

PREFACE	ix
FUTURE CONTRIBUTIONS	xi
DEDICATION	xvii
FOREWORD	xix
LIST OF FREQUENTLY USED SYMBOLS	xxiii

1 Introduction

1.1 Modified Maxwell Equations and Basic Relations	1
1.2 Basic Concepts of the Calculus of Finite Differences	8
1.3 Lagrange Function and Modified Maxwell Equations	18
1.4 Dogma of the Continuum in Physics	26
1.5 Concept of Space Based on Finite Differences	30

2 Modified Klein-Gordon Equation

2.1 Differential Equation with Magnetic Current Density	44
2.2 Modified Klein-Gordon Difference Equation	52
2.3 Solution of the Difference Equation of Ψ_{x0}	61
2.4 Time-Dependent Solution of $\Psi_{x0}(\zeta, \theta)$	70
2.5 Hamilton Function and Quantization	78
2.6 Plots for First-Order Approximation	86

3 Inhomogeneous Difference Equation

3.1 Inhomogeneous Term of Eq. (2.2-31)	92
3.2 Evaluation of Eq. (3.1-32)	102
3.3 Quantization of the Solution for $\Delta x \gg h/m_0c$	115
3.4 Evaluation of the Energy \hat{U}_c	122
3.5 Plots for Second-Order Approximation	135

4 Klein-Gordon Difference Equation for Small Distances

4.1 Evaluation of the Difference Equation for $\Delta x \ll h/m_0c$	143
4.2 Evaluation of Eq. (4.1-4)	147
4.3 Quantization of the Solution for $\Delta x \ll h/m_0c$	155
4.4 Evaluation of the Energy \hat{U}_c for Small Distances	163

5 Difference Equation in Spherical Coordinates

5.1 Charged Particle in an Electromagnetic (EM) Field	183
