

Table of Contents

1.	Astrophysical Information	1
1.1	Carriers of Information	2
1.2	Collecting and Analysing Information	9
1.2.1	The Main Characteristics of Photons	9
1.2.2	Observing Systems	10
1.2.3	Reaching a Systematic Description of Observation	26
1.3	Strategies and Costs	26
2.	The Earth's Atmosphere and Space	31
2.1	Physical and Chemical Structure of the Atmosphere	32
2.1.1	Vertical Structure	32
2.1.2	Constituents of the Atmosphere	33
2.2	Absorption of Radiation	36
2.3	Atmospheric Emission	41
2.3.1	Fluorescent Emission	41
2.3.2	Thermal Emission	44
2.3.3	Differential Measurement Techniques	47
2.4	Scattering of Radiation	48
2.5	Atmospheric Refraction and Dispersion	52
2.6	Turbulence Structure of the Earth's Atmosphere	52
2.6.1	Turbulence in the Lower and Middle Atmosphere	53
2.6.2	Ionospheric Turbulence	60
2.7	Terrestrial Observing Sites	60
2.7.1	Visible, Infrared and Millimetre Observations	60
2.7.2	Centimetre Radioastronomy and Beyond	63
2.7.3	Man-Made Pollution and Interference	63
2.7.4	The Antarctic	64
2.8	Observation from Space	65
2.8.1	The Advantages of Observation from Space	66
2.8.2	Sources of Perturbation	66
2.8.3	Choice of Orbits	72
2.9	The Moon as an Astronomical Site	74
2.10	Exercises	75

3.	Radiation and Photometry	79
3.1	Radiometry	80
3.2	Aspects of Radiation	84
3.2.1	Blackbody Radiation	84
3.2.2	Coherence	85
3.3	Magnitudes	90
3.4	Photometry Through the Atmosphere	92
3.5	Calibration and Intensity Standards	93
3.5.1	Radiofrequencies ($\lambda > 1 \text{ mm}$)	94
3.5.2	Submillimetre, Infrared and Visible	95
3.5.3	Ultraviolet and X-Rays ($0.1 \text{ nm} < \lambda < 300 \text{ nm}$)	100
3.5.4	Gamma Radiation	102
3.5.5	Some Examples of Spectrophotometry	102
3.6	Exercises	105
4.	Telescopes and Images	107
4.1	Image and Object in Astronomy	108
4.1.1	Geometrical Images	109
4.1.2	Gravitational Optics	114
4.2	Diffraction and Image Formation	115
4.2.1	The Zernike-van Cittert Theorem	115
4.2.2	Diffraction at Infinity. Pupils	120
4.2.3	Pupils and Spatial Filtering	125
4.2.4	Waveguides and Fibre Optics	131
4.3	Telescopes	133
4.3.1	Radiotelescopes (Beyond the Submillimetre Range)	133
4.3.2	Ground-Based Optical Telescopes (Visible and Infrared)	146
4.3.3	Aperture Synthesis in the Visible and Infrared	149
4.3.4	Space Telescopes, from Ultraviolet to Submillimetre	157
4.3.5	X-Ray Telescopes (0.1–10 keV)	159
4.3.6	γ -Ray Telescopes ($> 10 \text{ keV}$)	160
4.4	Image Degradation by the Atmosphere	167
4.4.1	Perturbations of the Wavefront	168
4.4.2	Image Formation	171
4.4.3	Short-Exposure Images and Speckle Interferometry	172
4.4.4	Adaptive Optics	175
4.4.5	Phase Perturbations in Aperture Synthesis	182
4.5	Image Processing	184
4.5.1	The Principal Solution	185
4.5.2	Methods of Information Restitution	186
4.6	Exercises	188

5.	Spectral Analysis	197
5.1	Astrophysical Spectra	198
5.1.1	Formation of Spectra	198
5.1.2	Information in Spectrometry	204
5.2	General Features of Spectrometers	210
5.3	Interferometric Spectrometers	215
5.3.1	General Criteria	215
5.3.2	Interference Filters	216
5.3.3	Grating Spectrometers	217
5.3.4	Fourier Transform Spectrometer	232
5.3.5	The Fabry-Perot Spectrometer	239
5.3.6	The Bragg Crystal Spectrometer (X-ray Region)	241
5.4	Radiofrequency Spectrometry	244
5.4.1	Multichannel Spectrometers	246
5.4.2	The Acoustic Spectrometer	247
5.4.3	The Autocorrelation Spectrometer	247
5.4.4	Submillimetre Developments	248
5.5	Resonance Spectrometers	250
5.6	Exercises	252
6.	The Signal in Astronomy	255
6.1	The Signal and Its Fluctuations	256
6.1.1	Observing System and Signal	256
6.1.2	Signal and Fluctuations. Noise	257
6.1.3	Elementary Signal Processing	263
6.1.4	A Specific Example of Data Processing	271
6.2	Fundamental Fluctuations	272
6.2.1	Quantum Noise	276
6.2.2	Thermal Noise	279
6.3	Exercises	282
7.	Detectors	289
7.1	General Properties	290
7.1.1	Amplitude Detectors. Quadratic Detectors	290
7.1.2	Spatial Structure of Detectors	292
7.1.3	Temporal Response	295
7.1.4	Detector Noise	296
7.1.5	Characterisation of Detectors	297
7.2	Physical Principles of the Detection of Electromagnetic Radiation	298
7.2.1	Detection of Quanta	299
7.2.2	Detection of the Electromagnetic Field	309
7.3	The Main Astronomical Detectors	312
7.3.1	Photographic Plates	312

7.3.2	Photomultipliers and Classical Cameras (X-Ray, UV and Visible)	316
7.3.3	Solid-State Imagers	324
7.3.4	Detectors for the Visible and Ultraviolet	338
7.3.5	Other Infrared Detectors (1–1 000 μm)	340
7.3.6	General Features of Radiofrequency Detection	345
7.3.7	Radiofrequency Detectors	352
7.4	High-Energy Detectors (X- and γ -Ray)	358
7.4.1	X-Ray Detection (0.1–10 keV)	358
7.4.2	γ -Ray Detection (> 10 keV)	362
7.5	Neutrino Detection	371
7.5.1	Inelastic Reaction Detectors	371
7.5.2	Momentum Transfer Detectors	373
7.6	Gravitational Wave Detection	374
7.7	Exercises	379
8.	Space–Time Reference Frames	385
8.1	Spatial Reference Systems	385
8.1.1	Definitions of Spatial Frames	385
8.1.2	A List of Astronomical Reference Frames	387
8.1.3	Change of Frame	393
8.2	Practical Realisation of Spatial Frames	397
8.2.1	Celestial Reference Systems	397
8.2.2	Fundamental Catalogues	398
8.2.3	The Extra-Galactic System	399
8.2.4	The Hipparcos Frame	403
8.3	Temporal Reference Systems	408
8.3.1	Time Scales	408
8.3.2	Atomic Time	410
8.3.3	Coordinated Universal Time (CUT or UTC)	414
8.3.4	Dynamical Time Scales	415
8.3.5	Dates and Epochs	417
	Appendix A. Fourier Transforms	419
A.1	Definitions and Properties	419
A.1.1	Definitions	419
A.1.2	Some Properties	420
A.1.3	Important Special Cases in One Dimension	421
A.1.4	Important Special Cases in Two Dimensions	424
A.1.5	Important Theorems	425
A.2	Physical Quantities and Fourier Transforms	430
A.3	Wavelets	433

Appendix B. Random Processes and Variables	435	
B.1	Random Variables	435
B.2	Random or Stochastic Processes	442
B.3	Physical Measurements and Estimates	449
B.3.1	An Example of Estimation: Law of Large Numbers	450
B.3.2	Estimating the Moments of a Process	451
B.3.3	Estimation and Bias	453
Appendix C. Physical and Astronomical Constants	457	
Appendix D. Tables of Space Missions	459	
Appendix E. Astronomy on the World Wide Web	463	
Appendix F. Acronyms and Abbreviations	481	
Bibliography	485	
Index	501
