

CONTENTS

PREFACE		viii
INTRODUCTION		3
I. STOCHASTIC DIFFERENTIAL EQUATIONS AND RELATED TOPICS		16
§1.1 Preliminaries		16
§1.2 The Wiener measure		19
§1.3 Stochastic differential equations		43
§1.4 Markov processes and semi-groups of operators		56
§1.5 Measures in the space of continuous functions corresponding to diffusion processes		73
§1.6 Diffusion processes with reflection		83
§1.7 Limit theorems. Action functional		96
II. REPRESENTATION OF SOLUTIONS OF DIFFERENTIAL EQUATIONS AS FUNCTIONAL INTEGRALS AND THE STATEMENT OF BOUNDARY VALUE PROBLEMS		117
§2.1 The Feynman-Kac formula for the solution of Cauchy's problem		117
§2.2 Probabilistic representation of the solution of Dirichlet's problem		126
§2.3 On the correct statement of Dirichlet's problem		137
§2.4 Dirichlet's problem in unbounded domain		147
§2.5 Probabilistic representation of solutions of boundary problems with reflection conditions		166
III. BOUNDARY VALUE PROBLEMS FOR EQUATIONS WITH NON-NEGATIVE CHARACTERISTIC FORM		184
§3.1 On peculiarities in the statement of boundary value problems for degenerate equations		184
§3.2 On factorization of non-negative definite matrices		188
§3.3 The exit of process from domain		194
§3.4 Classification of boundary points		204
§3.5 First boundary value problem. Existence and uniqueness theorems for generalized solutions		219
§3.6 The Hölder continuity of generalized solutions. Existence conditions for derivatives		230
§3.7 Second boundary value problem		253

IV. SMALL PARAMETER IN SECOND-ORDER ELLIPTIC DIFFERENTIAL EQUATIONS	264
§4.1 <i>Classical case. Problem statement</i>	264
§4.2 <i>The generalized Levinson conditions</i>	278
§4.3 <i>Averaging principle</i>	293
§4.4 <i>Leaving a domain at the expense of large deviations</i>	309
§4.5 <i>Large deviations. Continuation</i>	332
§4.6 <i>Small parameter in problems with mixed boundary conditions</i>	342
V. QUASI-LINEAR PARABOLIC EQUATIONS WITH NON-NEGATIVE CHARACTERISTIC FORM	352
§5.1 <i>Generalized solution of Cauchy's problem. Local solvability</i>	352
§5.2 <i>Solvability in the large at the expense of absorption. The existence conditions for derivatives</i>	356
§5.3 <i>On equations with subordinate non-linear terms</i>	366
§5.4 <i>On a class of systems of differential equations</i>	381
§5.5 <i>Parabolic equations and branching diffusion processes</i>	390
VI. QUASI-LINEAR PARABOLIC EQUATIONS WITH SMALL PARAMETER. WAVE FRONT PROPAGATION	395
§6.1 <i>Statement of problem</i>	395
§6.2 <i>Generalized KPP equation</i>	403
§6.3 <i>Some remarks and refinements</i>	429
§6.4 <i>Other forms of non-linear terms</i>	438
§6.5 <i>Other kinds of random movements</i>	447
§6.6 <i>Wave front propagation due to non-linear boundary effects</i>	459
§6.7 <i>On wave front propagation in a diffusion-reaction system</i>	466
VII. WAVE FRONT PROPAGATION IN PERIODIC AND RANDOM MEDIA	478
§7.1 <i>Introduction</i>	478
§7.2 <i>Calculation of the action functional</i>	481
§7.3 <i>Asymptotic velocity of wave front propagation in periodic medium</i>	488
§7.4 <i>Kolmogorov-Petrovskii-Piskunov equation with random multiplication coefficient</i>	498
§7.5 <i>The definition and basic properties of the function $\mu(z)$</i>	500
§7.6 <i>Asymptotic wave front propagation velocity in random media</i>	514
§7.7 <i>The function $\mu(z)$ and the one-dimensional Schrödinger equation with random potential</i>	525

LIST OF NOTATIONS	531
