

## CONTENTS

CONTRIBUTORS . . . . .	vii
PREFACE . . . . .	ix
FUTURE CONTRIBUTIONS . . . . .	xi

### **Circulant Matrix Representation of Feature Masks and Its Applications**

RAE-HONG PARK AND BYUNG HO CHA

I. Introduction . . . . .	2
II. Mathematical Preliminaries . . . . .	3
III. Edge and Feature Detection in the DFT Domain . . . . .	12
IV. Advanced Topics . . . . .	43
V. Conclusions . . . . .	65
References . . . . .	67

### **Phase Problem and Reference-Beam Diffraction**

QUN SHEN

I. Introduction and Overview . . . . .	70
II. Phase-Sensitive Diffraction Theory . . . . .	74
III. Geometry and Symmetry Considerations . . . . .	80
IV. Experiment Procedure and Examples . . . . .	85
V. Retrieval of Individual Phases . . . . .	99
VI. Discussion and Conclusions . . . . .	106
References . . . . .	109

### **Fractal Encoding**

DOMENICO VITULANO

I. Introduction . . . . .	113
II. Fractals Catch Natural Information . . . . .	115
III. Improving the Classical Fractal Transform . . . . .	127

IV. Fractals Meet Other Coding Transforms . . . . .	164
V. Conclusions . . . . .	169
Appendix: Another Way of Fractal Encoding: Bath Fractal Transform . . . . .	169
References . . . . .	170

**Morphologically Debiased Classifier Fusion: A  
Tomography-Theoretic Approach**  
DAVID WINDRIDGE

I. Introduction . . . . .	182
II. Methodology of Tomographic Classifier Fusion . . . . .	190
III. Postcombination Tomographic Filtration . . . . .	220
IV. An Example Application . . . . .	235
V. Dimensionality Issues: Empirical and Theoretical Constraints on the Relative Performance of Tomographic Classifier Fusion . . . . .	244
VI. Morphology-Centered Classifier Combination: Retrospect, Prospect . . . . .	261
References . . . . .	265
