Contents

PREFACE v

BIBLIOGRAPHICAL NOTE vii

PART I. MATHEMATICS 1

Chapter I. Mathematical Logic, Axiomatics 3
1. Relations and their Combination, Structure of Propositions
2. The Constructive Mathematical Definition
3. Logical Inference
4. The Axiomatic Method

Chapter II. Number and Continuum, the Infinite 30
5. Rational Numbers and Complex Numbers
6. The Natural Numbers
7. The Irrational and the Infinitely Small
8. Set Theory
9. Intuitive Mathematics
10. Symbolic Mathematics
11. On the Character of Mathematical Cognition

Chapter III. Geometry 67
12. Non-Euclidean, Analytic, Multi-dimensional, Affine, Projective Geometry; the Color Space
13. The Problem of Relativity
14. Congruence and Similarity. Left and Right
15. Riemann's Point of View. Topology

PART II. NATURAL SCIENCE 93

Chapter I. Space and Time, the Transcendental External World 95
16. The Structure of Space and Time in their Physical Effectiveness
17. Subject and Object (The Scientific Implications of Epistemology)
18. The Problem of Space

Chapter II. Methodology 139
19. Measuring
20. Formation of Concepts
21. Formation of Theories

Chapter III. The Physical Picture of the World 165
22. Matter
23. Causality (Law, Chance, Freedom)

APPENDICES 219
Appendix A: The Structure of Mathematics 219
Appendix B: Ars Combinatoria 237
Appendix C: Quantum Physics and Causality 253
Appendix D: Chemical Valence and the Hierarchy of Structures 266
Appendix E: Physics and Biology 276
Appendix F: The Main Features of the Physical World; Morphe and Evolution 285
INDEX 302
