Part I Turbulent Diffusion Concepts

1	Introduction	3
1.1	Brownian Motion, Random Walks, and Correlation Scales	3
1.2	The Fick Transport Equation	7
1.3	Diffusion and the Characteristic Velocity Scale	10
1.4	Lagrangian Description of Turbulent Diffusion	13
2	Turbulent Diffusion and Scaling	21
2.1	Correlation Functions and Scaling	21
2.2	The Richardson Law and Anomalous Transport	23
2.3	The Kolmogorov Description of Turbulence	26
2.4	Relative Diffusion and Scalings	32
2.5	Cascade Phenomenology and Scalar Spectrum	34
3	Nonlocal Effects and Diffusion Equations	41
3.1	The Einstein Functional Equation	41
3.2	Nonlocality and Levy-Stable Distributions	44
3.3	Fractional Derivatives and Anomalous Diffusion	47
3.4	The Monin Nonlocal Equation	51

Part II Correlation Effects and Scalings

4	Diffusive Renormalization and Correlations	57
4.1	The Corrsin Independence Hypothesis	57
4.2	The Correlation Function and Anomalous Diffusion	60
4.3	Seed Diffusivity and Correlations	62
4.4	Effective Diffusivity and the Peclet Number	64
4.5	Diffusive Renormalization and the Correlation Function	66

5	Diffusion Equations and the Quasilinear Approximation	71
5.1	The Taylor Dispersion	71
5.2	Advection and Scalar Transport	75
5.3	Zeldovich Flow and the Kubo Number	77
5.4	Quasilinear Equations	81
5.5	Short-Range and Long-Range Correlations	83
5.6	The Telegraph Equation	84
6	Return Effects and Random Shear Flows	87
6.1	“Returns” and Correlations	87
6.2	Superdiffusion and Return Effects	90
6.3	Random Shear Flows and Stochastic Equations	93
6.4	The “Manhattan-Grid” Flow and Turbulent Transport	95
7	Turbulence of Magnetic Field Lines	101
7.1	Basic Equations of Plasma	101
7.2	Magnetic Field Evolution and Magnetic Reynolds Number	104
7.3	Magnetic Diffusivity and the Quasilinear Approach	106
7.4	Stochastic Magnetic Field and Transport Scalings	110
7.5	Diffusive Renormalization and a Braided Magnetic Field	112
8	Stochastic Instability and Turbulence	117
8.1	Stochastic Instability and Correlations	117
8.2	Quasilinear Scaling for the Stochastic Instability Increment	119
8.3	The Rechester–Rosenbluth Model	122
8.4	Collisional Effects and Transport	124
8.5	The Quasi-Isotropic Stochastic Magnetic Field	127
9	Anomalous Transport and Convective Cells	131
9.1	Convective Cells and Turbulent Diffusion	131
9.2	Complex Structures and the Statistical Topography	135
9.3	Fluctuation–Dissipative Relation and Turbulent Mixing	136
9.4	Bohm Scaling and Electric Field Fluctuations	138
9.5	Diffusive Renormalization and Correlations	141
Part III Fractals and Percolation Transport		
10	Fractal and Percolation Concepts	147
10.1	Self-Similarity and the Fractal Dimension	147
10.2	Fractality and Anomalous Transport	151
10.3	Turbulence Scalings and Fractality	153
10.4	Percolation Transition and Correlations	157
10.5	Continuum Percolation and Transport	160
10.6	Finite Size Renormalization and Scaling	163

11	Percolation and Turbulent Transport	169
11.1	Random Steady Flows and Seed Diffusivity	169
11.2	Reorganization of Flow Topology and Percolation Scalings	174
11.3	Spatial and Temporal Hierarchy of Scales	178
11.4	Percolation in Drift Flows	181
11.5	Drift and Low-Frequency Regimes	184
11.6	Renormalization and the Stochastic Instability Increment	187
11.7	Stochastic Magnetic Field and Percolation	189
12	Multiscale Approach and Scalings	193
12.1	The Nested Hierarchy of Scales and Drift Effects	193
12.2	The Brownian Landscape and Percolation	196
12.3	Correlations and Transport Scalings	199
12.4	Diffusive Approximation and the Multiscale Model	201
12.5	Stochastic Instability and the Temporal Hierarchy of Scales	203
12.6	Isotropic and Anisotropic Magnetohydrodynamic Turbulence	204
Part IV Trapping and the Escape Probability Formalism		
13	Subdiffusion and Trapping	213
13.1	Diffusion in the Presence of Traps	213
13.2	Trapping and Strong Turbulence	215
13.3	Comb Structures and Transport	218
13.4	Double Diffusion and Return Effects	220
14	Continuous Time Random Walks and Transport Scalings	223
14.1	The Montroll and Weiss Approach and Memory Effects	223
14.2	Fractional Differential Equations	226
14.3	Correlation Function and Waiting Time Distribution	228
14.4	The Klafter Blumen and Shlesinger Approximation	230
14.5	Stochastic Magnetic Field and Balescu Approach	233
14.6	Longitudinal Correlations and the Diffusive Approximation	235
14.7	Vortex Structures and Trapping	238
15	Correlation and Phase-Space	243
15.1	Kinetics and the Diffusion Equation	243
15.2	Phase Space and Transport Scaling	245
15.3	The One-Flight Model and Anomalous Diffusion	247
15.4	Correlations and Nonlocal Velocity Distribution	249
15.5	The Corrsin Conjecture and Phase-Space	252
