

Preface	ix
1 Introduction	1
1.1 The Problem of Anomalous Transport	1
1.2 Microscopic and Macroscopic Levels of Description	5
1.3 Closure of the Plasmadynamical Equations	10
1.4 Experimental Aspects	12
1.5 The Turbulent State of the Plasma	15
1.6 Statistical Description of a Turbulent Plasma	17
1.7 The Averaging Operation	20
2 Macroscopic Plasmadynamical Equations	22
2.1 The Inhomogeneous Plasma	22
2.2 Characteristic Quantities of a Fusion Plasma	28
2.3 Reduced Macroscopic Equations	32
2.4 The Hamaguchi-Horton Equations	33
2.5 The Hasegawa-Wakatani Equations	38
2.6 The Hasegawa-Mima Equation	43
3 Drift Waves	45
3.1 Introduction	45
3.2 Homogeneous plasmas	47
3.3 Density Gradient (DG) Drift Waves	48
3.4 Collisional DG Drift Waves	49
3.5 DG Drift-Ion Acoustic Waves	51
3.6 Ion Temperature Gradient (ITG) Modes	52
3.7 The ITG Mode in Different Geometries	57
4 Microscopic Equations for Plasma Fluctuations	59
4.1 Guiding Centre Variables	59
4.2 Electrostatic Fluctuations in Shearless Slab Geometry	65
4.3 The Gyrokinetic Equation	67
4.4 The Fourier Representation	73
5 Definition of Anomalous Fluxes	79
5.1 Introduction	79
5.2 The Particle Number Balance	81
5.3 The Thermal Energy Balance	83
5.4 The Electrostatic Energy Balance	86
6 Anomalous Fluxes and Correlations	90
6.1 Kinetic Equation and Langevin Equations	90
6.2 The Non-Markovian Kinetic Equation	93
6.3 Eulerian Correlations	97
6.4 Lagrangian Correlations	103
6.5 Fluxes and Lagrangian Correlations	105
6.6 The Local Equilibrium Approximation	107
