Foreword	vii
Preface	ix
1 Introduction to Angle and Spin Resolved Auger Emission	1
2 Theory	11
2.1 The Auger Effect	12
2.1.1 General Considerations	12
2.1.2 Angle and Spin Resolved Auger Emission	13
2.1.3 Coordinate Frame and General Symmetries	14
2.2 General Density Matrix Theory	19
2.2.1 Definition and Basic Relations	19
2.2.2 Tensor Operators and State Multipoles	20
2.2.3 Properties of State Multipoles	21
2.2.4 Wigner–Eckart Theorem	22
2.3 Primary Ionization–Excitation	22
2.3.1 Photoionization	23
2.3.2 Photoexcitation	28
2.3.3 Electron Impact Excitation	29
2.3.4 Electron Impact Ionization	34
2.4 The Auger Emission	37
2.4.1 General Formalism	37
2.5 Angular Distribution and Spin Polarization	42
2.5.1 General Equations	42
2.5.2 Relative Parameters	44
2.5.3 The Case of Electron Impact	51
2.5.4 Generation of Spin Polarization out of Alignment	54
2.5.5 The Case of Photoionization–Excitation	56
2.5.6 Photoionization–Excitation for Arbitrarily Oriented Coordinate Frames	58
2.5.7 Interrelations Between the Angular Distribution and Spin Polarization Parameters of Auger Emission	59

2.6	Resonant Auger Transitions	68	4.5	Correlation Effects for the N _{6,7} O _{4,5} O _{4,5} Auger Transitions of Mercury	144
2.6.1	General Equations for Arbitrarily Oriented Coordinate Frames	69	4.5.1	Calculational Details	144
2.6.2	Simplification of Angular Distribution and Spin Polarization for $\phi = 0$ Geometry	71	4.5.2	Configuration Mixing	145
2.6.3	Special Cases: Unpolarized Photon Beam	71	4.5.3	Relative Intensities	147
2.6.4	Special Cases: Circularly Polarized Photon Beam	72	4.5.4	Angular Distribution – Anisotropy Parameters	149
2.6.5	Special Cases: Linearly Polarized Photon Beam	73	4.5.5	Spin Polarization Parameters	150
2.7	Special Cases of Auger Transitions	77	4.6	Resonant Auger Transitions	152
2.7.1	Spin Polarization of Isotropic Auger Multiplets	77	4.6.1	Angular Anisotropy in the Auger Decay of Resonantly Excited States	152
2.7.2	Intermediate Ionic Hole State with $J = 1$	78	4.6.2	Propensity Rules for Dynamic Spin Polarization Parameters	156
2.7.3	Intermediate Ionic Hole State with $J = 3/2$	79	4.7	Angle and Spin Resolved Analysis of the Resonantly Excited Ar*(2p _{1/2,3/2} ⁻¹ 4s _{1/2}) _{J=1} Auger Decay	163
2.7.4	The Case of an Unresolved Resonance	80	4.7.1	General Considerations	163
2.7.5	Asymmetry Parameters for Auger Emission After Electron Impact	81	4.7.2	Experimental Details and Set-Up	165
2.7.6	Linear Dichroism for Auger Electrons from Unpolarized Targets	88	4.7.3	Determination of Transferred and Dynamic Spin Polarization	166
3	Numerical Methods	91	4.7.4	Numerical Calculation Methods	167
3.1	The ANISO Program	92	4.7.5	Analysis and Comparison of Theoretical and Experimental Data	168
3.1.1	The Bound State Wavefunctions	92	4.7.6	Configuration-Interaction Induced Dynamic Spin Polarization	171
3.1.2	The Model Potential	94	4.7.7	Final Comments	175
3.1.3	Exchange Potentials	97			
3.1.4	The Continuum Wavefunction	98			
3.1.5	Calculation of the Scattering Phase	102			
3.1.6	The Anisotropy Parameters	102			
3.1.7	The Reduced Matrix Elements	103			
3.1.8	The Slater Integrals	109			
3.2	The Extended RATR Program	110			
3.2.1	Properties of the RATR Package	111			
3.2.2	Application Modes of RATR	114			
3.2.3	Influence of Relativistic and Exchange Effects	115			
4	Applications and Examples	117			
4.1	Angular Anisotropy of Auger Electrons from Noble Gas Atoms	119			
4.1.1	Anisotropy Parameters	120			
4.2	Complete Data Sets for Auger Electrons from Noble Gases	123			
4.2.1	Spin Polarization Parameters β_1 and γ_1	125			
4.2.2	Observable Degree of Spin Polarization	127			
4.2.3	Complete Data Sets for the Considered Auger Transitions	130			
4.3	Intrinsic Spin Polarization for Isotropic Auger Multiplets	133			
4.4	Spin Polarization for the Xe M _{4,5} N _{4,5} N _{4,5} Auger Spectrum	140			
4.4.1	Complete Data Sets	140			
4.4.2	Comparison with Experimental Data	142			
5	Molecular Auger Processes	211			
5.1	Angular Distribution of Molecular Auger Electrons	213			
5.1.1	Basic Framework	213			
5.1.2	Characterization of the Molecular Ensemble M ⁺	214			
5.1.3	Angular Distribution of Molecular Auger Electrons	218			
5.2	Spin Polarization of Molecular Auger Electrons	220			
5.2.1	General Expressions	220			

5.2.2	Unpolarized Electron Beam	222
5.2.3	Transversely Polarized Electron Beam	222
5.2.4	Neglect of Spin–Orbit Interaction	223
5.3	Application and Examples	223
5.3.1	General Features of the Auger Angular Distribution	223
5.3.2	The Problem of Factorization	223
5.3.3	Significance of the Coherence Terms	224
5.4	Numerical Values for the Anisotropy Parameters	226
5.4.1	Numerical Methods	226
5.4.2	Calculations for HF	227
5.5	Angular Distribution of Auger Electrons from Polyatomic Molecules	229
5.5.1	General Remarks	229
5.5.2	Basic Framework	230
5.5.3	Characterization of the Molecular Ensemble M^+ with Non-Degenerate Point Groups	232
5.5.4	Angular Distribution of Auger Electrons from Molecular Non-Degenerate Point Groups	236
5.5.5	Angular Anisotropy of Auger Electrons from Molecular Ensembles with Degenerate Point Groups	239
6	Conclusion and Outlook	245
A	Vector Addition Coefficients of Angular Momenta	253
A.1	Clebsch–Gordan Coefficients and $3j$ -Symbols	253
A.2	Racah Coefficients and $6j$ -Symbols	255
A.3	$9j$ -Symbols	258
B	Rotation Matrices and Spherical Harmonics	263
B.1	Transformation Properties of Angular Momentum Under Rotation	263
B.2	Symmetry Properties of Rotation Matrices	265
B.3	The Clebsch–Gordan Series and its Inverse	266
B.4	Integrals Over Rotation Matrices	267
B.5	Relation with the Spherical Harmonics	268
B.6	Left–Right Asymmetry of Rotation Matrices	269
C	Irreducible Tensorial Sets	273
C.1	Definition and Basic Properties	273
C.2	Tensorial Products of Irreducible Tensor Operators	275
D	Expansion of Dipole Matrix Elements	279
E	Anisotropy Parameters for Electron Impact Ionization	281
E.1	Expansion of Matrix Elements	281
E.2	Derivation of Anisotropy Parameters	282
