

PARTB

HYDROGEN ABSORBERS, MODERATORS AND TARGETS

Liquid Hydrogen Target Experience at SLAC	1043
J. G. Weisend II, R. Arnold, P. Bosted, R. Boyce, A. Candia, R. Carr, J. Gao, C E. Jones, W. Kaminskas, J. Mark, R. McKeown, M. Racine, S. St. Lorant, and T. Weber	
The Los Alamos Neutron Science Center Hydrogen Moderator System	1053
J. J. Jarme and J. N. Knudaon	
An Update for the MuCool Test Area	1060
A. Bross, M. A. Cummings, C. Dam, S. Ishimoto, A. Klebaner, A. Martinez, S. Norris, and L. Pci	
A Liquid Cryogen Absorber for MICE	1068
D. E. Baynham, P. Bish, T. Bradshaw, M. A. Cummings, M. A. Green, S. Ishimoto, I. Ivaniouchenkov, W. Lau, S. Q. Yang, and M S. Zisman	
The Cooling of a Liquid Absorber using a Small Cooler	1076
D. E. Baynham, T. Bradshaw, M. A. Green, S. Ishimoto, and N. Liggins	
The Development of 6061-Aluminum Windows for the MICE Liquid Absorber	1084
W. Lau, S. Q. Yang, M. A. Green, S. Ishimoio, and J. Swanson	

THERMOACOUSTIC DEVICES

Experiments and Valve Modelling in Thermoacoustic Device	1095
P. Duthil, D. Baltean Carles, A. Betrancourt, M X. Francois, Z. B. Yu, and J. P. Thcrmeau	
Preliminary Study on Circuit Simulation of Thermoacoustic Engines	1103
T. Jin, B. S. Zhang, X. M Zhong, and G. B. Chen	
Effect of Resonance Tube Shape on Performance of Thermoacoustic Engine	1109
X. Li, H. Ling, W. Dai, E. Lou, C. Chen, Y. Chen, and K. Tang	
Investigation on Gedeon Streaming in a Traveling Wave Thermoacoustic Engine	1115
L M. Qiu, D. M. Sun, Y. X. Tan, X. Deng, and G. B. Chen	
Experimental Investigation of a Traveling-wave Refrigerator	1123
E. C. Luo, W. Dai, Y. Zhang, and R Ling	
Experimental Study of Linear Compressor Driven Traveling-wave	
Thermoacoustic Refrigerator	1131
Z. Wu, E. Luo, W Dai, and G. Yu	
Clarification of Some Important Issues in Basic Thermoacoustic Theory	1139
W. Dai and E. C. Luo	

SUPERCONDUCTING RF SYSTEMS—II

Lessons Learned from the Jefferson Lab—SNS Cryomodule Production Run	1151
J. P. Hogan, E. R. Daly, J. Fischer, and J. Preble	
Cryogenic-related Performance of an SRF Cavity Module in N5RRC	1156
M. C. Lin, C. Wang, M. S. Yeh, L. H. Chang, F. T. Chung, T. T. Yang, S. S. Chang, G. H. Luo, and H. C. Li	
SCRF Cryogenic Operating Experience at FNPL	1164
B. D. DeGraff, W. Soyars, and A. Martinez	
Design, Fabrication, and Test of an SRF Cryomodule Prototype at Fermilab	1172
W. M. Soyan, Q. Darve, T. Nicol, and A. Rowe	
Thermal Limitations in Superconducting RF Cavities; Improved Heat Transfer at Niobium–Helium Interface	1179
A. Aizaz and T. L. Grimm	
Cryogenic Concept for the Low-energy Electrostatic Cryogenic Storage Ring (CSR) at MPI-K in Heidelberg	1187
R. von Hahn, V. Andrianarijaona, J. R. Crespo Lopez-Urrutia, H. Fadil, M. Griraer, Ch. Haberstroh, V. Mallinger, D. A. Orlov, R. Quack, M. Rappaport, C. D. Schroter, D. Schwalm, J. Ullrich, T. Weber, A. Wolf, and D. Zajfman	

INSTRUMENTATION AND CONTROLS—II

Modeling for Control Analysis and Design in SCQ Cooling System for BEPCU	1197
F. Y. Xu, L. Wang, G. D. Yang, and L. X. Jia	
Dynamic Modeling and Simulation of Liquid Helium Level in SRF Cryomodule for BEPCII	1203
F. Y. Xu, L. Wang, C. D. Yang, and L. X. Jia	
Specifications and Performances of the Series Superfluid Helium Safety Relief Valves for the LHC	1211
A. Perin and V. Fontanive	
Qualification of Sub-Atmospheric Pressure Sensors for the Cryomagnetic Bayonet Heat Exchangers of the Large Hadron Collider	1219
T. Bager, J. Casas-Cubillos, and N. Jeanmonod	
Automatic Management Systems for the Operation of the Cryogenic Test Facilities for LHC Series Superconducting Magnets	1227
A. Tovar-Gonzalez, J. Axensalva, L. Herblin, J. P. Larnbey, and B. Vulliernne	
Diode Temperature Sensor Curve Estimation and Intel-changeability for Non-Standard	

Excitation Currents	1235
S. S. Courts, C. J. Yeager, and J. K. Krause	
New Thermometers and Multisensors for Cryogenic Temperature and Magnetic Field Measurements	1243
V. F. Mitin, N. S. Boliovets, V. V. Basaneis, V. V. Kholevchuk, I. Yu. Nemisli, E. V. Mitin, P. C. McDonald, and E Pavese	

CRYOGENIC CURRENT LEADS

Cryogenic Benefits of a 70 kA High Temperature Superconductor Current Lead	1253
G. R. Zahn, W. H. Fietz, R. Heller, A. Kiczler, R. Lieznw, and V. L. Tanna	
HTS Power Lead Testing at the Fermilab Magnet Test Facility	1261
R. Rabehf, R. Carcagno, S. Feher, Y. Huang, D. Orrs, Y. Pischalnikov, C. Sylveiler, and M. tartaglia	
Cryogenic Test of High Temperature Superconducting Current Leads at ENEA	1269
S. Turtu, A. della Corte, A. Di Zenobio, R. Viola, M. Napolitano, C. Fiamozzi Zignani, J. Mayorga, U- Besi, Vetrella, A. Ballarino, and P. Chambouvet	
Optimal Current-lead Design for the Rolls or Pierced-metal Sheet	1276
H. M Chang, J. J. Byun, and J. R. Miller	
Performance of Miniature Coaxial Cables for Read-out of Superconducting Tunnel Junction Arrays	1284
A. Kushino, M. Ohkubo, K. Fujioka, and S. Kasai	

AEROSPACE MISSIONS USING HELIUM—JI

Mid-mission Update of Spitzer Space Telescope Cryogenic Performance	295
P. T. Finley and R. B. Schweickart	
Flight Performance of Gravity Probe B Cryogenic System	1303
D. O. Murray, M. A. Taller, and K. M. Burns	
The Cryogenic System of the Superconducting Magnet for the Alpha Magnetic Spectrometer	1315
S. M. Harrison, R. H. McMahon, S. R. Milward, R. C. Stafford Allen, R. Rajput-Ghoshal, H. Hofer, J. Ulbricht, G. Viertd, and S. C. C. Ting	

LOW VIBRATION CRYOCOOLERS

Ultra-low Vibration Pulse Tube Cryocooler with a New Vibration Cancellation Method	1325
T. Suzuki, T. Tomaru, T. Haruyama, T. Shintomi, N. Sato, A. Yamamoto, Y. Ikushima, and R. Li	
Development of the LPT9S10 1 W Concentric Pulse Tube	332
J. C Mullie, R. C. Bruins, T. Benschop, T. Charlesh A. Coyncl, L. Dutand	

CRYOGENIC THERMAL INSULATION SYSTEMS—11

Cryostat with Low-Emissivity Foil and Multilayer Insulation	1343
C. Gung, P. Hwang, J. V. Minervini, J. H. Schultz, G. Sabbi, P. Seidl, and N. Martovetsky	
Demonstration of Microsphere Insulation in Cryogenic Vessels	1351
R. G. Baumgartner, E. A. Myers, J. E. Fesmire, D. L. Morris, and E. R. Sokalski	
Vibration and Thermal Cycling Effects on Bulk-fill Insulation Materials for Cryogenic Tanks	1359
J. E. Fesmire, S. D. Augustynowicz, Z. F. Nagy, S. J. Sojourner, and D. L. Morris	

LARGE SCALE REFRIGERATORS AND LIQUEF1ERS—1

Development of a Database of the Cryogenic System for the Superconducting Magnet	1369
K. Aoki, T. Haruyama, and Y. Makida	
Cryosystem for a Proton-radiography Achromat	1377
J. P. Kelley, B. Blind, and A. J. Jason	
Surge Recovery Techniques for the Tevatron Cold Compressors	1384
A. Martinez, A. L. Klebaner, J. N. Makara, and I. C. Theilacker	
Critical Speed Measurements in the Tevatron Cold Compressors	1392
B. DeGraff, R. Bossr, A. Marlins and W. M. Soyars	
The Helium Cryogenic System for the Taiwan Photon Source	1399
F. Z. Hsiao, H. C. U. S. H. Chang, W. S. Chiou, and J. R. Chen	
The Planning of the Cryogenic Supply Infrastructure for the Superconducting Cavities of the European XFEL Linear Accelerator	1405
H. Lierl	
The TORE SUPRA Cryogenic System Behaviour During Long Plasma Discharges with a High Injected Energy	1412
D. Henry, P. Hertout, J. Y. Journeaux, J. L. Dueharteau, and P. Reynaud	
The 400W at LSK Test Facility at CEA-Grenoble	1420
P. Roussel, A. Girard, B. Jager, B. Ruusset, P. Bonnayh R Millet, and P. Gully	
Cryogenics for the Superconducting Module Test Facility	1428

A. L. Klebaner and J. C. Thielacker	
SNS Cryogenic Systems Commissioning	1436
D. Hatifeld, F. Casagrande, I. Campisi, P. Gurd, M. Howell, D. Stout, H. Strong, D. Arelius, J. Creel, K. Dixon, V. Ganni, and P. Knudsen	
Two Refrigeration Systems Installed for the Tokamak at the Institute for Plasma Research, Ahmedabad, India	1444
A. Caillaud, J. P. Bernard, M. Bonneton, F. Delcayre, V. Crabie, A. Fraud, and E. Waller	

LTS SUPERCONDUCTING MAGNET SYSTEMS—10

Numerical Analysis of Dynamic One-side Propagation of Normal Zone Observed in LHD Conductor	1455
M. Ohya, Y. Shirai, M. Shiotsu, and S. Imagawa	
Simulated Thermal Performance of the Superconducting Outsert in the Series Connected Hybrid Magnet System	1463
I. R. Dixon, A. V. Gavrilin, and J. R. Miller	
A Novel Short Sample Mounting Future for Critical Current Measurements	1471
P. Chesny, Ph. Fazilleau, and J.-M. Gheller	

AEROSPACE CRYOCOOLERS

Progress Toward a Pulse-tube/Reverse-Brayton Hybrid Cryocooler	1481
J. C. Evans, S. A. Potratz, J. R. Maddocks, A. Kashani, D. W. Hoch, G. F. Nellis, B. Flake, T. Robert, and T. Davis	
Hybrid Stirling/Reverse Brayton and Multi-stage Brayton Cryocoolers for Space Applications	1489
C. S. Kirkconnell, H. V. Zagarola, and J. T. Russo	
CFD Simulation of Oscillating Flow in an Inertance Tube and its Comparison to Other Models	1497
S. Guslafson, B. Flake, and A. Razani	
Development of Single Stage Stirling Cooler for Space Use	1505
K. Narasaki, S. Tsunematsu, K. Kanao, K. Otsuka, S. Hoshika, K. Fujioka, K. Tsurumi, and M. Hirabayashi	
Cooling the GIFTS FPA: Summary and Analysis of Engineering Test Results Performed at SDL Using the Lockheed Martin Two-stage Cryocooler	1513
S. M. Jensen, G. Hansen, T. Nast, and E. Rohr	

AEROSPACE CRYOGENICS

Low Temperature Engineering Applied to Lunar in-situ Resource Utilization	1523
B. X. Zhang and T. C. Chui	
Initial Test Results of Laboratory Scale Hydrogen Liquefaction and Densification System	1530
J. H. Baik and W. U. Notardonato	
Thermal Model for a Mars Instrument with Thermo-electric Cooled Focal Plane	1538
D. R. Ladner and J. P. Martin	

OSCILLATING FLOWS IN CRYOCOOLERS

Evaluation of Pressure Oscillator Losses	1549
P. E. Bradley, M. A. Lewis, and R. Radebaugh	
Impedance Measurements of Inertance Tubes	1557
M. A. Lewis, P. E. Bradley, and R. Radebaugh	
Thermoacoustically Driven Pulse tube Coolers with Acoustic Amplifiers	1564
J. Y. Hu, T. W. Dai, and E. C. Luo	
The Effect of Phase-shifting Mechanisms on the Energy and Exergy Flow in Pulse Tube Refrigerators	1572
A. Razani, C. Dodson, B. Rake, and T. Roberts	
An Analytical Heat Transfer Model for Reciprocating Laminar Flow in a Channel	1580
G. Grossman and I. Nachman	
Studies in High Frequency Oscillating Compressible Flow—For Micro Regenerative Cryocooler	1588
I. Garaway and G. Grossman	

LARGE SCALE CRYOSYSTEMS

Commissioning of the LHC Cryogenic Systems: Subsystems Cold Commissioning in Preparation of Full Sector Tests	1599
C. Calzas, G. Ferlin, N. Gilbert, H. Giuehagen, S. Knoops, C. Parent, M. Sanmarti, and L. Serin	
The Local Helium Compound Transfer Lines for the Large Hadron Collider Cryogenic System	1607
C. Parante, W. Allen, A. Munday, and P. Wiggins	

FAIR Cryogenics—New Tasks on the Cryogenic System for the New Research Facility at GSI	1614
M. Kaiuschke, C. El Schroeder and H. Quack	
Requirements for the Cryogenic Supply of the European XFEL Project at DESY	1620
Y. Bozhko, H. Lierl, B. Petersen, D. Sdlmann, and A. Zolciov	
Results of the Cryogenic Tests of the Superconducting Magnets Forming the Barrel Toroid of the ATLAS Experiment	1628
K. Baith, R. Delniele, A. Dudarev, S. Junter, R. Pengo, O. Piroiie, and C. Berriaud	
Cryogenic Tests of the ATLAS Liquid Argon Calorimeter	1635
J. Bremer, M. Chalifour, C. Fabrth, A. GonidFC, and C. Passardi	
ICARUS: An Innovative Large LAr Detector for Neutrino Physics	1643
C. Vignoli, on behalf of the ICARUS Collaboration, D. Barni, J. M. Disdier, D. Rampoldi, and G. PasbUdi	

VISUALIZATION EXPERIMENTS IN HELIUM II

Visualizing Heat Transport in He II	1653
S. W. Van Sciver	
Comparison between Normal and Hell Two-phase Flows at High Vapor Velocities	1669
S. Perraud, B. Rousset, P. Thibault, R. van Weelderen, and P. & Wolf	
PIV Analysis of Cavitation Flow Characteristics of He II	1677
K. Harada, and M. Murakami	
Solid H ₂ /D ₂ Particle Seeding and Injection System for Particle Image Velocimetry (PIV) Measurements of He II	1685
T. Xu and S. W. Van Sciver	

CRYOCOOLER INTEGRATION

LN ₂ -free Operation of the MEG Liquid Xenon Calorimeter by using a High-power Pulse Tube Cryocooler	1695
T. Hruyama, K. Kasarai, H. Nishiguchi, S. Mihara, T. Mori, W. Otani, R. Sawada, Y. Maruno, and T. Nishitani	
Performance and Orientation Independence of Two Production Model Desktop Acoustic-Stirling Cryocoolers	1703
E. R. James, J. A. Corey, and P. S. Spoor	
Characterization of a Co-axial Pulse Tube Cryocooler Applied as a Current Lead	1711
R. Maekawa, V. Matsubara, A. Kato, S. Takami, M. Konno, A. Tomioka, H. Hayashi, and	

T. Mito	
The Development of the CryoelTM LT and GT	1719
R. Z. Unger	
Pulse Tube Refrigerators for the Allen Telescope Array	1726
Jr B. Lugten	
High Efficient Cryocooler for Liquid Hydrogen System	1732
H. Nakagome	

LT5 SUPERCONDUCTING MAGNET SYSTEMS—III

Development of an 10 T Cryocooled Superconducting Magnet with a Room Temperature Bore of 360 mm for a 29 T Hybrid Magnet	1743
T. Iio, M. Ishizuka, T. Tsurudome, H. Ookubo, J. Sakuraba, S. Awaji, G. Nishijima, K. Koyama, K. Takahashi, and K. Watanabe	
Results of Buoyancy-gravity Effects in ITER Cable-in-Conduit Conductor with Dual Channel	1749
P Brozzone, B. Stepanov, R. Zanino, and L. S. Richard	
Review of Singular Cooling Inlet and Linear Pressure Drop for ITER Coils Cable in Conduit Conductor	1757
S. Nicolaci, D. Bessette, H. Cloez, P. Decool, B. Lacroix, C. A. Lebaillly, and J. P. Serries	
A Critical Assessment of Pressure Drop Design Criteria for the Conductors of the ITER Magnets	1765
R. Zanino, P. Bruzzone, and L. S. Richard	

AEROSPACE DEVICES

Cryogenic Test Apparatus for a Magnetic and Piezoelectric Actuation System	1775
R. A. Francescutti and A. Rowe	
Cryogenic Actuators and Motors Using Single Crystal Piezoelectrics	1783
X. N. Jiang and P. W. Rchrig	
Advanced Devices for Cryogenic Thermal Management	1790
D. Bugby, C. Stouffer, J. Garzon, M. Beres, and A. Gilchrist	
Cryogenic Thermal Management Advances during the CRYOTOOL Program	1799
D. Bugby, C. Stouffer, J. Garron, M. Beres, A. Gilchrist, T. Roberts, and T. Davis	
Rectified Continuous Plow Loop for the Thermal Management of Large Structures	1809
H. M. Skye, D. W. Hoch, G. R. Nellis, J. R. Maddocks, S. A. Klein, T. Roberts, and T. Davis	

HTS SUPERCONDUCTING MAGNET SYSTEMS—II

Development of a Superconducting Magnet System for the ONR/General Atomics Homopolar Motor	1819
K. M. Sctiaubel, A. R. Langhorn, W. P. Creedon, N. W. Johanson, S. Sheynin, and R. J. Thomas	

ROTATING MACHINERY

Experimental Results Obtained with Air Liquide Cold Compression System: CERN LHC and SNS Projects	1829
F. Delcayre, J-C. Courty, F. Hamber, B. Hilbert, E. Monneret, and J-L. Toia	
Performance Assessment of 35 Cold Hydrodynamic Compressors for the 1.8 K Refrigeration Units of the LHC	1837
F. Millet, S. Claudet, and G. Ferlin	
Development of a New Air Liquide Cryogenic Expander	1845
G. Meuot, J. C Courty, F. Delcayre, L. Drevard, F. Durand, and P. Gianesse	
Elimination of Thermal Acoustic Oscillations in Cryogenic Pumps	1852
T. J. Miller and Y. Gu	
Installation and Test of a Helium Centrifugal Pump into the TOSKA Facility	1860
G. R. Zahn, G. Dittrich, R. Lietzow, I. Meyer, E. Specht, and M. Susser	

AEROSPACE CRYOCOOLERS 4K-10K

Progress Towards a 6-10 K Turbo-Brayton Cryocooler	1869
M. V. Zagarola, K. J. Cragin, J. J. Breedlove, and T. M. Davis	
Development and Testing of a Small-scale Collins Type Cryocooler	1877
C. L. Harmon, B. Krass, J. Gerstmann, G. Chaudhry, J. G. Brisson, and J. L. Smith Jr.	
Development of a 3-stage Pulse Tube Cryocooler for Cooling at 10K and 75K	1885
J. R. Olson and T. Davis	

REGENERATORS—THERM ALAND MODELING

Microfabricated Microchannel Regenerators for Cryocoolers	1895
D. J. Guidry, J. J. McLean, and W. P. Avants	
Multilayer Ceramic Regenerator Materials for 4K Cooling	1904

T. Numazawa, K. Kamiya, T. Satoh, H. Nozawa, and T. Yanagitani	
Measurement of Anisotropic Hydrodynamic Parameters of Pulse Tube or Stirling	
Cryocooler Regenerators	1911
J. S. Cha, S. M. Ghiaasiaan, and P. V. Desai	
Regenerator Operation at Very High Frequencies for Microcryocoolers	1919
R. Radebaugh and A. O' Gallagher	
The Conduction of Heat through Cryogenic Regenerative Heat Exchangers	1929
W. F. Superczynski and G. F. Green	

AEROSPACE CRYOCOOLERS 40K-100K

On-Orbit Performance of the TES Pulse lube Coolers and Instrument—A First Year	
in Space	1937
J. I. Rodriguez, S. A. Collins, A. Na-Nakompanom, and D. L. Johnson	
HIRDLS Cryocooler Subsystem on-orbit Performance	1945
J. Lock, R. Slack, D. S. Glaister, and W. Gully	
Development of a Large Heat Lift 40–80 K Pulse Tubs Cooler for Space Applications	1951
T. Trollier, J. Tanchon, J. Buquet, A. Ravex, I. Charles, E. Flahaut, L. Duband, T. Mullie,	
J. Dam, T. Benschop, M. Linder, and J. L. Boy	
Test Results of an Engineering Model 2-stage Pulse lube Cryocooler for Cooling at	
75K and 130K	1959
D. J. Frank, J. Olson, and E. Roth	
Development of a Coaxial Pulse Tube Cryocooler for 77 K Cooling	1967
J. Olson, M. Moore, B. Evtimov, J. Jensen, and T. C. Nest	

LARGE SCALE REFRIGERATORS AND LIQUEFIERS—II

Simplified Helium Refrigerator Cycle Analysis Using the 'Carnot Step'	1977
P. Knudsen and V. Ganni	
Dynamic Characteristics of a Simple Brayton Cryocycle	1987
A. Kutzschbach, M. Kauschke, C. Haberstroh, and H. Quack	
Helium Refrigerator Design for Pulsed Heat Load for Tokomaks	1995
A. Kurndig and H. Schoenfeld	
Dynamic Simulation of a Large Scale Cryogenic Plant	2002
R. Maekawa, K. Ooba, K. Ando, and T. Mito	
The Relativistic Heavy Ion Collider (RHIC) Refrigerator System at Brookhaven	
National Laboratory: Phase III of the System Performance and Operations Upgrades	

for 2006	2010
A- Sidi-Yekhlef, R. Than. J. Tuozzolo, V. Ganni, P. Knudsen, and D. Arenius	
Commissioning of the Cryogenic System for the ATLAS Superconducting Magnets	2018
N. Delruelle, F. Haug, H. Ten Kate, G. Passardi, R. Pengo. M. Pezzetti, O. Pirotte, E. Baynham, T. Bradshaw. and J. Rochford	
Commissioning of the Helium Refrigeration System for the Compact Muon Solenoid (CMS) Detector of LHC	2026
G. Perinic and T. Dupont	
A 2K System for PKU-SCAF	2034
L. Wang, L. X. Jia, H. P. Du. A. B. Chen. F. Y. Xu	
Author Index	A1
Subject Index	S1
