Suppression Due to Electric-Field Effects	233

10.6.1	Equations with Electric-Field Effects Supplemented	233
10.6.2	Analysis of Turbulent Transport Rate of Thermal Energy	234
10.6.3	Effect of Radial Electric Field on Thermal-Energy Transport	235
	References	237
 <b>PART IV PLASMA TURBULENCE</b>		 <b>239</b>
	<b>Nomenclature</b>	<b>241</b>
<b>11</b>	<b>Equations for Plasmas</b>	<b>244</b>
11.1	Fluid Equations	244
11.2	Reduced Set of Equations	245
11.2.1	Yagi–Horton Equations	246
11.2.2	Hasegawa–Mima Equation	248
11.2.3	Hasegawa–Wakatani Equations	249
11.2.4	Reduced MHD Equations	250
11.3	Reduced Set of Equations and Conservation Property	250
11.3.1	Hasegawa–Mima Equation	251
11.3.2	Three-Field Equations	252
11.3.3	Yagi–Horton Equations	253
11.3.4	Dissipation and Transport Flux	253
11.4	Kinetic Equation	255
11.4.1	Vlasov Equation	255
11.4.2	Gyro-Averaged Equations	255
	Appendix 11A Relations in Thermodynamics and Mean-Field Equation	256
	References	256
<b>12</b>	<b>Inhomogeneity and Modes in Plasmas</b>	<b>258</b>
12.1	Linear Mode	258
12.1.1	Dispersion Relation	258
12.1.2	Vlasov Equation and Linear Dielectric Tensor	259
12.2	Examples of Modes	261
12.2.1	Ion Sound Wave, Drift Wave and Convective Cell	261
12.2.2	Shear Alfvén Wave and Drift Alfvén Mode	263
12.2.3	Interchange Mode	263
12.2.4	Ion Temperature Gradient Mode	264
12.2.5	Dissipative Drift Mode	264
12.3	Weak Turbulence Theory	264
12.3.1	Ansatz of Weak Turbulence	264
12.3.2	Wave Kinetic Equation	265
12.3.3	Integral, Lyapunov Function and Thermodynamics	266
12.4	Transport Matrix and Symmetry	268

Appendix 12A Quasilinear Theory of Transport	269
References	272
<b>13 Inhomogeneous Strong Turbulence</b>	<b>273</b>
13.1 Regime of Strong Plasma Turbulence	273
13.2 Concepts to Describe Inhomogeneous Turbulent Plasmas	274
13.2.1 Gradients (Magnetic Surface, Shear, etc.)	274
13.2.2 Mode, Wave, and Vortex	276
13.2.3 Propagating Solitary Structure	277
13.2.4 Convective Cell, Zonal Flow and Streamer	277
13.2.5 Reconnection, Island Overlapping, Braiding, and Mixing	278
13.2.6 Plume and Avalanche (Time Intermittence)	279
13.2.7 Clumps	279
13.3 Microscale and Mesoscale Structures and Competition	280
Appendix 13A Clumps	281
References	282
<b>14 Method for Strong Turbulence I. Renormalization and Statistical Method</b>	<b>284</b>
14.1 Resonance Broadening and Renormalization in the Kinetic Propagator	284
14.1.1 Renormalization of the Propagator	284
14.1.2 Strong Turbulence Limit and Fluid Model	286
14.1.3 Strong Turbulence Limit and Kubo Number	287
14.2 Nonlinear Response in Fluid-Like Equations	288
14.2.1 Short-Wavelength Fluctuations	288
14.2.2 Rapidly-Changing, Long-Wavelength Components	289
14.2.3 Static but Sheared Flow	292
14.2.4 On Rigorous Upper Bound	292
14.3 Renormalization in a Reduced Set of (Fluid-Like) Equations	292
14.4 Randomness and the Statistical Picture	295
14.4.1 Estimate of Random Source Term	295
14.4.2 Dynamical Equations for Correlation Functions	296
14.4.3 Langevin Equations	297
14.4.4 Example of Three-Field Model	298
14.5 Fokker–Planck Equation	300
14.5.1 Projected Variable	300
14.5.2 Fokker–Planck Equation	300
14.5.3 Equilibrium Probability Density Function	300
14.5.4 H-Theorem	300
14.5.5 Tail in Probability Density	301
14.6 Memory Effects and Non-Markovian Property	301

Appendix 14A Rigorous Upper Bounds for Transport	303
References	305
<b>15 Methods for Strong Turbulence II. Scale Invariance Method</b>	<b>307</b>
15.1 Fluid Models	307
15.1.1 Reynolds Number and Drag	307
15.1.2 Spectrum	308
15.2 Plasma Models	309
15.2.1 Transport Coefficient	309
15.2.2 Spectrum	311
References	311
<b>16 Methods for Strong Turbulence III. Model Based on Reduced Variables</b>	<b>313</b>
16.1 Lorenz Model	313
16.2 Shell Model	314
16.2.1 One-Dimensional Model	314
16.2.2 Multiple-Bin Model	316
16.3 $K$ - $\epsilon$ Model	317
16.4 Mapping Models	317
16.4.1 Standard Map	318
16.4.2 Other Maps	318
References	319
<b>17 Inhomogeneity-Driven Turbulence</b>	<b>320</b>
17.1 Typical Examples	320
17.1.1 Dissipative Interchange Mode	320
17.1.2 Ion Temperature Gradient (ITG) Mode	323
17.1.3 Electron Temperature Gradient (ETG) Mode	324
17.1.4 Kinetic Instabilities	325
17.2 Influence of Magnetic Field Structure	326
17.2.1 Drift Due to the Magnetic Field Gradient	326
17.2.2 Trapped Particle Instability	327
17.2.3 Toroidal Ion Temperature Gradient (ITG) Mode	328
17.2.4 Current-Diffusive Ballooning Mode (CDBM)	
Turbulence	329
