<b>Chapter 1 Data Acquisition and Recording</b>	<b>1</b>
1.1 Introduction	1
1.2 Basic sampling requirements	2
1.2.1 Sampling interval	3
1.2.2 Sampling duration	4
1.2.3 Sampling accuracy	6
1.2.4 Burst sampling versus continuous sampling	6
1.2.5 Regularly versus irregularly sampled data	7
1.2.6 Independent realizations	8
1.3 Temperature	8
1.3.1 Mercury thermometers	9
1.3.2 The mechanical bathythermograph (MBT)	12
1.3.3 Resistance thermometers (expendable bathythermograph: XBT)	14
1.3.4 Salinity/conductivity–temperature–depth profilers	18
1.3.5 Dynamic response of temperature sensors	19
1.3.6 Response times of CTD systems	22
1.3.7 Temperature calibration of STD/CTD profilers	23
1.3.8 Sea surface temperature	24
1.3.9 The modern digital thermometer	30
1.3.10 Potential temperature and density	32
1.4 Salinity	33
1.4.1 Salinity and electrical conductivity	34
1.4.2 The practical salinity scale	39
1.4.3 Nonconductive methods	42
1.5 Depth or pressure	42
1.5.1 Hydrostatic pressure	42
1.5.2 Free-fall velocity	43
1.5.3 Echo sounding	48
1.5.4 Other depth sounding methods	54
1.6 Sea-level measurement	55
1.6.1 Tide and pressure gauges	58
1.6.2 Satellite altimetry	62
1.6.3 Inverted echo sounder (IES)	63

1.6.4	Wave height and direction	67
1.7	Eulerian currents	68
1.7.1	Early current meter technology	70
1.7.2	Rotor-type current meters	70
1.7.3	Nonmechanical current meters	78
1.7.4	Profiling acoustic Doppler current meters (ADCM)	83
1.7.5	Comparisons of current meters	94
1.7.6	Electromagnetic methods	95
1.7.7	Other methods of current measurement	96
1.7.8	Mooring logistics	97
1.7.9	Acoustic releases	99
1.8	Lagrangian current measurements	102
1.8.1	Drift cards and bottles	103
1.8.2	Modern drifters	104
1.8.3	Processing satellite-tracked drifter data	107
1.8.4	Drifter response	109
1.8.5	Other types of surface drifters	115
1.8.6	Subsurface floats	116
1.8.7	Surface displacements in satellite imagery	119
1.9	Wind	119
1.10	Precipitation	125
1.11	Chemical tracers	127
1.11.1	Conventional tracers	128
1.11.2	Light attenuation and scattering	138
1.11.3	Oxygen isotope: $\delta^{18}\text{O}$	142
1.11.4	Helium-3; helium/heat ratio	143
1.12	Transient chemical tracers	145
1.12.1	Tritium	146
1.12.2	Radiocarbon	149
1.12.3	Chlorofluorocarbons	153
1.12.4	Radon-222	155
1.12.5	Sulfur hexafluoride	157
1.12.6	Strontium-90	158
<b>Chapter 2</b>	<b>Data Processing and Presentation</b>	<b>159</b>
2.1	Introduction	159
2.2	Calibration	160
2.3	Interpolation	161
2.4	Data presentation	162
2.4.1	Introduction	162
2.4.2	Vertical profiles	167
2.4.3	Vertical sections	170
2.4.4	Horizontal maps	172
2.4.5	Map projections	177
2.4.6	Characteristic or property versus property diagrams	181
2.4.7	Time-series presentation	185
2.4.8	Histograms	187
2.4.9	New directions in graphical presentation	187

<b>Chapter 3 Statistical Methods and Error Handling</b>	<b>193</b>
3.1 Introduction	193
3.2 Sample distributions	194
3.3 Probability	197
3.3.1 Cumulative probability functions	200
3.4 Moments and expected values	201
3.4.1 Unbiased estimators and moments	203
3.4.2 Moment generating functions	204
3.5 Common probability density functions	207
3.6 Central limit theorem	211
3.7 Estimation	214
3.8 Confidence intervals	216
3.8.1 Confidence interval for $\mu$ ( $\sigma$ known)	217
3.8.2 Confidence interval for $\mu$ ( $\sigma$ unknown)	218
3.8.3 Confidence interval for $\sigma^2$	219
3.8.4 Goodness-of-fit test	220
3.9 Selecting the sample size	224
3.10 Confidence intervals for altimeter bias estimates	225
3.11 Estimation methods	227
3.11.1 Minimum variance unbiased estimation	228
3.11.2 Method of moments	229
3.11.3 Maximum likelihood	230
3.12 Linear estimation (regression)	233
3.12.1 Method of least squares	234
3.12.2 Standard error of the estimate	238
3.12.3 Multivariate regression	239
3.12.4 A computational example of matrix regression	240
3.12.5 Polynomial curve fitting with least squares	242
3.12.6 Relationship between least-squares and maximum likelihood	242
3.13 Relationship between regression and correlation	243
3.13.1 The effects of random errors on correlation	244
3.13.2 The maximum likelihood correlation estimator	245
3.13.3 Correlation and regression: cause and effect	246
3.14 Hypothesis testing	249
3.14.1 Significance levels and confidence intervals for correlation	253
3.14.2 Analysis of variance and the $F$ -distribution	254
3.15 Effective degrees of freedom	257
3.15.1 Trend estimates and the integral time scale	261
3.16 Editing and despiking techniques: the nature of errors	266
3.16.1 Identifying and removing errors	266
3.16.2 Propagation of error	273
3.16.3 Dealing with numbers: the statistics of roundoff	274
3.16.4 Gauss–Markov theorem	277
3.17 Interpolation: filling the data gaps	277
3.17.1 Equally and unequally spaced data	277
3.17.2 Interpolation methods	279
3.17.3 Interpolating gappy records: practical examples	286
3.18 Covariance and the covariance matrix	290

3.18.1	Covariance and structure functions	291
3.18.2	A computational example	291
3.18.3	Multivariate distributions	293
3.19	Bootstrap and jackknife methods	294
3.19.1	Bootstrap method	295
3.19.2	Jackknife method	301

**Chapter 4 The Spatial Analyses of Data Fields**

		305
4.1	Traditional block and bulk averaging	305
4.2	Objective analysis	309
4.2.1	Objective mapping: examples	314
4.3	Empirical orthogonal functions	319
4.3.1	Principal axes of a single vector time series (scatter plot)	325
4.3.2	EOF computation using the scatter matrix method	328
4.3.3	EOF computation using singular value decomposition	332
4.3.4	An example: deep currents near a mid-ocean ridge	334
4.3.5	Interpretation of EOFs	336
4.3.6	Variations on conventional EOF analysis	340
4.4	Normal mode analysis	344
4.4.1	Vertical normal modes	344
4.4.2	An example: normal modes of semidiurnal frequency	347
4.4.3	Coastal-trapped waves (CTWs)	350
4.5	Inverse methods	356
4.5.1	General inverse theory	356
4.5.2	Inverse theory and absolute currents	361
4.5.3	The IWEX internal wave problem	366
4.4.4	Summary of inverse methods	370

**Chapter 5 Time-series Analysis Methods**

		371
5.1	Basic concepts	371
5.2	Stochastic processes and stationarity	373
5.3	Correlation functions	374
5.4	Fourier analysis	380
5.4.1	Mathematical formulation	381
5.4.2	Discrete time series	384
5.4.3	A computational example	387
5.4.4	Fourier analysis for specified frequencies	388
5.4.5	The fast Fourier transform	390
5.5	Harmonic analysis	392
5.5.1	A least-squares method	392
5.5.2	A computational example	395
5.5.3	Harmonic analysis of tides	397
5.5.4	Choice of constituents	398
5.5.5	A computational example for tides	399
5.5.6	Complex demodulation	402
5.6	Spectral analysis	404
5.6.1	Spectra of deterministic and stochastic processes	409

5.6.2	Spectra of discrete series	413
5.6.3	Conventional spectral methods	417
5.6.4	Spectra of vector series	425
5.6.5	Effect of sampling on spectral estimates	432
5.6.6	Smoothing spectral estimates (windowing)	441
5.6.7	Smoothing spectra in the frequency domain	450
5.6.8	Confidence intervals on spectra	454
5.6.9	Zero-padding and prewhitening	455
5.6.10	Spectral analysis of unevenly spaced time series	460
5.6.11	General spectral bandwidth and $Q$ of the system	461
5.6.12	Summary of the standard spectral analysis approach	461
5.7	Spectral analysis (parametric methods)	464
5.7.1	Some basic concepts	467
5.7.2	Autoregressive power spectral estimation	468
5.7.3	Maximum likelihood spectral estimation	478
5.8	Cross-spectral analysis	480
5.8.1	Cross-correlation functions	480
5.8.2	Cross-covariance method	482
5.8.3	Fourier transform method	482
5.8.4	Phase and cross-amplitude functions	484
5.8.5	Coincident and quadrature spectra	485
5.8.6	Coherence spectrum (coherency)	486
5.8.7	Frequency response of a linear system	490
5.8.8	Rotary cross-spectral analysis	495
5.9	Wavelet analysis	501
5.9.1	The wavelet transform	502
5.9.2	Wavelet algorithms	504
5.9.3	Oceanographic examples	505
5.9.4	The S-transformation	508
5.9.5	The multiple filter technique	511
5.10	Digital filters	516
5.10.1	Introduction	518
5.10.2	Basic concepts	517
5.10.3	Ideal filters	519
5.10.4	Design of oceanographic filters	527
5.10.5	Running-mean filters	532
5.10.6	Godin-type filters	535
5.10.7	Lanczos-window cosine filters	536
5.10.8	Butterworth filters	543
5.10.9	Frequency-domain (transform) filtering	551
5.11	Fractals	557
5.11.1	The scaling exponent method	561
5.11.2	The yardstick method	562
5.11.3	Box counting method	563
5.11.4	Correlation dimension	564
5.11.5	Dimensions of multifractal functions	564
5.11.6	Predictability	567

<b>Appendices</b>	<b>569</b>
Appendix A Units in physical oceanography	570
Appendix B Glossary of statistical terminology	572
Appendix C Means, variances and moment-generating functions for some common continuous variables	576
Appendix D Statistical tables	577
Appendix E Correlation coefficients at the 5% and 1% levels of significance for various degrees of freedom $\nu$	585
Appendix F Approximations and nondimensional numbers in physical oceanography	586
Appendix G Convolution	593
