

CONTENTS

CONTRIBUTORS xiii

Introduction, by *H. Henry Stroke* 3

**Appreciation of Ben Bederson as Editor of Advances in Atomic,
Molecular, and Optical Physics**, by *Herbert Walther* 9

Benjamin Bederson Curriculum Vitae 11

Research Publications of Benjamin Bederson 17

A Proper Homage to Our Ben, by *Harry Lustig* 23

Benjamin Bederson in the Army, World War II, by *Val L. Fitch* 29

Physics Needs Heroes Too, by *C. Duncan Rice* 35

Two Civic Scientists—Benjamin Bederson and the other Benjamin,
by *Neal Lane* 41

An Editor *Par Excellence*, by *Eugen Merzbacher* 49

Ben as APS Editor, by *Bernd Crasemann* 57

Ben Bederson: Physicist–Historian 65

Roger H. Stuewer

1. Introduction 65

2. Wartime Reminiscences 66

3. Physics and New York City 69

4. APS Forum on the History of Physics 73

5. Conclusion 74

6. References 74

Pedagogical Notes on Classical Casimir Effects 75

Larry Spruch

1. Introduction 76

2. Dimensional Analysis and Physical Arguments 77

3. The Vanishing of $\bar{E}_{\text{CI}}$ 78

4. An Unauthorized Thank You 81

5. References 81

Polarizabilities of ^3P Atoms and van der Waals Coefficients for Their Interaction with Helium Atoms 83

X. Chu and A. Dalgarno

1. Introduction 84

2. Theory: Dynamic Polarizabilities 84

3. Numerical Method 86

4. Results: Static Dipole Polarizabilities 88

5. Van der Waals Coefficients 89

6. Acknowledgement 90

7. References 90

The Two Electron Molecular Bond Revisited: From Bohr Orbits to Two-Center Orbitals 93

Goong Chen, Siu A. Chin, Yusheng Dou, Kishore T. Kapale, Moochan Kim, Anatoly A. Svidzinsky, Kerim Urtekin, Han Xiong and Marlan O. Scully

1. Introduction 95

2. Recent Progress Based on Bohr’s Model 107

3. General Results and Fundamental Properties of Wave Functions 111

4. Analytical Wave Mechanical Solutions for One Electron Molecules . . 135

5. Two Electron Molecules: Cusp Conditions and Correlation Functions . 145

6. Modelling of Diatomic Molecules 155

7. Alternative Approaches 184

8. Conclusions and Outlook 191

9. Acknowledgements 191

10. Appendices 192

A. Separation of Variables for the H_2^+ -like Schrödinger Equation 192

B. The Asymptotic Expansion of $\Lambda(\lambda)$ for Large λ 193

C. The Asymptotic Expansion of $\Lambda(\lambda)$ as $\lambda \rightarrow 1$ 194

D. Expansions of Solution Near $\lambda \approx 1$ and $\lambda \gg 1$: Trial Wave Functions of James and Coolidge 196

E. The Many-Centered, One Electron Problem in Momentum Space . . . 198

F. Derivation of the Cusp Conditions 203

G. Center of Mass Coordinates for the Kinetic Energy $-\frac{1}{2m_1}\nabla_1^2 - \frac{1}{2m_2}\nabla_2^2$. 208

H. Verifications of the Cusp Conditions for Two-Centered Orbitals in Pro-late Spheroidal Coordinates 210

I. Integrals with the Heitler–London Wave Functions 216

J. Derivations Related to the Laplacian for Section 6.4 217

K. Recursion Relations and Their Derivations for Section 6.4 222

L. Derivations for the 5-Term Recurrence Relations (6.81) 231

M. Dimensional Scaling in Spherical Coordinates 232

11. References 236

Resonance Fluorescence of Two-Level Atoms 239

H. Walther

1. Introduction 239

2. Theory of the Spectrum of Resonance Fluorescence 240

3. Total Scattered Intensity, Intensity Correlations, and Photon Anti-bunching 244

4. More Theoretical Results—Variants of the AC Stark Effect 245

5. Experimental Studies of the Spectrum 247

6. Spectrum at Low Scattering Intensities and Extremely High Resolution . 251

7. Experiments on the Intensity Correlation—Photon Antibunching . . . 260

8. Photon Correlation Measured with a Single Trapped Particle 266

9. Conclusion 269

10. References 270

Atomic Physics with Radioactive Atoms 273

Jacques Pinard and H. Henry Stroke

1. Introduction 274

2. “Off-line” Experiments 275

3. “On-line” Experiments 280

4. Bohr–Weisskopf Effect 294

5. References 296

Thermal Electron Attachment and Detachment in Gases 299

Thomas M. Miller

1. Introduction 300

2. FALP Apparatus 303

3. Electron Attachment 309

4. Electron Detachment	323
5. Electron Affinity	329
6. New Plasma Effects	330
7. Concluding Remarks	332
8. Acknowledgements	334
9. References	336
Recent Developments in the Measurement of Static Electric Dipole Polarizabilities	343
<i>Harvey Gould and Thomas M. Miller</i>	
1. Introduction	344
2. Definitions	346
3. Deflection in Electric Field Gradients	347
4. Light Force Method	349
5. Interferometry Experiments	350
6. Laser-Cooled Atoms	352
7. Alkali Polarizability, Lifetime and the Dispersion Coefficient	354
8. Ionic Polarizabilities from Lifetimes	354
9. Core Polarizability from Microwave Spectroscopy of Rydberg Atoms and Ions	355
10. Concluding Remarks	356
11. Acknowledgements	357
12. References	357
Trapping and Moving Atoms on Surfaces	363
<i>Robert J. Celotta and Joseph A. Strosio</i>	
1. Introduction	364
2. Moving Atoms	365
3. Atom Dynamics	369
4. Summary and Comments	380
5. Future Expectations	380
6. Acknowledgements	382
7. References	382
Electron-Impact Excitation Cross Sections of Sodium	385
<i>Chun C. Lin and John B. Boffard</i>	
1. Introduction	385
2. Excitation out of the Ground State	387

3. Excitation out of Laser Excited States	401
4. Concluding Remarks	407
5. Acknowledgements	409
6. References	409
Atomic and Ionic Collisions	413
<i>Edward Pollack</i>	
Ben Bederson	414
1. Introduction	414
2. Collisions Involving Heavy Solar Wind Ions	416
3. Collisions Involving H^0 Projectiles	422
4. Proton Collisions in the Io Plasma Torus	441
5. Surface Collisions with Highly-Charged Ions	443
6. Acknowledgement	446
7. References	447
Atomic Interactions in Weakly Ionized Gas: Ionizing Shock Waves in Neon	451
<i>Leposava Vušković and Svetozar Popović</i>	
1. Introduction	452
2. Electron Impact Ionization from Excited Neon	455
3. Energy Pooling Processes in Neon	457
4. Ionizing Shock Waves in Neon	462
5. Concluding Remarks	466
6. Acknowledgements	466
7. References	466
Approaches to Perfect/Complete Scattering Experiments in Atomic and Molecular Physics	471
<i>H. Kleinpoppen, B. Lohmann, A. Grum-Grzhimailo and U. Becker</i>	
1. Introductory Remarks	472
2. Analysis of Atomic Collisions	474
3. Angle and Spin Resolved Analysis of Resonantly Excited Auger Decay	496
4. Complete Experiments for <i>Half-Collision</i> ; Auger Decay	512
5. Analysis of Molecular Collisions	519
6. Concluding Remarks	523
7. References	527

Reflections on Teaching 535

Richard E. Collins

Dedication 535

1. Introduction 536

2. Recollections 537

3. Characteristics of Great Teachers 543

4. Characteristics of Great Teaching 545

5. Rewards of Teaching 549

6. Who Should Teach? 550

7. Recognition of Excellent Teaching 552

8. Evaluation of Teaching 553

9. Assessment of Students 555

10. Conclusion 556

11. Acknowledgement 557

12. References 557
