

<b>Preface</b>	<b>xi</b>
<b>1 Getting started</b>	<b>1</b>
1.1 Introduction	1
1.2 The wavelet transform	2
1.3 Reading the book	3
<b>2 The continuous wavelet transform</b>	<b>6</b>
2.1 Introduction	6
2.2 The wavelet	6
2.3 Requirements for the wavelet	9
2.4 The energy spectrum of the wavelet	9
2.5 The wavelet transform	11
2.6 Identification of coherent structures	14
2.7 Edge detection	21
2.8 The inverse wavelet transform	25
2.9 The signal energy: wavelet-based energy and power spectra	28
2.10 The wavelet transform in terms of the Fourier transform	33
2.11 Complex wavelets: the Morlet wavelet	35
2.12 The wavelet transform, short time Fourier transform and Heisenberg boxes	45
2.13 Adaptive transforms: matching pursuits	51
2.14 Wavelets in two or more dimensions	55
2.15 The CWT: computation, boundary effects and viewing	56
2.16 Endnotes	63
2.16.1 Chapter keywords and phrases	63
2.16.2 Further resources	63
<b>3 The discrete wavelet transform</b>	<b>65</b>
3.1 Introduction	65
3.2 Frames and orthogonal wavelet bases	65
3.2.1 Frames	65
3.2.2 Dyadic grid scaling and orthonormal wavelet transforms	67
3.2.3 The scaling function and the multiresolution representation	69
3.2.4 The scaling equation, scaling coefficients and associated wavelet equation	72
3.2.5 The Haar wavelet	73
3.2.6 Coefficients from coefficients: the fast wavelet transform	75
3.3 Discrete input signals of finite length	77
3.3.1 Approximations and details	77
3.3.2 The multiresolution algorithm—an example	81
3.3.3 Wavelet energy	83
3.3.4 Alternative indexing of dyadic grid coefficients	85
3.3.5 A simple worked example: the Haar wavelet transform	87
3.4 Everything discrete	91
3.4.1 Discrete experimental input signals	91
3.4.2 Smoothing, thresholding and denoising	96
3.5 Daubechies wavelets	104
3.5.1 Filtering	112
