Abbreviations	XXI
Symbols	XXVII
Physical Constants	XXXI
1 Introduction	1
1.1 Timetable	1
1.2 Nobel Prize Winners	7
1.3 General Information	9

Part I Fundamentals

2 Bonds	15
2.1 Introduction	15
2.2 Covalent Bonds	15
2.2.1 Electron-Pair Bond	15
2.2.2 sp^3 Bond	15
2.2.3 sp^2 Bond	19
2.3 Ionic Bonds	21
2.4 Mixed Bond	23
2.5 Metallic Bond	25
2.6 van-der-Waals Bond	26
2.7 Hamilton Operator of the Solid	27
3 Crystals	29
3.1 Introduction	29
3.2 Crystal Structure	29
3.3 Lattice	30
3.3.1 Unit Cell	30
3.3.2 Point Group	31
3.3.3 Space Group	33
3.3.4 2D Bravais Lattices	34
3.3.5 3D Bravais Lattices	34
3.3.6 Polycrystalline Semiconductors	39

3.3.7	Amorphous Semiconductors	39	5.3.2	Biaxial Strain	99
3.4	Important Crystal Structures	40	5.3.3	Three-Dimensional Strain	100
3.4.1	Rocksalt Structure	41	5.3.4	Substrate Bending	102
3.4.2	CsCl Structure	41	5.3.5	Scrolling	103
3.4.3	Diamond Structure	41	5.3.6	Critical Thickness	105
3.4.4	Zincblende Structure	42	5.4	Cleaving	109
3.4.5	Wurtzite Structure	43			
3.4.6	Chalcopyrite Structure	45	6	Band Structure	111
3.4.7	Delafossite Structure	46	6.1	Introduction	111
3.4.8	Perovskite Structure	48	6.2	Bloch's Theorem	111
3.4.9	NiAs Structure	48	6.3	Free-Electron Dispersion	112
3.5	Polytypism	48	6.4	Kronig-Penney Model	114
3.6	Reciprocal Lattice	50	6.5	Electrons in a Periodic Potential	116
3.6.1	Reciprocal Lattice Vectors	51	6.5.1	Approximate Solution at the Zone Boundary	117
3.6.2	Miller Indices	52	6.5.2	Solution in the Vicinity of the Zone Boundary	118
3.6.3	Brillouin Zone	54	6.5.3	Kramer's degeneracy	119
3.7	Alloys	54	6.6	Band Structure of Selected Semiconductors	119
3.7.1	Random Alloys	55	6.6.1	Silicon	119
3.7.2	Phase Diagram	57	6.6.2	Germanium	119
3.7.3	Virtual Crystal Approximation	59	6.6.3	GaAs	119
3.7.4	Lattice Parameter	59	6.6.4	GaP	120
3.7.5	Ordering	61	6.6.5	GaN	120
			6.6.6	Lead Salts	121
4	Defects	63	6.6.7	Chalcopyrites	122
4.1	Introduction	63	6.6.8	Delafossites	123
4.2	Point Defects	63	6.6.9	Perovskites	123
4.3	Thermodynamics of Defects	65	6.7	Alloy Semiconductors	124
4.4	Dislocations	67	6.8	Amorphous Semiconductors	125
4.5	Stacking Faults	71	6.9	Systematics of Semiconductor Bandgaps	125
4.6	Grain Boundaries	72	6.10	Temperature Dependence of the Bandgap	129
4.7	Antiphase and Inversion Domains	73	6.11	Equation of Electron Motion	131
4.8	Disorder	76	6.12	Electron Mass	132
			6.12.1	Effective Mass	132
5	Mechanical Properties	77	6.12.2	Polaron Mass	135
5.1	Introduction	77	6.12.3	Nonparabolicity of Electron Mass	136
5.2	Lattice Vibrations	77	6.13	Holes	136
5.2.1	Monoatomic Linear Chain	77	6.13.1	Hole Concept	136
5.2.2	Diatomic Linear Chain	80	6.13.2	Hole Dispersion Relation	138
5.2.3	Lattice Vibrations of a Three-Dimensional Crystal	84	6.13.3	Valence-Band Fine Structure	140
5.2.4	Phonons	86	6.14	Strain Effect on the Band Structure	142
5.2.5	Localized Vibrational Modes	87	6.14.1	Strain effect on Band Edges	143
5.2.6	Phonons in Alloys	89	6.14.2	Strain Effect on Effective Masses	144
5.2.7	Electric Field Created by Optical Phonons	91	6.15	Density of States	144
5.3	Elasticity	94	6.15.1	General Band Structure	144
5.3.1	Stress-Strain Relation	94	6.15.2	Free-Electron Gas	145

7	Electronic Defect States	149	9	Optical Properties	213
7.1	Introduction	149	9.1	Spectral Regions and Overview	213
7.2	Fermi Distribution	149	9.2	Reflection and Diffraction	214
7.3	Carrier Concentration	151	9.3	Electron-Photon Interaction	216
7.4	Intrinsic Conduction	153	9.4	Band-Band Transitions	219
7.5	Shallow Impurities, Doping	156	9.4.1	Joint Density of States	219
7.5.1	Donors	157	9.4.2	Direct Transitions	219
7.5.2	Acceptors	164	9.4.3	Indirect Transitions	221
7.5.3	Compensation	167	9.4.4	Urbach Tail	223
7.5.4	Amphoteric Impurities	170	9.4.5	Intravalence-Band Absorption	225
7.5.5	High Doping	171	9.4.6	Amorphous Semiconductors	225
7.6	Quasi-Fermi Levels	174	9.4.7	Excitons	225
7.7	Deep Levels	175	9.4.8	Exciton Polariton	229
7.7.1	Charge States	176	9.4.9	Bound-Exciton Absorption	232
7.7.2	Jahn-Teller Effect	177	9.4.10	Biexcitons	234
7.7.3	Negative- <i>U</i> Center	178	9.4.11	Trions	235
7.7.4	DX Center	180	9.4.12	Burstein-Moss Shift	235
7.7.5	EL2 Defect	182	9.4.13	Bandgap Renormalization	236
7.7.6	Semi-insulating Semiconductors	183	9.4.14	Electron-Hole Droplets	238
7.7.7	Surface States	184	9.4.15	Two-Photon Absorption	239
7.8	Hydrogen in Semiconductors	185	9.5	Impurity Absorption	240
8	Transport	189	9.6	Free-Carrier Absorption	242
8.1	Introduction	189	9.7	Lattice Absorption	245
8.2	Conductivity	190	9.7.1	Dielectric Constant	245
8.3	Low-Field Transport	191	9.7.2	Reststrahlenbande	246
8.3.1	Mobility	191	9.7.3	Polaritons	248
8.3.2	Microscopic Scattering Processes	192	9.7.4	Phonon-Plasmon Coupling	249
8.3.3	Ionized Impurity Scattering	193	10	Recombination	251
8.3.4	Deformation Potential Scattering	193	10.1	Introduction	251
8.3.5	Piezoelectric Potential Scattering	194	10.2	Band-Band Recombination	251
8.3.6	Polar Optical Scattering	194	10.2.1	Spontaneous Emission	251
8.3.7	Temperature Dependence	194	10.2.2	Absorption	252
8.4	Hall Effect	197	10.2.3	Stimulated Emission	253
8.5	High-Field Transport	200	10.2.4	Net Recombination Rate	253
8.5.1	Drift-Saturation Velocity	200	10.2.5	Recombination Dynamics	254
8.5.2	Velocity Overshoot	201	10.2.6	Lasing	256
8.5.3	Impact Ionization	202	10.3	Free-Exciton Recombination	256
8.6	High-Frequency Transport	205	10.4	Bound-Exciton Recombination	258
8.7	Diffusion	205	10.5	Alloy Broadening	260
8.8	Continuity Equation	206	10.6	Phonon Replica	261
8.9	Heat Conduction	207	10.7	Donor-Acceptor Pair Transitions	265
8.10	Coupled Heat and Charge Transport	209	10.8	Inner-Impurity Recombination	267
8.10.1	Seebeck Effect	209	10.9	Auger Recombination	267
8.10.2	Peltier Effect	210	10.10	Band-Impurity Recombination	268

10.11	Field Effect	272	13.3.2	Electrical and Transport Properties	331
10.11.1	Thermally Activated Emission	272	13.3.3	Self-Assembled Preparation	336
10.11.2	Direct Tunneling	273	13.3.4	Optical Properties	341
10.11.3	Assisted Tunneling	273			
10.12	Multilevel Traps	273			
10.13	Surface Recombination	274			
10.14	Excess-Carrier Profiles	274			
11	Heterostructures	277	14	Polarized Semiconductors	345
11.1	Introduction	277	14.1	Introduction	345
11.2	Growth Methods	277	14.2	Spontaneous Polarization	345
11.3	Material Combinations	280	14.3	Ferroelectricity	346
11.3.1	Pseudomorphic Structures	280	14.3.1	Materials	348
11.3.2	Heterosubstrates	280	14.3.2	Soft Phonon Mode	348
11.4	Band Lineup in Heterostructures	285	14.3.3	Phase Transition	348
11.5	Energy Levels in Heterostructures	286	14.3.4	Domains	352
11.5.1	Quantum Well	286	14.3.5	Optical Properties	353
11.5.2	Superlattices	293	14.4	Piezoelectricity	353
11.5.3	Single Heterointerface Between Doped Materials ..	293			
11.6	Recombination in Quantum Wells	295	15	Magnetic Semiconductors	359
11.7	Isotope Superlattices	299	15.1	Introduction	359
11.8	Wafer Bonding	300	15.2	Magnetic Semiconductors	359
			15.3	Diluted Magnetic Semiconductors	361
12	External Fields	303	15.4	Spintronics	365
12.1	Electric Fields	303	15.4.1	Spin Transistor	366
12.1.1	Bulk Material	303	15.4.2	Spin LED	367
12.1.2	Quantum Wells	305			
12.2	Magnetic Fields	306	16	Organic Semiconductors	369
12.2.1	Free-Carrier Absorption	307	16.1	Materials	369
12.2.2	Energy Levels in Bulk Crystals	308	16.2	Properties	371
12.2.3	Energy Levels in a 2DEG	309			
12.2.4	Shubnikov-de Haas Oscillations	310	17	Dielectric Structures	375
12.3	Quantum Hall Effect	313	17.1	Photonic-Bandgap Materials	375
12.3.1	Integral QHE	313	17.1.1	Introduction	375
12.3.2	Fractional QHE	317	17.1.2	General 1D Scattering Theory	375
12.3.3	Weiss Oscillations	318	17.1.3	Transmission of an <i>N</i> -Period Potential	377
			17.1.4	The Quarter-Wave Stack	379
			17.1.5	Formation of a 3D Band Structure	382
13	Nanostructures	321	17.1.6	Defect Modes	385
13.1	Introduction	321	17.1.7	Coupling to an Electronic Resonance	387
13.2	Quantum Wires	321	17.2	Microscopic Resonators	390
13.2.1	Preparation Methods	321	17.2.1	Microdiscs	390
13.2.2	Quantization in Two-Dimensional Potential Wells ..	328	17.2.2	Purcell Effect	392
13.3	Quantum Dots	328	17.2.3	Deformed Resonators	393
13.3.1	Quantization in Three-Dimensional Potential Wells	328	17.2.4	Hexagonal Cavities	395

Part II Applications

18	Diodes	401
18.1	Introduction	401
18.2	Metal-Semiconductor Contacts	402
18.2.1	Band Diagram in Equilibrium	402
18.2.2	Space-Charge Region	407
18.2.3	Schottky Effect	409
18.2.4	Capacitance	410
18.2.5	Current-Voltage Characteristic	412
18.2.6	Ohmic Contacts	421
18.2.7	Metal Contacts to Organic Semiconductors	424
18.3	Metal-Insulator-Semiconductor Diodes	425
18.3.1	Band Diagram for Ideal MIS Diode	427
18.3.2	Space-Charge Region	428
18.3.3	Capacity	432
18.3.4	Nonideal MIS Diode	435
18.4	Bipolar Diodes	435
18.4.1	Band Diagram	436
18.4.2	Space-Charge Region	437
18.4.3	Capacitance	442
18.4.4	Current-Voltage Characteristics	443
18.4.5	Breakdown	454
18.5	Applications and Special Diode Devices	457
18.5.1	Rectification	457
18.5.2	Frequency Mixing	460
18.5.3	Voltage Regulator	462
18.5.4	Zener Diodes	463
18.5.5	Varactors	463
18.5.6	Fast-Recovery Diodes	466
18.5.7	Step-Recovery Diodes	466
18.5.8	pin-Diodes	468
18.5.9	Tunneling Diodes	469
18.5.10	Backward Diodes	471
18.5.11	Heterostructure Diodes	471
19	Light-to-Electricity Conversion	473
19.1	Photocatalysis	473
19.2	Photoconductors	475
19.2.1	Introduction	475
19.2.2	Photoconductivity Detectors	475
19.2.3	Electrophotography	477
19.2.4	QWIPs	477
19.2.5	Blocked Impurity-Band Detectors	482
19.3	Photodiodes	484
19.3.1	Introduction	484
19.3.2	pn Photodiodes	484
19.3.3	pin Photodiodes	487
19.3.4	Position-Sensing Detector	489
19.3.5	MSM Photodiodes	490
19.3.6	Avalanche Photodiodes	495
19.3.7	Traveling-Wave Photodetectors	498
19.3.8	Charge Coupled Devices	501
19.3.9	Photodiode Arrays	509
19.4	Solar Cells	511
19.4.1	Solar Radiation	511
19.4.2	Ideal Solar Cells	513
19.4.3	Real Solar Cells	516
19.4.4	Design Refinements	516
19.4.5	Solar-Cell Types	517
19.4.6	Commercial Issues	520
20	Electricity-to-Light Conversion	523
20.1	Radiometric and Photometric Quantities	523
20.1.1	Radiometric Quantities	523
20.1.2	Photometric Quantities	523
20.2	Scintillators	524
20.2.1	CIE Chromaticity Diagram	525
20.2.2	Display Applications	528
20.2.3	Radiation Detection	528
20.2.4	Luminescence Mechanisms	530
20.3	Light-Emitting Diodes	531
20.3.1	Introduction	531
20.3.2	Spectral Ranges	531
20.3.3	Quantum Efficiency	532
20.3.4	Device Design	533
20.4	Lasers	539
20.4.1	Introduction	539
20.4.2	Applications	542
20.4.3	Gain	543
20.4.4	Optical Mode	547
20.4.5	Loss Mechanisms	552
20.4.6	Threshold	554
20.4.7	Spontaneous Emission Factor	555
20.4.8	Output Power	555
20.4.9	Temperature Dependence	559
20.4.10	Mode Spectrum	560
20.4.11	Longitudinal Single-Mode Lasers	560
20.4.12	Tunability	562

20.4.13	Modulation	564
20.4.14	Surface-emitting Lasers	568
20.4.15	Optically Pumped Semiconductor Lasers	571
20.4.16	Quantum Cascade Lasers	573
20.4.17	Hot-Hole Lasers	573
20.5	Semiconductor Optical Amplifiers	575
21	Transistors	577
21.1	Introduction	577
21.2	Bipolar Transistors	577
21.2.1	Carrier Density and Currents	579
21.2.2	Current Amplification	582
21.2.3	Ebers–Moll Model	583
21.2.4	Current–Voltage Characteristics	585
21.2.5	Basic Circuits	588
21.2.6	High-Frequency Properties	589
21.2.7	Heterobipolar Transistors	590
21.2.8	Light-emitting Transistors	590
21.3	Field-Effect Transistors	592
21.4	JFET and MESFET	593
21.4.1	General Principle	593
21.4.2	Static Characteristics	594
21.4.3	Normally On and Normally Off FETs	597
21.4.4	Field-Dependent Mobility	598
21.4.5	High-Frequency Properties	601
21.5	MOSFETs	601
21.5.1	Operation Principle	601
21.5.2	Current–Voltage Characteristics	602
21.5.3	MOSFET Types	606
21.5.4	Complementary MOS	608
21.5.5	Large-Scale Integration	610
21.5.6	Nonvolatile Memories	614
21.5.7	Heterojunction FETs	615
21.6	Thin-Film Transistors	619

Part III Appendices

A	Tensors	623
B	Kramers–Kronig Relations	627
C	Oscillator Strength	629
D	Quantum Statistics	635

E	The $k \cdot p$ Perturbation Theory	639
F	Effective-Mass Theory	643
	References	645
