Preface	vii
1. Quantum Kinematics Reviewed	1
1.1 Schrödinger's wave function	1
1.2 Digression: Vectors, coordinates, and all that	3
1.3 Dirac's kets and bras	10
1.4 xp transformation function	16
1.5 Position operator, momentum operator, functions of them .	20
1.6 Traces and statistical operators	24
1.7 Algebraic completeness of operators X and P	32
1.8 Weyl commutator, Baker–Campbell–Hausdorff relations . .	37
2. Quantum Dynamics Reviewed	41
2.1 Temporal evolution	41
2.2 Time transformation functions	49
3. Examples	53
3.1 Force-free motion	53
3.1.1 Time-dependent spreads	58
3.1.2 Uncertainty ellipse	60
3.2 Constant force	63
3.3 Time-dependent force	67
3.4 Harmonic oscillator	72
3.4.1 Ladder operators	78
3.4.2 Coherent states	84
3.4.3 Completeness of the coherent states	88

3.4.4	Fock states and coherent states	90
3.4.5	Time dependence	92
3.5	Two-dimensional harmonic oscillator	98
3.5.1	Isotropy	98
3.5.2	Eigenstates	102
4.	Orbital Angular Momentum	107
4.1	Commutation relations	107
4.2	Eigenvalues and eigenstates	113
4.3	Differential operators. Polar coordinates	117
4.4	Differential operators. Spherical coordinates	120
5.	Hydrogen-like Atoms	125
5.1	Hamilton operator, Schrödinger equation	125
5.2	Wave functions	129
5.2.1	Two-dimensional harmonic oscillator	129
5.2.2	Hydrogenic atoms	133
6.	Approximation Methods	139
6.1	Hellmann–Feynman theorem	139
6.2	Virial theorem	142
6.3	Rayleigh–Ritz variational method	145
6.4	Rayleigh–Schrödinger perturbation theory	153
6.5	Brillouin–Wigner perturbation theory	159
6.6	Perturbation theory for degenerate states	164
6.7	Linear Stark effect	166
6.8	WKB approximation	172
	Index	185
