Preface xi

How to use this book – a note to the reader xiii

Procedure for tackling progress test questions xvi

The Greek alphabet xvii

1. **The laws of mechanics** 1
   - 1.1 How it began 1
   - 1.2 Length and time interval 3
   - 1.3 Kinematics, the study of motion 4
   - 1.4 Uniform motion in a straight line and in a circle 7
   - 1.5 Relative motion 9
   - 1.6 Dynamics, the study of what causes motion 10
   - 1.7 The equation of motion 14
   - 1.8 Superposition of forces 16
   - 1.9 Units and dimensions 17
   - 1.10 Energy 18
   - 1.11 Energy diagrams 22
   - 1.12 Problems 24

2. **Space, time and frames of reference** 26
   - 2.1 The nature of time and space 26
   - 2.2 Inertial frames of reference 27
   - 2.3 Real and inertial forces 28
   - 2.4 Co-ordinate transformations 30
   - 2.5 The problem of the ether 32
   - 2.6 Departures from Newtonian mechanics 34
   - 2.7 The relativistic addition law of velocities 34
   - 2.8 Relativistic co-ordinate transformation 36
   - 2.9 The relativistic concept of time 40
   - 2.10 The relativistic concept of length 43
   - 2.11 Relativistic dynamics 43
   - 2.12 The origin of the magnetic field 47
   - 2.13 Problems 50

3.	**Central forces**	52
	3.1 Motion of a point in a plane	52
	3.2 Central conservative forces	54
	3.3 Angular momentum	56
	3.4 Conservation of angular momentum and energy	57
	3.5 The radial equation	60
	3.6 Gravitational attraction	64
	3.7 Gravitational force due to a sphere	68
	3.8 The gravitational field	72
	3.9 The two-body problem	74
	3.10 Problems	78
4.	**Collisions between particles**	81
	4.1 The conservation laws	81
	4.2 Disintegration of a particle	81
	4.3 CM- and LAB-frames	82
	4.4 Elastic collisions	83
	4.5 Elastic collisions at relativistic energies	88
	4.6 Scattering cross-sections	89
	4.7 Scattering by a hard sphere	93
	4.8 Rutherford scattering	93
	4.9 Mean free path in matter	96
	4.10 Problems	97
5.	**Systems of particles**	99
	5.1 Introduction	99
	5.2 Motion of the centre of mass	101
	5.3 Kinetic energy	103
	5.4 Linear momentum	105
	5.5 Angular momentum	106
	5.6 Motion relative to centre of mass	109
	5.7 Problems	110
6.	**Solids**	112
	6.1 Introduction	112
	6.2 The rigid body	112
	6.3 Motion of a rigid body	113
	6.4 Moment of inertia	115
	6.5 Rotation about a fixed axis	119
	6.6 General motion of a rigid body	122
	6.7 Rotating frames of reference	125
	6.8 Deformation in solids	129
	6.9 Problems	131

7. Fluids 134
7.1 Ideal fluids 134
7.2 Pressure in a fluid 134
7.3 Equilibrium of floating bodies 137
7.4 Fluids in motion 138
7.5 Viscous fluids 140
7.6 Problems 143

8. The molecular theory of matter 144
8.1 Introduction 144
8.2 Intermolecular forces 144
8.3 Ideal gases 146
8.4 Excursion into statistics 147
8.5 The pressure of a gas 148
8.6 The concept of temperature 151
8.7 Temperature and kinetic energy 151
8.8 The distribution of velocities in a gas 154
8.9 Polyatomic gases 157
8.10 The specific heats of gases and solids 158
8.11 Problems 161

Revision Test 163

Solutions to problems 172

Index 175
