

CONTENTS

<i>About the Author</i>	ix
<i>Preface</i>	xi
<i>Acknowledgment</i>	xv
1 Energy Consumption, Reserves, Depletion, and Environmental Issues	
I. Introduction	1
II. Historical Energy Consumption Patterns	2
III. Fossil Fuel Reserves and Depletion	10
IV. Environmental Issues	19
References	27
2 Biomass as an Energy Resource: Concept and Markets	
I. Introduction	29
II. Basic Concept	30
III. Distribution of Renewable Carbon Resources and Biomass Abundance	32
IV. Energy Potential of Biomass	38
V. Market Penetration	46
References	50
3 Photosynthesis of Biomass and Its Conversion-Related Properties	
I. Introduction	51

II. Photosynthesis	52
III. Biomass Composition and Energy Content	72
References	88
4 Virgin Biomass Production	
I. Introduction	91
II. Climatic and Environmental Factors	92
III. Availability of Land and Water Areas for Biomass Production	104
IV. Selection of Virgin Biomass Species for Energy Applications	108
V. The Economics of Virgin Biomass Production	119
VI. Research on Virgin Biomass Production	126
References	133
5 Waste Biomass Abundance, Energy Potential, and Availability	
I. Introduction	137
II. Municipal Wastes	138
III. Agricultural Solid Wastes	142
IV. Forestry Residues	151
V. Industrial Wastes	153
VI. Future Role of Waste Biomass as an Energy Resource	155
References	157
6 Physical Conversion Processes	
I. Introduction	159
II. Dewatering and Drying	160
III. Size Reduction	173
IV. Densification	177
V. Separation	182
References	188
7 Thermal Conversion: Combustion	
I. Introduction	191
II. Fundamentals	192
III. Equipment and Applications	199
IV. Environmental Issues	213
References	222

8 Thermal Conversion: Pyrolysis and Liquefaction	
I. Introduction	225
II. Fundamentals	226
III. Processes	240
IV. Miscellaneous Liquefaction Methods	256
V. Comparison of Pyrolytic and Nonpyrolytic Liquids	260
References	266
9 Thermal Conversion: Gasification	
I. Introduction	271
II. Fundamentals	272
III. Coal Gasification	274
IV. Biomass Gasification	289
V. Commercial and Near-Commercial Biomass Gasification Methods	303
References	327
10 Natural Biochemical Liquefaction	
I. Introduction	333
II. Sources	335
III. Conversion Chemistry	357
IV. Processes and Economics	365
References	379
11 Synthetic Oxygenated Liquid Fuels	
I. Introduction	383
II. History of Alcohol Motor Fuel Development	385
III. Properties of Oxygenates	390
IV. Production of Oxygenates	405
V. Economic Factors	433
References	439
12 Microbial Conversion: Gasification	
I. Introduction	445
II. Methane Fermentation	447
III. Microbial Hydrogen	463
IV. Anaerobic Digestion System Characteristics	470
V. Commercial Development	481
References	491

13 Organic Commodity Chemicals from Biomass	
I. Introduction	495
II. Commercial Organic Chemicals and Products	497
III. Biomass as Feedstock for Synthetic Organic Chemicals	507
References	543
14 Integrated Biomass Production–Conversion Systems and Net Energy Production	
I. Introduction	547
II. Integrated Systems	549
III. Net Energy Production	567
References	589
<i>Epilogue</i>	593
<i>Appendix A</i>	
Units and Conversion Factors	595
<i>Appendix B</i>	
Calculation of Fossil Fuel Reserves Depletion Times	605
<i>Appendix C</i>	
Carbon Dioxide Emissions from Fossil Fuel Combustion, and Human and Animal Respiration	607
<i>Index</i>	609
