

Contents

1	Introduction	1
1.1	Fokker–Planck Equations	1
1.1.1	Brownian Particles and Langevin Equations	1
1.1.2	Many-Body Systems and Mean Field Theory	2
1.2	Phase Transitions and Self-Organization	3
1.3	Stochastic Feedback	5
1.4	Applications	7
1.4.1	Collective Phenomena	7
1.4.2	Multistable Systems	7
1.4.3	Power Law and Cut-Off Distributions	10
1.4.4	Free Energy Systems	12
1.4.5	Anomalous Diffusion	15
1.5	Overview	16
2	Fundamentals	19
2.1	Stochastic Processes	19
2.2	Nonlinear Fokker–Planck Equation	20
2.2.1	Notation	21
2.2.2	Stratonovich Form	21
2.2.3	Transient Solutions	22
2.2.4	Continuity Equation	22
2.2.5	Boundary Conditions	23
2.2.6	Stationary Solutions	23
2.3	Self-Consistency Equations	24
2.4	Multistability and Basins of Attraction	25
2.5	Nonlinearity Dimension	25
2.6	Classifications	26
2.7	Derivations	28
2.8	Numerics	28
2.8.1	Path Integral Solutions	28
2.8.2	Fourier and Moment Expansions	29
2.8.3	Finite Difference Schemes	29
2.8.4	Distributed Approximating Functionals	30

3	Strongly Nonlinear Fokker–Planck Equations	31
3.1	Transformation to a Linear Problem	31
3.2	What Are Strongly Nonlinear Fokker–Planck Equations?	33
3.3	Correlation Functions	36
3.4	Langevin Equations	36
3.4.1	Two-Layered Langevin Equations	36
3.4.2	Self-Consistent Langevin Equations	38
3.4.3	Hierarchies and Correlation Functions	39
3.4.4	Numerics	39
3.5	Stationary Solutions	42
3.6	H-Theorem for Stochastic Processes	43
3.7	Nonlinear Families of Markov Processes*	46
3.7.1	Linear Versus Nonlinear Families of Markov Processes	46
3.7.2	Linear Families of Markov Processes	47
3.7.3	Nonlinear Families of Markov Diffusion Processes	48
3.7.4	Markov Embedding	50
3.7.5	Hitchhiker Processes	50
3.8	Top-Down Versus Bottom-Up Approaches*	52
3.9	Transient Solutions and Transition Probability Densities	55
3.9.1	Nonequivalence of Transient Solutions and Transition Probability Densities	55
3.9.2	Gaussian Distributions*	57
3.9.3	Purely Random Processes	61
3.9.4	Wiener Processes	62
3.9.5	Ornstein–Uhlenbeck Processes	62
3.9.6	Transient Solutions: Two Examples	63
3.10	Shimizu–Yamada Model – Transient Solutions	66
3.11	Fluctuation–Dissipation Theorem	70
4	Free Energy Fokker–Planck Equations	73
4.1	Free Energy Principle	75
4.2	Maximum Entropy Principle and Relationship between Noise Amplitude and Temperature	76
4.3	H-Theorem for Free Energy Fokker–Planck Equations	77
4.4	Boltzmann Statistics	79
4.5	Linear Nonequilibrium Thermodynamics	80
4.5.1	Derivation of Free Energy Fokker–Planck Equations	80
4.5.2	Drift and Diffusion Coefficients	84
4.5.3	Transition Probability Densities and Langevin Equations	86
4.5.4	Density Functions	87
4.5.5	Entropy Production and Conservative Force	87
4.5.6	Stationary Solutions	88
4.5.7	H-Theorem for Systems with Conservative Forces and Nontrivial Mobility Coefficients	89

4.6	Canonical-Dissipative Systems	90
4.6.1	Linear Case	90
4.6.2	Nonlinear Case	92
4.7	Boundedness of Free Energy Functionals*	96
4.7.1	Distortion Functionals	97
4.7.2	Kullback Measure and Entropy Inequality	97
4.7.3	Generic Cases and Schrödiger's Decomposition of Kullback Measures	100
4.8	First, Second, and Third Choice Thermostatistics	107
5	Free Energy Fokker–Planck Equations with Boltzmann Statistics	109
5.1	Stability Analysis	110
5.1.1	Lyapunov's Direct Method	112
5.1.2	Linear Stability Analysis	113
5.1.3	Self-Consistency Equation Analysis	115
5.1.4	Shiino's Decomposition of Perturbations	118
5.1.5	Generic Cases	120
5.1.6	Higher-Dimensional Nonlinearities	126
5.1.7	Multiplicative Noise	130
5.1.8	Norm for Perturbations*	132
5.2	Natural Boundary Conditions	134
5.2.1	Shimizu–Yamada Model – Stationary Solutions	135
5.2.2	Dynamical Takatsuji Model – Basins of Attraction	140
5.2.3	Desai–Zwanzig Model	148
5.2.4	Bounded $B(M_1)$ -Model	152
5.3	Periodic Boundary Conditions	155
5.3.1	Cluster Amplitude and Cluster Phase	156
5.3.2	KSS Model – Cluster Amplitude Dynamics	157
5.3.3	Mean Field HKB Model – Cluster Phase Dynamics	167
5.4	Characteristics of Bifurcations	183
5.4.1	Stability and Disorder	183
5.4.2	Emergence of Collective Behavior	184
5.4.3	Multistability and Symmetry	186
5.4.4	Continuous and Discontinuous Phase Transitions	187
5.5	Applications	188
5.5.1	Ferromagnetism	188
5.5.2	Synchronization	191
5.5.3	Isotropic-nematic Phase Transitions and Maier–Saupe Model	195
5.5.4	Muscular Contraction	202
5.5.5	Network Models for Group Behavior	206
5.5.6	Multistable Perception-Action Systems	209

6	Entropy Fokker–Planck Equations	213
6.1	Existence and Uniqueness of Stationary Solutions*	215
6.2	Entropy Increase and Anomalous Diffusion	218
6.2.1	Entropy Increase	218
6.2.2	Anomalous Diffusion	219
6.3	Drift- and Diffusion Forms	222
6.4	Entropy and Information Measures	224
6.4.1	Properties*	224
6.4.2	Examples	231
6.5	Examples and Applications	246
6.5.1	Porous Medium Equation	246
6.5.2	${}^T S_q$ -Entropy Fokker–Planck Equation	250
6.5.3	Sharma–Mittal Entropy Fokker–Planck Equation	261
6.5.4	Fokker–Planck Equations for Fermions and Bosons	280
6.5.5	Multivariate Generalizations	284
6.5.6	Metal Electron Model, Black Body Radiation Model, and Planck’s Radiation Formula	288
6.5.7	Population Dynamics	296
7	General Nonlinear Fokker–Planck Equations	299
7.1	Linear Stability Analysis	299
7.1.1	Stationary Solutions	299
7.1.2	Stability of Stationary Solutions	300
7.1.3	On an Additional Stability Coefficient*	305
7.2	Free Energy and Lyapunov Functional Analysis	306
7.2.1	Moving Frame Transformations	306
7.2.2	Derivation of Entropy and Information Measures	310
7.2.3	Derivation of Local Lyapunov Functionals	312
7.2.4	Derivation of Lyapunov Functionals	317
7.3	Examples	324
7.3.1	Traveling Waves	324
7.3.2	Reentrant Noise-Induced Phase Transitions	329
7.3.3	Systems with Multistable Variability	332
7.4	Applications	341
7.4.1	Landau Form and Plasma Particles	341
7.4.2	Bunch-Particle Distributions of Particle Beams	342
7.4.3	Noise Generator	349
7.4.4	Accuracy-Flexibility Trade-Off	351
7.5	Bibliographic Notes	360
8	Epilogue	367
