Chapter 1 (M. Arenz, S. Gilb and U. Heiz)**Size effects in the chemistry of small clusters**

1. Introduction	1
2. CO oxidation on small gold clusters	5
2.1. Preparation of the model catalysts	6
2.2. Experimental observation of the CO combustion on gold clusters	7
2.3. Description of the reaction mechanism by DFT calculations	8
2.3.1. LH _t	11
2.3.2. LH _p	11
2.3.3. Eley–Rideal	11
2.4. The role of the surface defects	12
2.5. The role of the electronic structure	15
2.6. Structural dynamic fluxionality	16
2.7. Impurity doping	17
2.8. Coadsorption of water	19
3. The CO chemistry of supported Pd _N clusters	21
3.1. CO oxidation on Pd _N clusters supported on thin MgO films	23
3.2. Molecular beam techniques	24
3.3. Activation energies	26
3.4. Size effects	29
3.5. NO reduction by CO on Pd single crystals and supported Pd nanoparticles: a short summary	31
3.6. NO reduction by CO on supported Pd _N clusters	33
3.7. Low-temperature catalysis: the reaction mechanism	34
4. The polymerization of acetylene on supported clusters	37
4.1. The trimerization reaction on single atoms	38
4.2. The selectivity of acetylene polymerization on Pd _N clusters	43
5. Size-selected, supported clusters: exciting new model systems for electrocatalysis	45
6. Conclusion	47
Note	47
References	47

*Chapter 2 (S.M. Lang, D.M. Popolan and T.M. Bernhardt)***Chemical reactivity and catalytic properties of size-selected gas-phase metal clusters**

1. Introduction	53
2. Experimental techniques in cluster ion chemistry	55
2.1. Flow tube reactor	55
2.2. Collision gas cell	57
2.3. Low-energy ion guide	59
2.4. Ion traps	60
3. Concepts in cluster ion chemistry	64
3.1. Particle size-dependent reactivity	64
3.2. Charge state-dependent reactivity	64
3.3. Composition-dependent reactivity	64
3.4. Cooperative coadsorption effects	65
3.5. Ultimate “single site” catalysts	65
4. Catalytic activity of gas-phase clusters	65
4.1. Review of free transition metal cluster catalysis	65
4.1.1. Iron clusters	65
4.1.2. Platinum clusters	67
4.2. Gold cluster catalysis	69
4.2.1. Electronic structure and chemical properties of free gold clusters	70
4.2.2. Catalytic CO oxidation by Au_2^-	73
4.3. Silver cluster catalysis	77
4.3.1. Reactivity of silver clusters toward molecular oxygen	78
4.3.2. Catalytic CO oxidation by Ag_n^-	81
4.3.3. Catalytic NO reduction with CO on Ag_n^-	82
4.4. Catalytic activity of bimetallic clusters	83
4.4.1. Bimetallic silver–gold clusters	84
4.4.2. Bimetallic platinum–gold clusters	85
5. Concluding remarks	86
References	87

*Chapter 3 (H.-J. Zhai, X. Li and L.-S. Wang)***Probing the unique size-dependent properties of small Au clusters, Au alloy clusters, and CO-chemisorbed Au clusters in the gas phase**

1. Introduction	91
2. Experimental method	93
3. Electronic and structural properties of elemental gold clusters	95
3.1. Small Au cluster anions Au_n^- ($n = 1\text{--}14$): planarity and 2D-to-3D transition	95

3.1.1. Au_4^- and Au_5^-	96
3.1.2. Au_6^-	97
3.1.3. Au_7^- and Au_8^-	98
3.1.4. Au_9^- , Au_{11}^- , and Au_{13}^-	98
3.1.5. Au_{10}^-	98
3.1.6. Au_{12}^-	98
3.1.7. Au_{14}^-	99
3.2. Au_{20} : a tetrahedral cluster and an ideal molecular model for nanogold catalysis	99
3.3. Toward solution synthesis of the tetrahedral Au_{20} cluster	103
3.4. Au_{32} : a golden fullerene cage cluster?	106
4. Novel gold alloy clusters	111
4.1. Observation of Au_2H^- impurity in pure gold clusters and implications for the anomalous Au–Au distances in gold nanowires	111
4.2. Atomic-like magnetism in transition-metal-doped gold clusters: MAu_6 ($\text{M} = \text{Ti}, \text{V}, \text{Cr}$)	114
4.3. Icosahedral gold cage clusters: $\text{M}@\text{Au}_{12}$ ($\text{M} = \text{W}, \text{Mo}$) and $\text{M}@\text{Au}_{12}^-$ ($\text{M} = \text{V}, \text{Nb}, \text{Ta}$)	118
5. Gold as hydrogen in Si–Au and B–Au clusters	122
5.1. SiAu_4 : aurosilane	123
5.2. Structures and bonding in Si_2Au_n^- and Si_2Au_n ($n = 2$ and 4) and comparisons to Si_2H_2 and Si_2H_4	127
5.3. B_7Au_2^- vs. B_7H_2^-	131
6. CO chemisorption on Au clusters: implications for nanogold catalysis	138
6.1. Chemisorption sites of CO on small gold clusters and transitions from chemisorption to physisorption: $\text{Au}_m(\text{CO})_n^-$ ($m = 2\text{--}5, n = 0\text{--}7$)	138
6.2. Unique CO chemisorption properties of gold hexamer: $\text{Au}_6(\text{CO})_n^-$ ($n = 0\text{--}3$)	141
7. Concluding remarks	145
Note added in proof	146
Acknowledgments	146
References	146

Chapter 4 (S.K. Buratto, M.T. Bowers, H. Metiu, M. Manard, X. Tong, L. Benz, P. Kemper and S. Chrétien) **Au_n and Ag_n ($n = 1\text{--}8$) nanocluster catalysts: gas-phase reactivity to deposited structures**

1. Introduction	151
2. Experimental methods	152
2.1. Ion mobility mass spectrometry	152
2.1.1. Instrumentation	152
2.1.2. Equilibrium reactions	153
2.1.3. Theory	154

2.2. Ion soft landing of mass-selected Au_n^+ and Ag_n^+ on TiO_2	154
2.2.1. The ion cluster source	154
2.2.2. Sample preparation and STM	156
2.3. Density functional theory calculations of clusters on $\text{TiO}_2(1\bar{1}0)$ surfaces	157
3. Interactions between Au_n and Ag_n cluster ions and small alkenes	159
3.1. Introduction	159
3.2. $\text{Ag}_m^+(\text{C}_2\text{H}_4)_n$ and $\text{Ag}_m^+(\text{C}_3\text{H}_6)_n$ ($m = 1\text{--}9$) association reactions	160
3.2.1. Cluster structures from ligand binding energies	168
3.3. $\text{Au}_m^+(\text{C}_2\text{H}_4)_n$ ($m = 1\text{--}9$) association reactions	172
3.3.1. Polyatomic gold cations	172
3.4. Conclusions	178
4. Au_n^+ and Ag_n^+ deposited on $\text{TiO}_2(1\bar{1}0)$ surfaces under soft-landing conditions	178
4.1. Introduction	178
4.2. Scanning tunneling microscopy of TiO_2	179
4.3. Au_n^+ ($n = 1\text{--}8$) on $\text{TiO}_2(1\bar{1}0)$	180
4.3.1. Structures of Au_n ($n = 1\text{--}7$) on TiO_2 : comparing DFT structures with STM	182
4.3.2. Summary of Au_n clusters on TiO_2	192
4.4. Ag_n^+ ($n = 1\text{--}5$) on $\text{TiO}_2(1\bar{1}0)$	194
4.5. Conclusions	196
References	197

*Chapter 5 (M. Chen and D.W. Goodman)***Oxide-supported metal clusters**

1. Introduction	201
2. Alumina-supported metal clusters	202
2.1. Preparation of Al_2O_3 on a metal or alloy surface	203
2.2. Pt-group metals on Al_2O_3	206
2.3. IB group metals on Al_2O_3	212
3. Magnesium oxide-supported metal clusters	214
3.1. Preparation of MgO films	214
3.2. Pt-group metals on $\text{MgO}(1\bar{0}0)$	218
3.3. IB group metals on MgO	220
4. Silica-supported metal clusters	225
4.1. Preparation of SiO_2 thin films	225
4.2. IB group metals on SiO_2	227
4.3. Pt-group metals on SiO_2	231
5. Titania-supported metal clusters	237
5.1. TiO_2 single crystals	237

5.2. Metal clusters on $\text{TiO}_2(1\bar{1}0)$	239
5.2.1. Pt-group metals	239
5.2.2. IB group metals	247
5.3. Preparation of titania thin films	251
5.4. Au on $\text{TiO}_x/\text{Mo}(1\bar{1}2)$	255
6. Conclusions	257
Acknowledgments	257
References	258

*Chapter 6 (S. Neukermans, E. Janssens, R.E. Silverans and P. Lievens)***Magic numbers for shells of electrons and shells of atoms in binary clusters**

1. Introduction	271
2. Production of binary clusters	274
3. Phenomenological modelling of the many body problem for doped metal clusters	276
4. A selection of doped metal cluster systems	279
4.1. Electronegatively doped group I, II and III metal clusters	279
4.2. Transition-metal-doped coinage metal clusters	283
4.3. Transition-metal/metal-doped group IV	288
5. Summary and outlook	293
References	293

*Chapter 7 (J. Jellinek and P.H. Acioli)***Computational electron spectroscopy of gas-phase metal clusters**

1. Introduction	299
2. Converting Kohn–Sham eigenenergies into electron binding energies	301
3. Computational methodology	306
4. Magnesium clusters: results and discussion	307
4.1. Structures	307
4.2. Electronic features	310
4.2.1. Role of size and structure	312
4.2.2. Size-induced transition to metallicity: role of the charge state	319
5. Aluminium clusters: results and discussion	322
6. Summary	325
Acknowledgments	325
References	325

*Chapter 8 (K.R. Asmis, A. Fielicke, G. von Helden and G. Meijer)***Vibrational spectroscopy of gas-phase clusters and complexes**

1. Introduction	327
2. Methods	328

2.1. Mechanism of infrared multiple photon excitation (IR-MPE)	330
2.2. Infrared resonance enhanced multiple photon dissociation and ionization	331
2.3. Messenger atom technique	331
3. Experimental section	332
3.1. Infrared free electron laser (IR-FEL)	332
3.2. Molecular beam spectrometer	334
3.3. Guided ion beam tandem-mass spectrometer	335
4. Results	337
4.1. Metal carbide clusters	337
4.1.1. IR-REMPI of titanium carbide clusters	337
4.1.2. IR spectra of titanium carbide nanocrystals	340
4.2. Metal oxide clusters	342
4.2.1. Zr, Mg, Al, and Ti oxide clusters	343
4.2.2. Niobium oxide cluster cations	345
4.2.3. Vanadium oxide ions	345
4.3. Transition metal clusters	356
4.3.1. Geometric structure and vibrational spectroscopy	356
4.3.2. Photodissociation using messenger atoms	357
4.3.3. Vanadium and niobium clusters	359
4.4. Complexes of transition metal clusters	364
4.4.1. Developments in the vibrational spectroscopy of metal cluster complexes	364
4.4.2. Effects of cluster size and charge on the binding of CO to rhodium clusters	367
5. Summary and conclusions	370
Note	371
Acknowledgments	371
References	371

Chapter 9 (J.H. Parks and X. Xing)

Trapped ion electron diffraction: structural evolution of silver and gold clusters	
1. Introduction	377
2. Methods of trapped ion electron diffraction	379
2.1. Diffraction apparatus	379
2.1.1. Cluster ion and diffraction beamlines	380
2.1.2. Electron background	381
2.1.3. Ion trap data sequence	381
2.1.4. Detection	383
2.2. Diffraction data	385
2.2.1. Diffraction analysis	385
2.2.2. Data fitting methods	387
3. Structural transitions in metal clusters	388

3.1. Silver cluster cations	388
3.1.1. Experimental results	389
3.1.2. Analysis and discussion	391
3.1.3. Summary	397
3.2. Gold cluster anions	397
3.2.1. Experimental results	397
3.2.2. Analysis and discussion	398
3.2.3. Summary	404
4. Outlook	404
Acknowledgments	405
References	405

*Chapter 10 (A.W. Castleman, Jr. and S.N. Khanna)***Superatoms: building blocks of new materials**

1. Introduction	409
2. Jellium: tenets, electron counts and energetic stability	411
3. Cluster stability, electronic markers and superatoms	411
4. Adding a third dimension to the periodic table	413
4.1. Rare-gas mimics: creating a closed-shell system	413
4.2. Superhalogen character	414
4.3. An alkaline earth-like system	416
4.4. Multivalence character	417
5. Influencing properties: creation of active sites and effects on reactivity	418
6. Establishing the concept of employing superatoms in producing nanoscale materials formation	419
6.1. Arsenic–potassium cluster materials as an example	419
7. Implications of cluster science to material and surface properties	421
7.1. Promising approaches	421
7.2. Potential pitfalls in extending concepts	423
Acknowledgments	424
References	424

*Chapter 11 (H. Brune and S. Rusponi)***Magnetic properties of 2D islands on single crystal metal surfaces**

1. Introduction	427
2. Magnetization vs. temperature	429
3. Co islands on Pt(111): MAE and reversal mechanism	433
3.1. Transition from blocking to superparamagnetic	434
3.2. Magnetization reversal	439
3.3. Tailoring the magnetism of 2D nanoparticles	442
3.4. Oxidation effect on the island MAE	443

4. Superlattices of uniaxial monodomain islands	445
4.1. Self-assembly of equidistant islands	445
4.2. Uniform magnetic properties of Co islands on Au(788)	450
4.3. Array of room temperature blocked nanoparticles: Co pillars on Au(111)	453
5. MAE and magnetic moment of single atoms	454
5.1. Single Co atoms and small islands on Pt(111)	454
5.2. Magnetic impurities on alkali metals	457
6. Spatially resolved measurements of spin polarization of magnetic islands	459
7. Conclusions and outlook	465
References	466

*Chapter 12 (W. Wurth and M. Martins)***Electronic structure and magnetic properties of small deposited transition metal clusters**

1. Introduction	471
2. Discussion	472
2.1. Small isolated transition metal cluster	472
2.1.1. Electronic structure	472
2.1.2. Magnetic properties	473
2.2. Small supported transition metal cluster	475
2.2.1. Electronic structure	475
2.2.2. Magnetic properties	476
3. Summary	483
Acknowledgments	484
References	484

*Chapter 13 (C. Binns)***Magnetic properties of deposited and embedded clusters**

1. Introduction	487
2. Deposited clusters	491
2.1. Morphology of films produced by depositing clusters	491
2.2. Magnetic measurements based on dichroism	492
2.3. Magnetism in exposed clusters	495
2.3.1. Isolated elemental clusters	495
2.3.2. The effect of cluster-cluster interactions of exposed clusters on surfaces	501
3. Embedded nanoparticle assemblies	505
3.1. Atomic structure of embedded clusters	505
3.2. In situ studies of Co-coated Fe clusters	507
3.3. Magnetometry of isolated Fe and Co clusters in Ag matrices	510

3.4. Monte Carlo model of nanoparticle assemblies	514
3.5. Evolution of magnetic behaviour with nanoparticle volume fraction below the percolation threshold	516
3.6. Pure cluster films	518
4. Applications of cluster-assembled films	523
4.1. Giant magnetoresistance	524
4.2. High moment soft films	525
5. Conclusions and summary	529
References	530

*Chapter 14 (G.M. Pastor and J. Dorantes-Dávila)***Theory of magnetic clusters and nanostructures at surfaces**

1. Introduction	535
2. Ground-state theory	536
2.1. Model Hamiltonians and mean-field approximation	537
2.2. Relativistic corrections	539
3. Free and embedded clusters	542
3.1. Simple trends as a function of coordination number	542
3.2. Magnetic clusters in matrices	543
3.3. Magnetic anisotropy of small clusters	545
3.4. Size-dependent enhancement of orbital magnetism	547
4. Binary alloy clusters	550
4.1. Structure and spin moments of Co_NRh_M clusters	550
4.2. Orbital moments and magnetic anisotropy energy	552
5. Ferromagnetic clusters on highly polarizable substrates	555
5.1. Spin and orbital moments of Co_N clusters on Pd(111)	555
5.2. Magnetic anisotropy energy and spin reorientations	558
5.3. Local environment dependence	559
6. Finite-temperature magnetic properties	561
6.1. Functional integral theory	562
6.2. Spin fluctuation energies in clusters	564
6.3. Short-range magnetic order in transition-metal clusters	567
6.4. Environment dependence of the magnetization curves	568
7. Electron correlation effects in magnetic clusters	572
7.1. Hubbard clusters	572
7.2. Ground-state structure and total spin	574
7.3. Spin excitations and structural fluctuations at finite temperatures	575
7.4. Kondo screening of magnetic impurities in metal clusters	578
8. Conclusion	583
Acknowledgments	584
References	584

Chapter 15 (R. Smith, S.D. Kenny, J.J. Belbruno and R.E. Palmer)

Modelling the structure and dynamics of metal nanoclusters deposited on graphite

1. Introduction	589
2. Ab initio calculations of the interaction of small metal clusters with graphite	591
2.1. Computational methodology	591
2.2. The structure of small isolated Au clusters	592
2.3. Bonding of the clusters to the surface	592
3. Interaction potentials	601
4. The determination of cluster geometries	602
5. Molecular dynamics methodology	604
6. Pinning clusters on surfaces	605
6.1. A simple model for the pinning thresholds	607
7. Low-energy cluster implantation	609
8. Conclusion and future prospects	614
References	615
Index	617
