

CONTENTS

| | |
|-----------------------------------------------------------------------------------------------------|-----|
| Preface | vii |
| Chapter I. Production of Radioactive Indicators | 1 |
| I. General Remarks | 1 |
| II. Preparation of Radiophosphorus | 2 |
| III. Production of Radioarsenic | 6 |
| IV. Production of Tracer Sulfur | 7 |
| V. Production of Radiohalogens | 7 |
| VI. Concentration of Radioelements by Means of an Electric Field | 11 |
| VII. Concentration of Radiometals | 12 |
| VIII. Separation of Nuclear Isomers | 13 |
| IX. Preparation of Tritium (^3H) | 14 |
| X. Production of Tracer Carbon | 14 |
| XI. Production of Radiosodium and Radiopotassium | 15 |
| XII. Production of Tracer Calcium and Strontium | 16 |
| XIII. Preparation of Radioiron and Radiomanganese | 16 |
| A. Production of ^{59}Fe | 16 |
| B. Production of ^{55}Fe | 17 |
| XIV. Preparation of Radiocopper | 18 |
| XV. Preparation of Radiozinc | 18 |
| XVI. Production of Radioactive Inert Gases | 19 |
| Chapter II. Radioactive Isotopes of Possible Interest in Tracer Work | 21 |
| Chapter III. Determination of Radioactivity | 43 |
| I. Measurement of Activity of Radiophosphorus | 43 |
| II. Measurement of Activity of Radiosulfur | 47 |
| III. Measurement of Activity of ^{14}C | 48 |
| IV. Measurement of Activities of ^{55}Fe and ^{59}Fe in the Same Sample | 53 |
| V. Electrolytic Separation of Radioiron | 54 |
| VI. Measurement of Activity of Tritium | 55 |
| VII. Apparatus for Activity Measurements | 55 |
| A. General Remarks | 55 |
| B. The Geiger-Müller Counter | 57 |
| C. Details of Construction | 59 |
| D. Amplifier and Recorder Circuit | 62 |
| E. Scale Circuit and Statistic Analysis | 65 |
| F. Arrangement for Automatic Measurement | 66 |
| G. Micro Counting Arrangement | 69 |
| H. The Glass Counter | 71 |
| VIII. Measurement of Radiation Emitted at Points External to the Body | 74 |
| IX. Accuracy of Counting Measurements | 76 |

| | |
|-------------------------------------------------------------------------------------|-----|
| X. Photographic Technique | 77 |
| XI. Decay of Activity of Radiosodium, Radiopotassium, and Radiophosphorus | 80 |
| Chapter IV. Atomic Interchange | 83 |
| I. General Remarks | 83 |
| II. Exchange of Hydrogen | 86 |
| III. Removal of Radioactive Impurities | 87 |
| Chapter V. Application of Isotopic Indicators in Chemical Analysis | 89 |
| I. Radioactive Control of Precipitate or Filtrate | 89 |
| II. The Method of Isotope Dilution | 91 |
| Chapter VI. Absorption, Distribution, and Excretion of Elements | 95 |
| I. General Remarks | 95 |
| II. Absorption from Intestine | 95 |
| III. Phosphorus | 97 |
| A. Absorption and Excretion | 97 |
| B. Excretion by Human Subjects | 101 |
| C. Origin of Feces Phosphorus | 103 |
| D. Distribution of Radiophosphorus | 106 |
| 1. Distribution in Organs of the Rat | 106 |
| 2. Distribution in Organs of the Mouse | 109 |
| 3. Distribution in the Human | 114 |
| E. Skin Absorption of Tri- <i>o</i> -cresyl Phosphate | 114 |
| F. Uptake of Radiophosphorus by Growing Tissue | 118 |
| G. Deposition of ³² P in Superficial Tissues | 123 |
| H. Uptake of Colloidal Chromium Phosphate by Reticuloendothelial System | 124 |
| I. Phosphorus Uptake by <i>Trichinella</i> and by Insects | 127 |
| J. Uptake by Organs of Bacteria Containing ³² P | 128 |
| IV. Arsenic | 128 |
| V. Sulfur and Selenium | 131 |
| VI. Distribution of Chlorine and Bromine | 132 |
| VII. Organic Compounds Containing Radiobromine | 133 |
| VIII. Iodine | 134 |
| A. General Remarks | 134 |
| B. Distribution | 136 |
| C. Uptake by Rabbit Thyroids | 138 |
| D. Uptake by Human Thyroids | 138 |
| E. Graves' Disease | 141 |
| F. Uptake by Tumor Tissue | 143 |
| G. Application in the Study of Embryologic Development of the Thyroid | 145 |
| H. Storage by <i>Perophora annocetens</i> | 147 |
| IX. Distribution of Astatine | 147 |
| X. Sodium | 150 |

| | |
|-------------------------------------------------------------------------------------------------------------------|-----|
| XI. Potassium | 153 |
| XII. Calcium and Strontium | 154 |
| XIII. Radium | 158 |
| XIV. Lead | 159 |
| XV. Antimony | 162 |
| XVI. Bismuth | 163 |
| XVII. Polonium | 163 |
| XVIII. Thorium | 165 |
| XIX. Plutonium | 165 |
| XX. Iron | 167 |
| A. Distribution in Tissues of Dogs | 167 |
| B. Distribution in Tissues of Rats and Rabbits | 170 |
| C. Distribution in the Tissue of Pups | 171 |
| D. Plasma Iron | 173 |
| E. Uptake by Human Beings | 173 |
| F. Mechanism of Iron Absorption | 176 |
| G. Formation of Ferritin | 177 |
| H. Tubular Reabsorption Rate | 179 |
| XXI. Cobalt and Manganese | 179 |
| XXII. Copper | 182 |
| XXIII. Gold | 184 |
| XXIV. Zinc | 185 |
| XXV. Inert Gases | 187 |
| XXVI. Air-Borne Fission Products | 188 |
| Chapter VII. Application of Isotopic Indicators in the Study of Permeability of Phase Boundaries | 191 |
| I. General Remarks | 191 |
| II. Rate of Ion Passage through Capillary Wall | 191 |
| III. Permeability Studies with Heavy Water | 197 |
| IV. Determination of Total Body Water by Use of Radioactive Hydrogen | 200 |
| V. Determination of the Extracellular Phase | 201 |
| A. The Chloride Space | 201 |
| B. The Bromide Space | 203 |
| C. The Sodium Space | 204 |
| D. Determination of the Extracellular Fluid of the Organism | 210 |
| E. Apparent Extracellular Volume | 212 |
| VI. Determination of Circulation Time | 213 |
| VII. Application of Radiosodium in the Study of Pulmonary Resuscitative Procedures | 215 |
| VIII. Permeability of the Stomach Wall | 216 |
| IX. Movement of Water and Ions between Intestine and Blood | 216 |
| X. Permeability of the Blood — Cerebrospinal Fluid Barrier | 217 |
| XI. Penetration into the Aqueous Humor | 217 |
| XII. Permeability of the Placenta | 218 |
| XIII. Absorption from the Vagina | 220 |
| XIV. Rate of Penetration of Potassium into Tissue Cells | 220 |

| | |
|-------------------------------------------------------------------------------------------------------------------------|-----|
| XV. Effect of Muscular Exercise on Potassium Interchange | 225 |
| XVI. Rate of Penetration of Sodium into Tissue Cells | 227 |
| XVII. Study of the Influence of the Neurohypophyseal Principles on the Sodium Metabolism in the Axolotl | 229 |
| XVIII. Permeability of Yeast Cells to Potassium | 231 |
| XIX. Effect of Irradiation on Permeability of Yeast Cells to Potassium | 233 |
| XX. Rate of Penetration of Bicarbonate into Tissue Cells | 234 |
| XXI. Rate of Penetration of Phosphate into Tissue Cells | 234 |
| XXII. Effect of Muscular Exercise on Phosphate Interchange | 240 |
| XXIII. Streamline Flow of Blood into Liver as Shown by Application of Radiophosphorus | 241 |
| XXIV. Interaction between Phosphate of Yeast Cells and Nutrient Solution | 241 |
| A. General Remarks | 241 |
| B. Amount of Labeled Phosphorus Penetrating from Cells into Nutrient Solution | 242 |
| C. Effect of Röntgen Rays on Permeability of Yeast | 242 |
| D. Effect of Ultraviolet Radiation on Extrusion of ^{32}P by Yeast | 244 |
| XXV. Permeability of Capillaries to Colloids | 245 |
| Chapter VIII. Turnover Studies | 247 |
| I. Specific Activity and Rate of Renewal | 247 |
| A. Concept of Specific Activity | 247 |
| B. Concept of Rate of Renewal | 247 |
| C. Calculation of Turnover of Substance Introduced into the Circulation | 250 |
| D. General Case of Calculation of Turnover Rate | 252 |
| E. Calculation of Intermediate Carbon Dioxide Production on Basis of Dilution of Added Labeled Carbon Dioxide | 253 |
| II. Turnover of Phosphorus-Containing Carbohydrates | 255 |
| A. Rate of Renewal of Labile Phosphorus Compounds of Muscle Tissue | 255 |
| B. Effect of Insulin on Phosphorus Turnover in Muscle | 261 |
| C. Turnover of Acid-Soluble Phosphorus in the Liver | 262 |
| D. Effect of Insulin on Turnover of Acid-Soluble Phosphorus | 267 |
| E. Experiments <i>in vitro</i> on Rate of Renewal of Adenosine Triphosphate | 268 |
| F. Effect of Hyperthyroidism on Turnover Rate | 270 |
| G. Phosphorus Metabolism in Brain | 272 |
| H. Application of Radiophosphorus in Studies on Metabolism of the Sexual Cycle | 272 |
| III. Turnover of Phosphatides | 274 |
| A. General Remarks | 274 |
| B. Purification of Phosphatides | 280 |
| Separation of Choline-Containing and Non-Choline-Containing Phosphatides | 280 |
| C. Effect of Ingested Fat on Rate of Renewal | 282 |
| D. Relative Speed of Formation of Various Phosphatides | 285 |
| E. Effect of Lipotropic Substances on Phosphatide Turnover in Liver | 286 |
| F. Turnover in Kidney | 290 |
| G. Turnover in Muscles | 291 |

| | |
|-------------------------------------------------------------------------------------------------------|-----|
| H. Turnover in Brain | 293 |
| I. Adrenal Glands and Phosphatide Formation | 295 |
| J. Turnover in Neoplastic Tissue | 295 |
| K. Turnover in Blood | 296 |
| L. Phosphatide Formation in Tissue Slices | 297 |
| M. Path of Conversion of Inorganic Phosphate to Phosphatide | 302 |
| N. Rate of Interchange of Plasma Phosphatides with Tissue Phosphatides | 303 |
| O. Passage of Phosphatides into Lymphatic Channels | 305 |
| P. Origin of Plasma Phosphatides | 306 |
| Q. Study of Lecithinemia | 309 |
| R. Origin of Phosphatides and Other Phosphorus Compounds of Yolk | 310 |
| S. Effect of Diethylstilbestrol on Turnover of Phosphatides | 314 |
| T. Turnover of Vitellin | 315 |
| U. Origin of Phosphatides in Chick Embryo | 317 |
| V. Origin of Milk Phosphatides | 318 |
| W. Turnover of Phosphatides in Cell Nuclei. Effect of Röntgen Rays on Phosphatide Turnover | 319 |
| X. Application of Indicators Other than Radiophosphorus in Study of Phosphatide Metabolism | 321 |
| 1. Incorporation of Deuterium-Containing Fatty Acids | 321 |
| 2. Change in Degree of Unsaturation of Fatty Acids | 322 |
| 3. Incorporation of Iodinated Fatty Acids | 323 |
| 4. Incorporation of Elaidic Acid | 323 |
| 5. Incorporation of Fatty Acids with a Characteristic Absorption Spectrum | 324 |
| 6. Incorporation of Heavy Nitrogen (^{15}N) in Phosphatides | 324 |
| 7. Incorporation into Phosphatides of Analogs of Choline in Which Arsenic Replaces Nitrogen | 325 |
| IV. Turnover of Nucleic Acids | 325 |
| A. Turnover of Desoxyribonucleic Acid | 325 |
| B. Effect of Röntgen Rays on Turnover of Desoxyribonucleic Acid | 330 |
| C. Rate of Renewal of Ribonucleic Acid | 334 |
| D. Specific Activity of Nucleic Acid Phosphorus of the Whole Rat | 335 |
| V. Phosphorus Turnover in Cell Nuclei | 338 |
| VI. Phosphorus Turnover in Leukemic Tissue | 342 |
| VII. Intravenous Transfer of ^{32}P from Chromatin to Hepatic Tissue | 343 |
| VIII. Phosphorus Turnover in Yeast | 346 |
| IX. Studies of Virus Reproduction | 347 |
| X. Dynamic State of Body Constituents | 348 |
| XI. Turnover of Sulfur Compounds | 349 |
| A. Fate of Elementary Sulfur Fed to Rats | 349 |
| B. Fate of Sulfur Fed as Sodium Sulfide to Rats | 350 |
| C. Rate of Replacement of Protein Sulfur | 351 |
| D. Fate of Plasma Proteins Tagged with Radioactive Sulfur | 354 |
| E. Uptake of Labeled Sulfur by Proteins of Liver Slices | 357 |
| F. Thiamin Metabolism in Man | 358 |

| | |
|--------------------------------------------------------------------------------------------------------------|------------|
| G. Fate of Mustard Gas, the Sulfone, and the Sulfoxide in the Animal Body | 359 |
| XII. Role of Iodine in Thyroid Metabolism. Turnover of Diiodotyrosine and Thyroxine | 363 |
| A. Formation of Labeled Diiodotyrosine and Thyroxine | 363 |
| B. Formation of Protein-Bound Iodine of the Plasma | 364 |
| C. Role of Anterior Pituitary in Iodine Metabolism | 365 |
| 1. The Hypophysectomized Animal | 365 |
| 2. The Animal Treated with Thyrotropic Hormone | 367 |
| D. Effect of Thiocyanate and Thiouracil | 369 |
| E. Formation of Diiodotyrosine and Thyroxine in Thyroidectomized Animals | 371 |
| F. Formation of Diiodotyrosine and Thyroxine in Tissue Slices | 372 |
| G. Fate of Injected Labeled Thyroxine | 376 |
| XIII. Turnover of Carbon Compounds | 377 |
| A. General Remarks | 377 |
| B. Formation of Glycogen | 380 |
| 1. Administration of Labeled Lactate | 380 |
| 2. Administration of Labeled Bicarbonate | 384 |
| 3. Administration of Labeled Fatty Acids | 385 |
| C. Production of Glycogen in Liver Slices | 387 |
| D. Carbon Dioxide Fixation in Cell-Free Extracts of Pigeon Liver | 388 |
| E. Rate of Renewal of Glycogen | 390 |
| F. Origin of Bicarbonate of Pancreatic Juice | 392 |
| G. Elimination of Carbon Monoxide from the Human Body | 392 |
| H. Assimilation of Carbon Dioxide by Yeast | 393 |
| I. Methane Formation | 393 |
| J. Synthesis of Carbon Compounds by Bacteria | 394 |
| K. Carbon Dioxide Utilization in the Synthesis of Acetic Acid by <i>Clostridium thermoaceticum</i> | 395 |
| L. Carbon Dioxide Utilization in the Synthesis of Acids by <i>Butyribacterium rettgeri</i> | 396 |
| M. Synthesis of Butyric and Caproic Acids by <i>Clostridium kluyveri</i> | 397 |
| N. Role of Carbon Dioxide in the Metabolism of Unicellular Organisms Other Than Bacteria | 398 |
| O. Distribution of Labeled Tyrosine in Rats and Mice | 398 |
| P. Precursor of Adrenaline | 400 |
| Chapter IX. Path of Intermediary Reactions | 403 |
| I. Application of Labeled Phosphate in the Study of Intermediary Reactions in Glycolysis | 403 |
| A. Effect of Cozymase on the Interchange between Inorganic and Creatine Phosphate | 404 |
| B. Transfer of Phosphate Groups | 404 |
| C. Exchangeability of Cozymase Phosphate | 405 |
| D. Conversion of β -Glycerophosphoric Acid into the α Form | 406 |
| II. Conversion of Prothrombin to Thrombin | 406 |

| | |
|-------------------------------------------------------------------------------------------------------------------|------------|
| III. Exchange between Inorganic and Acetyl-Bound Phosphate | 407 |
| IV. Application of Labeled Sulfur | 408 |
| A. Origin of Hydrogen Sulfide Produced by Action of Sulfur on Thiols | 408 |
| B. Enzymic Formation of Cysteine | 408 |
| Chapter X. Skeleton Metabolism | 409 |
| I. General Remarks | 409 |
| II. Distribution of Labeled Phosphorus in the Incisors of the Rat | 410 |
| III. Uptake of Labeled Phosphorus by Organs of Rats Raised on a Phosphorus-Deficient Diet | 413 |
| IV. Variation of Mineral Content of the Skeleton with Age | 413 |
| V. Adsorption Studies on Powdered Bone | 414 |
| VI. Rate of Renewal of the Skeleton | 415 |
| A. Experiments of Short Duration | 415 |
| B. Experiments of Long Duration | 417 |
| VII. Biological Recrystallization | 421 |
| VIII. Mobilization of the Mineral Constituents of Hen Skeleton | 422 |
| IX. Migration of Phosphate from Soft Tissues to the Skeleton | 423 |
| X. Uptake of ^{32}P by the Human Skeleton | 425 |
| XI. Rate of Renewal of Fish Skeleton | 425 |
| XII. Uptake of ^{32}P by Dentine and Enamel | 426 |
| XIII. Effect of Vitamin D on Deposition of Phosphorus in Rachitic Metaphysis | 428 |
| XIV. Effect of Röntgen Rays on ^{32}P Uptake by Bone | 432 |
| XV. Rate of Replacement of Bone Calcium | 433 |
| XVI. Uptake of Radium and Lead | 435 |
| XVII. Uptake of Sodium, Potassium, and Zinc | 437 |
| XVIII. Fluoride Content and Rate of Renewal of the Skeleton | 438 |
| XIX. Deposition of Radiocarbon in Bone | 440 |
| XX. Uptake of Fission Products and Plutonium by the Skeleton | 441 |
| Chapter XI. Application of Radioactive Indicators in the Study of Red Corpuscles | 445 |
| I. General Remarks | 445 |
| II. Turnover of Phosphorus in Red Corpuscles | 445 |
| A. Experiments of Short Duration | 445 |
| B. Experiments of Long Duration | 449 |
| C. Nucleated Corpuscles | 451 |
| D. Formation of Labeled Acid-Soluble Phosphorus Compounds in Blood Hemolyzates | 452 |
| E. Effect of Poisons on Enzymes Responsible for Synthesis of Organic Phosphorus Compounds in Corpuscles | 454 |
| F. Rate of Renewal of Phosphatides | 455 |
| G. Rate of Renewal of Nucleic Acids | 457 |
| III. Permeability of Red Corpuscles to Phosphate | 458 |
| A. General Remarks | 458 |
| B. Penetration of Phosphate into Corpuscles of Human Subjects | 460 |

| | |
|-------------------------------------------------------------------------------------------------------------|-------------------|
| C. Penetration of Phosphate into Nucleated Corpuscles | 462 |
| D. Penetration of Hexose Monophosphate | 462 |
| E. Effect of Temperature on Rate of Penetration of Phosphate into Red Corpuscles | 463 |
| IV. Retention of Radiophosphorus by Human Blood | 465 |
| V. Distribution of Radiophosphorus in Leukemic Blood | 467 |
| VI. Application of Red Corpuscles Containing Radiophosphorus | 469 |
| A. General Remarks | 469 |
| B. Determination of Circulating Red Cell Volume | 469 |
| C. Red Corpuscle Content of the Legs. | 473 |
| D. Red Corpuscle Content of the Lung | 473 |
| E. Study of Residual Blood Content of the Heart | 474 |
| F. Effect of Orthostatism and Shock on Circulation Velocity | 477 |
| G. Permeability of the Placenta | 477 |
| VII. Life Cycle of Red Corpuscles of the Hen | 479 |
| VIII. Arsenic and Sulfur | 481 |
| IX. Halogens | 482 |
| X. Sodium and Potassium | 483 |
| A. General Remarks | 483 |
| B. Rate of Penetration of Labeled Potassium into Red Corpuscles | 486 |
| C. Rate of Penetration of Labeled Sodium into Red Corpuscles | 490 |
| XI. Iron | 491 |
| A. General Considerations | 491 |
| B. Determination of Circulating Corpuscle Volume by Use of Red Corpuscles Containing Radioiron | 492 |
| C. Determination of Circulating Red Corpuscle Volume in Humans | 495 |
| D. Distribution of Red Corpuscles in Large and Minute Vessels | 499 |
| E. Survival of Preserved Human Erythrocytes Stored as Whole Blood | 501 |
| F. Metabolism of Inorganic and Hemoglobin Iron | 503 |
| G. Radioiron in the Fetal Circulation | 503 |
| H. Problem of the Life Cycle of the Red Corpuscles | 503 |
| I. Age of Erythrocytes Invaded by Malarial Parasites | 505 |
| XII. Copper, Cobalt, Zinc, and Lead | 506 |
| Chapter XII. Shortcomings of Radioactive Indicators | 507 |
| I. General Remarks | 507 |
| II. Chemical Nonidentity of Isotopes | 507 |
| III. Noxious Effects of the Radiation Emitted by Radioactive Indicators | 510 |
| Author Index | 517 |
| Subject Index | 528 |
| Segré Isotope Chart | Inside back cover |
