

## LIST OF CONTENTS

### Contents

Preface	v
Prefaces to previous editions	vi
Contents	x
Units and Conversion Tables	xvii

<b>1 Perspectives</b>	<b>1</b>
1.1 Current penetration of renewable energy technologies in the marketplace	1
1.2 The energy scene – its history and present state	14
1.2.1 Man's energy history	
1.3 The energy future and the role of renewable energy	24
1.4 Suggested topics for discussion	28
<b>2 The Origin of Renewable Energy Flows</b>	<b>29</b>
2.1 Solar radiation	29
2.1.1 Energy production in the interior of stars like the Sun	30
2.1.2 Spectral composition of solar radiation	30
<i>The structure of the solar surface; Radiation received at the Earth</i>	
2.2 Net radiation flux at the earth	36
2.2.1 Radiation at the top of the atmosphere	36
<i>The disposition of incoming radiation</i>	
2.2.2 Radiation at the Earth's surface	43
<i>Direct and scattered radiation; Disposition of the radiation at the Earth's surface; Disposition of radiation in the atmosphere; Annual, seasonal and diurnal variations in the radiation fluxes at the Earth's surface; Penetration of solar radiation</i>	
2.3 Physical and chemical processes near the Earth's surface	56
2.3.1 The atmosphere	56
<i>Particles in the atmosphere; Absorption and scattering in the atmosphere; Absorption processes in different frequency regions; Models for the description of scattered radiation; The types of stored energy; Total energy fluxes; Energy transfer processes; Vertical transport in the Earth-atmosphere boundary layer; The description of atmospheric motion; Time averaging; Features of the observed atmospheric circulation; Energy conversion processes and the separation of scales of motion; Creation and destruction of kinetic energy; Models of general atmospheric circulation</i>	

## LIST OF CONTENTS

2.3.2 The oceans and continents	91
<i>The water cycle; Evaporation processes; The state variables of the oceans; Scales of oceanic motion; Joint models of general circulation in oceans and atmosphere</i>	
2.3.3 The climate	115
<i>Climate variables; Stability of climate; The ergodic hypothesis</i>	
2.4 The energy cycle of the Earth	122
2.4.1 The flows of energy and matter	122
<i>The undisturbed energy cycle; Man's interference with the energy cycle; Matter cycles; The carbon cycle; The nitrogen cycle</i>	
2.4.2 Climate changes	134
<i>Climatic history; Causes of climatic change; The white Earth state; Man's interference with climate; Aerosols; Carbon dioxide</i>	
2.A Origins of stellar energy	154
<i>The birth and main-sequence stage of a star; The red-giant and shell-burning stages; Equilibrium processes and supernovae explosions; The formation of heavy elements; Equilibrium processes in the Sun; The energy transport equations; Nuclear reactions in the Sun; A model of the solar processes; Cosmology; The "Big-Bang" model; The cosmic background radiation</i>	
2.B Vertical transport in or near the boundary layer	176
<i>Water transport; The disposition of water and heat in soils; Geothermal heat fluxes; Momentum exchange processes between atmosphere and oceans</i>	
2.C Modelling the atmosphere and the oceans	184
<i>The basic equations in terms of time-averaged variables; The atmospheric heat source function; Separation of scales of motion; Energy conversion processes in the atmosphere; Modelling the oceans; Basic equations governing the oceanic circulation</i>	
2.D Tides and waves	197
<i>Gravity waves in the oceans; The formation and dissipation of energy in wave motion; The energy flux associated with wave motion; Wind-driven oceanic circulation</i>	
2.5 Suggested topics for discussion	207
<b>3 The Individual Energy Sources</b>	<b>210</b>
3.1 Solar radiation	210
3.1.1 Direct radiation	212
<i>Dependence on turbidity and cloud cover</i>	
3.1.2 Scattered radiation	216

## LIST OF CONTENTS

3.1.3	Total short-wavelength radiation <i>Reflected radiation; Average behaviour of total short-wavelength radiation</i>	218
3.1.4	Long-wavelength radiation <i>Empirical evidence for inclined surfaces</i>	226
3.1.5	Variability of solar radiation <i>Geographical distribution of solar power; Power duration curves</i>	231
3.2	Wind	236
3.2.1	Wind velocities <i>The horizontal wind profile; Wind speed data</i>	237
3.2.2	Kinetic energy in the wind	245
3.2.3	Power in the wind	247
3.2.4	Variability in wind power <i>Power duration curves</i>	249
3.3	Ocean waves	254
3.3.1	Wave spectra	254
3.3.2	Power in the waves <i>Waves in a climatic context</i>	258
3.4	Water flows and tides	262
3.4.1	Ocean currents <i>Variability in current power</i>	262
3.4.2	River flows, hydropower and elevated water storage <i>Geographical distribution of hydropower resources; Environmental impact</i>	267
3.4.3	Tides	271
3.5	Heat flows and stored heat	275
3.5.1	Solar-derived heat sources <i>The power in ocean thermal gradients; Temperature gradients in upper soil and air</i>	276
3.5.2	Geothermal flows and stored energy <i>Regions of particularly high heat flow; The origin of geothermal heat; Distribution of the smoothly varying part of the heat flow</i>	282
3.6	Biological conversion and storage of energy	289
3.6.1	Photosynthesis <i>Mechanism of green plant photosynthesis; Efficiency of conversion; Bacterial photosynthesis</i>	290
3.6.2	Productivity in different environments <i>Ecological systems; Limiting factors; Productivity data</i>	296
3.7	Other energy sources.	307
3.7.1	Atmospheric electricity	307
3.7.2	Salinity differences	309
3.7.3	Nuclear energy	311
3.8	Suggested topics for discussion	316

## LIST OF CONTENTS

4	The Energy Conversion Processes	318
4.1	Principles of energy conversion	318
4.1.1	Conversion between energy forms <i>Irreversible thermodynamics; Efficiency of an energy conversion device</i>	318
4.1.2	Thermodynamic engine cycles	327
4.1.3	Thermoelectric and thermionic conversion <i>Thermoelectric generators; Thermionic generators</i>	330
4.1.4	Turbines and other flow-driven converters <i>Free stream flow turbines; Magnetohydrodynamic converters</i>	334
4.1.5	Photovoltaic conversion <i>The p-n junction; Solar cells</i>	339
4.1.6	Electrochemical conversion <i>Fuel cells; Other electrochemical conversion schemes</i>	349
4.2	Conversion of solar radiation	354
4.2.1	Heat generation <i>Flat-plate collectors; Stalled and operating collector; Heat exchange; Flat-plate collector with heat storage; Concentrating collectors and tracking systems; Energy collection from focusing systems</i>	354
4.2.2	Applications for cooling, pumping, etc.	376
4.2.3	Solar electricity generation <i>Photo-thermoelectric converters; Photovoltaic converters; Monocrystalline silicon cells; Multicrystalline cells; Stacked cells; Amorphous cells; Other materials and other thin-film cells; Organic and other photoelectrochemical solar cells; Module construction; Optical subsystem and concentrators; Use of residual energy</i>	380
4.3	Conversion of wind energy	412
4.3.1	Conversion of wind flow	412
4.3.2	Propeller-type converters <i>Theory of non-interacting streamtubes; Model behaviour of power output and matching to load; Non-uniform wind velocity; Restoration of wind profile in wake, and implications for turbine arrays</i>	416
4.3.3	Cross-wind converters <i>Performance of a Darrieus-type converter</i>	436
4.3.4	Augmenters and other "advanced" converters <i>Ducted rotor; Rotor with tip-vanes; Other concepts</i>	440
4.3.5	Heat, electrical or mechanical power, and fuel generation	445
4.3.6	Commercial wind power development <i>Off-shore foundation and transmission</i>	447
4.4	Conversion of wave energy	455
4.4.1	Pneumatic converter	456

## LIST OF CONTENTS

4.4.2 Oscillating vane converter	460
4.5 Conversion of water flows or elevated water	463
4.6 Conversion of heat	466
4.6.1 Application to heating	466
Heat pumps	
4.6.2 Conversion of heat into work or electricity	468
Conversion of heat from solar collectors; Ericsson hot-air engine; Conversion of geothermal heat; Conversion of ocean thermal energy	
4.7 Conversion of fuels	474
4.7.1 Fuel cell technologies	474
4.8 Conversion of biological material	478
4.8.1 Heat production from biomass	480
Producing heat by burning; Composting; Metabolic heat	
4.8.2 Fuel production from biomass: overview and generation of gaseous fuels	487
Biogas; Thermochemical gasification of biomass	
4.8.3 Fuel production from biomass: generation of liquid biofuels	504
Direct photosynthetic production of hydrocarbons; Alcohol fermentation; Methanol from biomass	
4.9 Other conversion processes	512
4.9.1 Conversion of salinity gradient resources	512
4.A Energy bands in semiconductors	515
4.10 Suggested topics for discussion	520
<b>5 Energy Transmission and Storage</b>	<b>523</b>
5.1 Energy transmission	523
5.1.1 Transmission of heat	524
District heating lines; Heat pipes	
5.1.2 Transmission of electricity	526
Normal conducting lines; Superconducting lines	
5.1.3 Other types of transmission	529
5.2 Energy storage	530
5.2.1 Storage of heat	530
Heat capacity storage; Solar ponds and aquifer storage; Latent heat storage associated with structural or phase change	
5.2.2 Storage of high-quality energy forms	554
Pumped hydro storage; Flywheels; Compressed gas storage; Hydrogen storage; Batteries; Other storage concepts	
5.3 Suggested topics for discussion	588

## LIST OF CONTENTS

<b>6 Energy Supply Systems</b>	<b>591</b>
6.1 Energy systems	591
6.2 Simulation of system performance	592
6.2.1 Treatment of the time variable	594
6.2.2 Load structure	596
Biologically acceptable surroundings; Food and water; Security; Health; Relations; Activities; Summary of end-use energy requirements	
6.2.3 Source data	619
6.2.4 Photovoltaic power production	621
6.2.5 Wind power production	625
6.2.6 Food production	632
6.2.7 Biofuel production	639
6.2.8 System choice	644
6.3 Examples of local system simulations	645
6.3.1 Solar heat or heat-and-electricity producing systems	646
Model description; Solar radiation data; Heat load of an individual house; Heat pump systems; Software validation and results of simulation	
6.3.2 Wind electricity systems	672
System without energy storage; Regulation of a fuel-based back-up system; Systems with short-term storage; Systems with long-term storage	
6.4 A global energy scenario	698
6.4.1 Decentralised renewable energy 2050 scenario	698
6.4.2 Centralised renewable energy 2050 scenario	706
6.4.3 Implementation and resilience of scenario	723
6.5 Suggested topics for discussion	727
<b>7 Socio-economic Assessment of Energy Supply Systems</b>	<b>731</b>
7.1 Framework of socio-economic analysis	731
7.1.1 Social values and the introduction of monetary economies	732
7.1.2 Economic theory	734
Production planning; Distribution problems; Actual pricing policies	
7.2 Direct cost evaluation	741
7.2.1 Treatment of inflation	742
7.2.2 Present value calculations	743
7.2.3 Cost profiles and break-even prices	744
7.3 Indirect economics	749
7.3.1 Resource and environmental management	749
Energy analysis; Social interest rate	

## LIST OF CONTENTS

7.3.2 Regional economy	754
7.3.3 National economy	756
<i>Employment; Use of subsidies for introducing "appropriate technology"</i>	
7.3.4 World economy	762
7.3.5 Privatisation of the energy industry and related problems	764
7.4 Life-cycle analysis	767
7.4.1 Defining purpose and scope of LCA	768
7.4.2 Treatment of import and export	771
7.4.3 What to include in an LCA	775
<i>Qualitative or quantitative estimates of impacts; Treatment of risk-related impacts and accidents in LCA</i>	
7.4.4 Choosing the context	780
7.4.5 Aggregation issues	781
<i>Social context</i>	
7.4.6 Monetising issues	787
<i>Statistical value of life; Depreciation</i>	
7.4.7 Chain calculations	790
7.4.8 Matrix calculations	794
<i>Marginal versus systemic change</i>	
7.4.9 Communicating with decision-makers	797
7.4.10 Application of life-cycle analysis	800
7.4.11 LCA of greenhouse gas emissions	801
<i>Greenhouse warming impacts; Estimating greenhouse warming externalities for fuel combustion</i>	
7.4.12 LCA of power production chains	814
<i>Fossil fuel chains; Nuclear fuel chain; Renewable energy chains; LCA of road traffic</i>	
7.4.13 LCA of energy systems	838
<i>Environmentally sustainable scenario; Fair market scenario; Comparison of scenario impacts</i>	
7.5 Examples of break-even price estimations	855
7.5.1 Wind power system without energy storage	855
<i>Additional costs of regulation</i>	
7.5.2 Wind power system with storage	863
7.6 Suggested topics for discussion	867
<b>8 Winding Up</b>	870
<i>Conversion of renewable energy sources; Energy storage and auxiliaries; Market penetration of renewable energy</i>	
References	877
Subject Index	916
