Preface	vii
1. A Brutal Fact of Life	1
1.1 Causality and determinism	1
1.2 Bell's inequality: No hidden determinism	4
1.3 Remarks on terminology	8
2. Kinematics: How Quantum Systems are Described	11
2.1 Stern–Gerlach experiment	11
2.2 Successive Stern–Gerlach measurements	14
2.3 Order matters	17
2.4 Mathematization	17
2.5 Probabilities and probability amplitudes	23
2.6 Quantum Zeno effect	32
2.7 Kets and bras	35
2.8 Brackets, bra-kets, and ket-bras	38
2.9 Pauli operators, Pauli matrices	41
2.10 Functions of Pauli operators	44
2.11 Eigenvalues, eigenkets, eigenbras	46
2.12 Wave-particle duality	51
2.13 Expectation value	51
2.14 Trace	54
2.15 Statistical operator	56
2.16 Mixtures and blends	60
2.17 Nonselective measurement	61
2.18 Entangled atom pairs	63

2.19 State reduction . . . . .	68	5.2.1 Energy eigenstates . . . . .	160
2.20 Measurements with more than two outcomes . . . . .	70	5.2.2 Limit of no force . . . . .	162
2.21 Unitary operators . . . . .	75	5.3 Harmonic oscillator . . . . .	165
2.22 Hermitian operators . . . . .	78	5.3.1 Energy eigenstates: Power-series method . . . . .	165
3. Dynamics: How Quantum Systems Evolve . . . . .	81	5.3.2 Energy eigenstates: Ladder-operator approach . . . . .	170
3.1 Schrödinger equation . . . . .	81	5.3.3 Hermite polynomials . . . . .	176
3.2 Heisenberg equation . . . . .	85	5.3.4 Infinite matrices . . . . .	177
3.3 Equivalent Hamilton operators . . . . .	87	5.4 Delta potential . . . . .	181
3.4 von Neumann equation . . . . .	88	5.4.1 Bound state . . . . .	181
3.5 Example: Larmor precession . . . . .	89	5.4.2 Scattering states . . . . .	186
3.6 Time-dependent probability amplitudes . . . . .	93	5.5 Square-well potential . . . . .	191
3.7 Schrödinger equation for probability amplitudes . . . . .	94	5.5.1 Bound states . . . . .	191
3.8 Time-independent Schrödinger equation . . . . .	98	5.5.2 Delta potential as a limit . . . . .	196
3.9 Example: Two magnetic silver atoms . . . . .	101	5.5.3 Scattering states. Tunneling . . . . .	197
4. Motion along the $x$ Axis . . . . .	109	Index . . . . .	203
4.1 Kets, bras, wave functions . . . . .	109		
4.2 Position operator . . . . .	114		
4.3 Momentum operator . . . . .	117		
4.4 Heisenberg's commutation relation . . . . .	119		
4.5 Position-momentum transformation function . . . . .	119		
4.6 Expectation values . . . . .	122		
4.7 Uncertainty relation . . . . .	125		
4.8 State of minimum uncertainty . . . . .	129		
4.9 Time dependence . . . . .	132		
4.10 Excursion into classical mechanics . . . . .	132		
4.11 Hamilton operator, Schrödinger equation . . . . .	136		
4.12 Time transformation function . . . . .	139		
5. Elementary Examples . . . . .	141		
5.1 Force-free motion . . . . .	141		
5.1.1 Time-transformation functions . . . . .	141		
5.1.2 "Spreading" of the wave function . . . . .	143		
5.1.3 Long-time and short-time behavior . . . . .	149		
5.1.4 Interlude: General position-dependent force . . . . .	155		
5.1.5 Energy eigenstates . . . . .	157		
5.2 Constant force . . . . .	160
