

CONTENTS

Preface	iii
Editor's Note	v
W. F. VINEN	
The Scattering of Light by Superfluid Helium	
1. Introduction	1
2. Brillouin and Rayleigh scattering from an ordinary simple liquid	2
3. Brillouin scattering from the superfluid phase of pure ^4He	5
4. Light scattering from a superfluid ^3He - ^4He mixture	10
5. Scattering near the λ -point	11
6. Raman scattering from superfluid ^4He	18
Acknowledgements	20
Appendix: Theory of the scattering of light by a superfluid ^3He - ^4He mixture	20
References	25
Thomas J. GREYTAK	
Raman Scattering from Elementary Excitations in Liquid Helium	
1. Introduction	27
2. Elementary Excitations in Superfluid Helium	27
3. Light Scattering from Liquid Helium	31
4. Evidence for a Two-Roton Bound State	38
5. Summary and Conclusions	42
References	43
A. C. ANDERSON	
The Fermi Liquids He^3 and He^3 - He^4	
1. Introduction	44
2. Liquid He^3	44
3. Solutions of He^3 in He^4	63
4. Summary	73
References	74
P. C. HOHENBERG	
Hydrodynamics of Systems with Broken Symmetry	
1. Introduction	77
2. Macroscopic Theories	78
2.1 Pure Helium	78
2.2 Helium in Pores	80
2.3 The Planar Ferromagnet	81
2.4 The Isotropic Antiferromagnet	83
3. Microscopic Description of Liquid Helium	85
3.1 Phenomenological Theory	85
3.2 Microscopic Theory	86
3.3 Ultrasonic Propagation in Liquid Helium at Low Temperatures	87

Contents

4. Microscopic Theory for the Antiferromagnet	90
References	94
Toshio TSUZUKI	
Temperature-Green-Function Method for the Fluctuation Superconductivity	
1. Introduction	96
2. Critical Fluctuations	97
3. Formulation of the Nonlinear Response	101
4. Excess Current in the GLG Approximation	103
5. Excess Conductivity	106
5.1 Static Limit	106
5.2 Frequency Dependence	108
6. Magnetic Field Effect	109
6.1 Diamagnetic Susceptibility	109
6.2 Magneto-conductivity	111
7. Discussions and Concluding Remarks	112
Acknowledgements	115
References	115
Kazumi MAKI	
Dynamical Properties of Kulik's Vortex State	
1. Introduction	117
2. The Time Dependent Ginzburg Landau Equations	118
3. Kulik's Vortex State	119
3.1 Approximate solutions	121
3.2 Nucleation field	123
3.3 Damping constants of excited states	124
4. Electromagnetic Response	125
4.1 Longitudinal case ($E_\omega // 0x$)	125
4.2 Transverse case ($E_\omega // 0y$)	128
5. Surface Impedance	129
5.1 Longitudinal case	129
5.2 Transverse case	131
5.3 Perpendicular case	132
6. Relation between TDGL and the linear response theory	134
7. Conclusion	137
Acknowledgements	138
References	138
