## Part I Fundamental Plasma Physics

---

### 1 Basics of Plasma Physics

<i>U. Schumacher</i> .....	3
1.1 Definition, Occurrence and Typical Parameters of Plasmas .....	3
1.2 Ideal Plasmas .....	5
1.3 Important Plasma Properties .....	7
1.3.1 Debye Shielding .....	7
1.3.2 The Plasma Parameter .....	8
1.3.3 Landau Length .....	8
1.3.4 Plasma Frequency .....	9
1.4 Single Particle Behavior in Plasmas .....	10
1.4.1 Coulomb Collisions, Collision Times and Lengths .....	11
1.4.2 Electrical Conductivity of Plasmas .....	14
1.4.3 Single Charged Particle Motion in Electric and Magnetic Fields .....	15
1.5 Kinetic Description .....	19
References .....	20

### 2 Waves in Plasmas

<i>A. Piel</i> .....	21
2.1 Introduction .....	21
2.2 Dispersion Relation for Waves in a Fluid Plasma .....	22
2.2.1 Maxwell's Equations .....	22
2.2.2 The Equation of Motion .....	22
2.2.3 Normal Modes .....	23
2.2.4 The Dielectric Tensor .....	23
2.2.5 Phase and Group Velocity .....	24
2.3 Waves in Unmagnetized Plasmas .....	24
2.3.1 Transverse Waves .....	25
2.3.2 Longitudinal Waves .....	31
2.3.3 Electron Beam Driven Waves .....	35
2.4 Waves in Magnetized Plasmas .....	37
2.4.1 Propagation Along the Magnetic Field .....	39
2.4.2 Cut-Offs and Resonances .....	40
2.4.3 Propagation Across the Magnetic Field .....	43
2.5 Concluding Remarks .....	47
References .....	48

### 3 An Introduction to Magnetohydrodynamics (MHD), or Magnetic Fluid Dynamics

<i>B.D. Scott</i> .....	51
3.1 What MHD Is .....	51
3.2 The Ideas of Fluid Dynamics .....	52
3.2.1 The Density in a Changing Flow Field – Conservation	52

	of Particles .....	52
3.2.2	The Advective Derivative and the Co-moving Reference Frame .....	54
3.2.3	Forces on the Fluid – How the Velocity Changes .....	55
3.2.4	Thermodynamics of an Ideal Fluid – How the Temperature Changes .....	57
3.2.5	The Composite Fluid Plasma System .....	58
3.3	From Many to One – the MHD System .....	59
3.3.1	The MHD Force Equation .....	60
3.3.2	Treating Several Ion Species .....	60
3.3.3	The MHD Kinematic Equation .....	61
3.3.4	MHD at a Glance .....	62
3.4	The Flux Conservation Theorem of Ideal MHD .....	62
3.4.1	Proving Flux Conservation .....	62
3.4.2	Magnetic Flux Tubes .....	64
3.5	Dynamics, or the Wires-in-Molasses Picture of MHD .....	64
3.5.1	Magnetic Pressure Waves .....	65
3.5.2	Alfvén Waves: Magnetic Tension Waves .....	67
3.6	The Validity of MHD .....	68
3.6.1	Characteristic Time Scales of MHD .....	68
3.6.2	Checking the Assumptions .....	69
3.6.3	A Comment on the Plasma Beta .....	70
3.7	Parallel Dynamics and Resistivity, or Relaxing the Ideal Assumption .....	71
3.8	Towards Multi-Fluid MHD .....	73
3.9	Further Reading .....	73
	References .....	74

## 4 Physics of “Hot” Plasmas

	<i>H. Zohm</i> .....	75
4.1	What is a Hot Plasma? .....	75
4.2	Kinetic Description of Plasmas .....	77
4.2.1	The Kinetic Equation .....	77
4.2.2	Landau Damping .....	78
4.3	Fluid Description of Plasmas .....	79
4.3.1	The MHD Equations .....	79
4.3.2	Consequences of the MHD Equations .....	82
4.4	MHD Instabilities .....	86
4.4.1	Classification of MHD Instabilities .....	86
4.4.2	Examples of MHD Instabilities .....	88
4.5	Summary .....	92
	References .....	93

## 5 Low Temperature Plasmas

	<i>J. Meichsner</i> .....	95
5.1	Introduction .....	95
5.2	Gas Discharges and Low Temperature Plasmas: Basic Mechanisms and Characteristics .....	98

mechanisms and Characteristics .....	70
5.2.1 Classical Townsend Mechanism and Electric Breakdown in Gases .....	98
5.2.2 Townsend and Glow Discharge .....	100
5.2.3 Arc Discharge .....	102
5.2.4 Streamer Mechanism and Micro-Discharges, Dielectric Barrier and Corona Discharge .....	102
5.2.5 Glow Discharge at Alternating Electric Field, RF and Microwave Discharge .....	104
5.3 Plasma Surface Transition .....	106
5.3.1 Plasma Boundary Sheath, Bohm Criterion .....	106
5.3.2 RF Plasma Sheath .....	108
5.3.3 Electric Probes .....	110
5.4 Reactive Plasmas and Plasma Surface Interaction .....	114
References .....	116
<b>6 Strongly Coupled Plasmas</b>	
<i>R. Redmer</i> .....	117
6.1 Introduction .....	117
6.2 Many-Particle Effects and Plasma Properties .....	118
6.2.1 Green's Function Technique: Spectral Function .....	119
6.2.2 Cluster Decomposition of the Self-Energy .....	122
6.3 Composition of Strongly Coupled Plasmas .....	125
6.4 Electrical Conductivity .....	127
6.5 Conclusion .....	130
References .....	131

---

## Part II Confinement, Transport and Collective Effects

---

### 7 Magnetic Confinement

<i>F. Wagner and H. Wobig</i> .....	137
7.1 Conditions for Fusion .....	137
7.2 The Need for Magnetic Confinement .....	138
7.3 Particle Motion in Electro-Magnetic Fields .....	139
7.4 Constants of Motion .....	144
7.4.1 Exact Invariants .....	144
7.4.2 Adiabatic Invariants .....	144
7.5 Concepts of Magnetic Confinement .....	147
7.5.1 Introduction .....	147
7.5.2 The Mirror Machine .....	147
7.5.3 Toroidal Confinement .....	148
7.5.4 Magnetic Surfaces and Toroidal Equilibrium .....	149
7.5.5 Confinement in Tokamaks .....	151
7.5.6 Coil System of Tokamaks .....	152
7.5.7 Theory of Tokamak Equilibria .....	153
7.5.8 Cylindrical Approximation .....	154

7.5.9	Confinement in Stellarators .....	156
7.6	Transport in Plasmas .....	163
7.6.1	Collisional Losses .....	164
7.6.2	Particle Picture of Classical Diffusion .....	165
7.6.3	Neoclassical Transport .....	166
7.6.4	Turbulent Transport .....	168
7.6.5	Empirical Scaling Laws .....	169
	References .....	171

## 8 Introduction to Turbulence in Magnetized Plasmas

<i>B.D. Scott</i> .....	173	
8.1	Part A – Statistical Nonlinearity and Cascade Dynamics .....	173
8.2	Eddy Mitosis and the Cascade Model .....	176
8.3	The Statistical Nature of Turbulence .....	179
8.4	Quadratic Nonlinearity and Three Wave Coupling for Small Disturbances .....	180
8.5	Incompressible Hydrodynamic Turbulence – Energy and Enstrophy	182
8.6	MHD Turbulence .....	187
8.7	Part B – Gradient Driven Turbulence in Magnetized Plasmas .....	190
8.8	Passive Scalar Dynamics .....	192
8.9	Dissipative Coupling and the Adiabatic Response .....	193
8.10	Computations in the Dissipative Coupling Model for Drift Wave Turbulence .....	198
8.11	No Coupling – the Hydrodynamic Limit .....	201
8.12	The Effects of Dissipative Coupling .....	205
8.13	Summary .....	208
8.14	Further Reading .....	210
	References .....	211

## 9 Transport in Toroidal Plasmas

<i>U. Stroth</i> .....	213	
9.1	Experimental Confinement Times and Diffusion Coefficients .....	214
9.1.1	Global Confinement Times .....	214
9.1.2	Diffusion Coefficients .....	218
9.1.3	The Collisional Transport Matrix .....	221
9.1.4	Diffusion as Random-Walk .....	223
9.2	Particle Orbits in Toroidal Magnetic Fields .....	225
9.2.1	Particles in a Toroidal Magnetic Mirror .....	225
9.2.2	Passing Particles .....	226
9.2.3	Trapped Particles and Banana Orbits .....	227
9.2.4	Trajectories in Stellarator Fields .....	228
9.2.5	Influence of a Radial Electric Field .....	229
9.3	Collisional Transport .....	231
9.3.1	Classical Transport in the Particle Picture .....	231
9.3.2	Classical Transport in the Fluid Picture .....	232

9.3.3	Pfirsch–Schlüter Transport in the Particle Picture . . . . .	234
9.3.4	Pfirsch–Schlüter Transport in the Fluid Picture . . . . .	235
9.3.5	The Toroidal Resonance . . . . .	236
9.3.6	Neoclassical Transport in the Particle Picture . . . . .	237
9.3.7	Elements of Stellarator Transport . . . . .	239
9.3.8	Neoclassical Transport in the Fluid Picture . . . . .	240
9.3.9	The Ambipolar Electric Field . . . . .	242
9.4	Turbulent Transport . . . . .	245
9.4.1	Fluid Turbulence . . . . .	245
9.4.2	Phenomenology of Turbulent Plasma Transport . . . . .	249
9.4.3	Two Fundamental Linear Instabilities . . . . .	252
9.4.4	Elements of a Drift Wave Model . . . . .	255
9.4.5	Experimental Results . . . . .	257
9.4.6	Transport Barriers . . . . .	260
References	. . . . .	264
