# *Contents*

<b>1</b>	<b>Introduction to Plasmas</b>	<b>1</b>
1.1	Charge Neutrality and Landau Damping . . . . .	1
1.2	Fusion Core Plasma . . . . .	5
<b>2</b>	<b>Particle Orbit and Magnetic Configuration</b>	<b>11</b>
2.1	Particle Orbit . . . . .	11
2.1.1	Cyclotron Motion . . . . .	11
2.1.2	Drift Velocity of Guiding Center, Magnetic Moment .	12
2.1.3	Polarization Drift . . . . .	16
2.1.4	Pondromotive Force . . . . .	16
2.2	Coulomb Collision, Neutral Beam Injection . . . . .	18
2.2.1	Coulomb Collision . . . . .	18
2.2.2	Neutral Beam Injection . . . . .	23
2.2.3	Runaway Electron, Electric Resistivity . . . . .	24
2.3	Time and Space Scales in Plasmas . . . . .	25
2.4	Mirror . . . . .	28
2.5	Toroidal System . . . . .	29
2.5.1	Magnetic Surface . . . . .	29
2.5.2	Hamiltonian Equation of Motion . . . . .	30
2.5.3	Particle Orbit in an Axially Symmetric System . . .	33
2.5.4	Drift of Guiding Center in Toroidal Field (Circulating Particle and Banana) . . . . .	34
2.5.5	Effect of Longitudinal Electric Field on Banana Orbit	38
2.5.6	Orbit of Guiding Center and Magnetic Surface . . . .	39
<b>3</b>	<b>Magnetohydrodynamics</b>	<b>43</b>
3.1	Magnetohydrodynamic Equations for Two Fluids . . . . .	43
3.2	Magnetohydrodynamic Equations for One Fluid . . . . .	45
<b>4</b>	<b>Tokamak</b>	<b>51</b>
4.1	Tokamak Devices . . . . .	51
4.2	Equilibrium . . . . .	52
4.2.1	Equilibrium Equation . . . . .	52
4.2.2	Vertical Field for Tokamak Equilibrium . . . . .	63
4.2.3	Limit of Poloidal Beta Ratio for Equilibrium . . . .	66
4.2.4	Pfirsch-Schlüter Current, Shafranov Shift . . . . .	68

4.3	MHD Stability and Density Limit . . . . .	70
4.4	Impurity Control, Scrape Off Layer and Divertor . . . . .	75
4.5	Classical, Neoclassical Transports and Bootstrap Current . . .	80
4.5.1	Classical Diffusion (Collisional Diffusion) . . . . .	82
4.5.2	Neoclassical Diffusion of Electrons in Tokamak . . . . .	85
4.5.3	Bootstrap Current . . . . .	88
4.6	Confinement Scalings of L Mode and H Mode . . . . .	89
4.7	Steady-State Operation . . . . .	97
4.8	International Tokamak Experimental Reactor (ITER) . . . .	102
4.9	Trials to Innovative Tokamaks . . . . .	108
4.9.1	Spherical Tokamak . . . . .	108
4.9.2	Trials to Innovative Tokamak Reactors . . . . .	111
<b>5</b>	<b>Reversed Field Pinch (RFP)</b>	<b>117</b>
5.1	RFP Configuration . . . . .	117
5.2	MHD Relaxation . . . . .	118
5.2.1	Taylor's Theory on Relaxation . . . . .	118
5.2.2	Relaxation Process . . . . .	121
5.3	Confinement of RFP . . . . .	124
<b>6</b>	<b>Stellarator</b>	<b>131</b>
6.1	Helical Field . . . . .	131
6.2	Stellarator Devices . . . . .	136
6.3	Neoclassical Diffusion in Helical Field . . . . .	138
6.4	Confinement of Stellarator . . . . .	141
6.5	Quasi-Symmetric Stellarators . . . . .	144
6.5.1	Magnetic Coordinates (Boozer Coordinates) and Natural Coordinates (Hamada Coordinates) . . . . .	144
6.5.2	Boozer Equation of Drift Motion . . . . .	149
6.5.3	Quasi-Symmetric Stellarator System . . . . .	152
6.6	Conceptual Design of Stellarator Reactor . . . . .	154
<b>7</b>	<b>Mirror and Tandem Mirror</b>	<b>157</b>
7.1	Trapped Particles in Mirror and Confinement Time . . . . .	157
7.2	Mirror Experiments . . . . .	161
7.3	Instabilities in Mirror System . . . . .	163
7.4	Tandem Mirrors . . . . .	165
7.4.1	Theory of Tandem Mirror . . . . .	165
7.4.2	Tandem Mirror Experiments . . . . .	169
<b>8</b>	<b>Magnetohydrodynamic (MHD) Instabilities</b>	<b>175</b>
8.1	Interchange Instabilities . . . . .	176
8.1.1	Interchange Instability . . . . .	176
8.1.2	Stability Criterion for Interchange Instability, Magnetic Well . . . . .	179
8.2	Formulation of MHD Instabilities . . . . .	183
8.2.1	Linearization of MHD Equations . . . . .	183
8.2.2	Magnetoacoustic Wave . . . . .	186
8.2.3	Rayleigh-Taylor (Interchange) Instability . . . . .	187
8.3	Cylindrical Plasma with Sharp-Boundary Configuration . . .	189
8.4	Energy Principle . . . . .	193
8.4.1	Energy Integral in General . . . . .	193
8.4.2	Energy Integral in Illuminating Form . . . . .	196
8.4.3	Energy Integral of Axisymmetric Toroidal System . . .	196
8.5	Cylindrical Plasma with Diffuse Boundary Configurations .	198
8.5.1	Energy Integral of Cylindrical Plasma with Diffuse Boundary Configuration . . . . .	198
8.5.2	Suydam's Criterion . . . . .	201
8.5.3	Tokamak Configuration . . . . .	202
8.6	Hain-Lüst MHD Equation . . . . .	204
8.7	Ballooning Instability . . . . .	206
8.8	Eta-i Mode due to Density and Temperature Gradient . . .	210
8.9	Alfvén Eigen Mode . . . . .	212
<b>9</b>	<b>Resistive Instabilities</b>	<b>219</b>
9.1	Tearing Instability . . . . .	220
9.2	Neoclassical Tearing Mode . . . . .	225
9.3	Resistive Drift Instability . . . . .	232
9.4	Resistive Wall Mode . . . . .	235
9.4.1	Growth Rate of Resistive Wall Mode . . . . .	236
9.4.2	Feedback Stabilization of Resistive Wall Mode . . . . .	242
<b>10</b>	<b>Boltzmann Equation and Landau Damping</b>	<b>247</b>
10.1	Boltzmann Equation . . . . .	247
10.1.1	Phase Space and Distribution Function . . . . .	247
10.1.2	Boltzmann Equation and Vlasov Equation . . . . .	248
10.1.3	Fokker-Planck Collision Term . . . . .	250
10.2	Landau Damping . . . . .	253
10.3	Quasi-Linear Theory of Evolution in the Distribution Function	257
<b>11</b>	<b>Plasma as Medium of Waves</b>	<b>261</b>
11.1	Dielectric Tensor of Cold Plasma . . . . .	262
11.2	Properties of Waves . . . . .	266
11.2.1	Polarization and Particle Motion . . . . .	266
11.2.2	Cutoff and Resonance . . . . .	267
11.3	Waves in a Two-Component Plasma . . . . .	268
11.4	Various Waves . . . . .	272
11.4.1	Alfvén Wave . . . . .	272
11.4.2	Ion Cyclotron Wave and Fast Wave . . . . .	273
11.4.3	Lower Hybrid Resonance . . . . .	275

11.4.4	Upper Hybrid Resonance . . . . .	277
11.4.5	Electron Cyclotron Wave . . . . .	277
11.4.6	Dispersion Relation of Electrostatic Wave . . . . .	278
11.5	Dielectric Tensor of Hot Plasma . . . . .	280
11.5.1	Formulation of Dispersion Relation in Hot Plasma . .	280
11.5.2	Solution of Linearized Vlasov Equation . . . . .	283
11.5.3	Dielectric Tensor of Hot Plasma . . . . .	284
11.5.4	Dielectric Tensor of bi-Maxwellian Plasma . . . . .	287
11.5.5	Plasma Dispersion Function . . . . .	289
11.5.6	Dispersion Relation of Electrostatic Wave . . . . .	291
11.6	Velocity Space Instabilities . . . . .	294
11.6.1	Drift Instability (Collisionless) . . . . .	295
11.6.2	Various Velocity Space Instabilities . . . . .	295
<b>12</b>	<b>Wave Heating and Non-Inductive Current Drive</b>	<b>297</b>
12.1	Energy Flow . . . . .	298
12.2	Wave Heating in Ion Cyclotron Range of Frequency (ICRF) .	306
12.3	Lower Hybrid Heating . . . . .	310
12.4	Electron Cyclotron Heating . . . . .	314
12.5	Lower Hybrid Current Drive . . . . .	317
12.6	Electron Cyclotron Current Drive . . . . .	321
12.7	Neutral Beam Current Drive . . . . .	324
<b>13</b>	<b>Plasma Transport by Turbulence</b>	<b>329</b>
13.1	Fluctuation Loss, Bohm, GyroBohm Diffusion, and Convective Loss . . . . .	329
13.2	Loss by Magnetic Fluctuation . . . . .	334
13.3	Dimensional Analysis of Transport . . . . .	336
13.4	Computer Simulation by Gyrokinetic Particle and Full Orbit Particle Models . . . . .	340
13.4.1	Gyrokinetic Particle Model . . . . .	341
13.4.2	Full Orbit Particle Model . . . . .	346
13.5	Zonal Flow . . . . .	350
13.5.1	Hasegawa-Mima Equation for Drift Turbulence . . . .	350
13.5.2	Generation of Zonal Flow . . . . .	358
13.5.3	Geodesic Acoustic Mode (GAM) . . . . .	362
13.5.4	Zonal Flow in ETG Turbulence . . . . .	364
13.5.5	Remarks . . . . .	365
