<b>PREFACE</b>	<b>xi</b>
<b>AUTHOR</b>	<b>xiii</b>
<b>1 INTRODUCTION</b>	<b>1</b>
1.1 Overview . . . . .	1
1.2 Plasma frequency . . . . .	2
1.3 Debye length . . . . .	2
1.4 Plasma parameter . . . . .	4
1.5 Distribution functions . . . . .	5
1.5.1 Moments of the distribution function . . . . .	6
1.5.2 Magnetic pressure . . . . .	7
1.6 Cyclotron frequencies . . . . .	7
1.7 Collisions . . . . .	8
1.7.1 Binary Coulomb collisions . . . . .	8
1.7.2 Deflection by multiple Coulomb collisions . . . . .	11
1.7.3 Charge-neutral collisions . . . . .	13
1.7.4 Charge-exchange collisions . . . . .	14
1.8 Particle drifts . . . . .	14
1.9 Waves . . . . .	15
1.9.1 Sound waves . . . . .	16
1.9.2 Electromagnetic waves . . . . .	16
1.9.3 Alfvén waves . . . . .	17
1.9.4 Electrostatic waves . . . . .	18
1.9.5 Plasma waves . . . . .	18
1.9.6 Bernstein waves . . . . .	18
1.9.7 Wave damping . . . . .	18
1.9.8 Large amplitude waves . . . . .	19
1.10 Plasma radiation . . . . .	19
1.10.1 Bremsstrahlung . . . . .	19
1.10.2 Blackbody radiation . . . . .	20
1.10.3 Impurity radiation . . . . .	20
1.10.4 Cyclotron or synchrotron radiation . . . . .	20
1.10.5 Cherenkov radiation . . . . .	20

<b>2 BASIC KINETIC EQUATIONS</b>	<b>21</b>
2.1 The Klimontovich equation . . . . .	21
2.1.1 Introduction . . . . .	21
2.1.2 The density function . . . . .	21
2.1.3 The Klimontovich equation . . . . .	22
2.1.4 Kinetic equation . . . . .	23
2.2 The Liouville equation . . . . .	26
2.2.1 Introduction . . . . .	26
2.2.2 Liouville equation — standard form . . . . .	27
2.3 System ensembles . . . . .	28
2.3.1 BBGKY hierarchy . . . . .	29
2.3.2 Truncating the BBGKY hierarchy . . . . .	33
<b>3 THE LENARD-BALESCU EQUATION</b>	<b>39</b>
3.1 Bogolyubov's hypothesis . . . . .	39
3.2 Solution via Fourier and Laplace transforms . . . . .	41
3.2.1 Transforming the evolution equations . . . . .	43
3.2.2 Inverting the operators . . . . .	45
3.2.3 Integrating over $p_2$ . . . . .	46
3.2.4 Integrating over $p_1$ . . . . .	48
3.2.5 Integrating over $\mathbf{k}$ . . . . .	51
3.3 The Fokker-Planck equation . . . . .	52
3.4 Dynamic friction and diffusion . . . . .	53
3.4.1 Runaway electrons in a steady electric field . . . . .	54
3.4.2 Resonant wave heating . . . . .	58
<b>4 THE VLASOV-MAXWELL EQUATIONS</b>	<b>69</b>
4.1 Electrostatic waves in an unmagnetized plasma . . . . .	69
4.1.1 Vlasov method . . . . .	70
4.1.2 Landau solution . . . . .	73
4.2 Effects of collisions on Landau damping . . . . .	79
4.3 The Debye potential . . . . .	82
4.3.1 Potential of a stationary test charge . . . . .	82
4.3.2 Average potential of thermal test charges . . . . .	84
<b>5 WAVES IN A MAGNETIZED HOT PLASMA</b>	<b>89</b>
5.1 The hot plasma dielectric tensor . . . . .	89
5.1.1 The evolution of the distribution function . . . . .	89
5.1.2 Integrating along the unperturbed orbits . . . . .	91
5.1.3 General $f_0(v_\perp, v_z)$ . . . . .	93
5.1.4 Maxwellian distributions . . . . .	96
5.1.5 The dielectric tensor . . . . .	100
5.1.6 The hot plasma dispersion relation . . . . .	103
5.1.7 Examples of hot plasma wave effects . . . . .	103
5.2 Electrostatic waves . . . . .	107

5.2.1 Electrostatic dispersion relation . . . . .	107
5.2.2 Perpendicular propagation – Bernstein modes . . . . .	109
5.3 Velocity space instabilities . . . . .	110
5.3.1 Anisotropic temperature . . . . .	110
5.3.2 Bump-on-the-tail instability . . . . .	112
5.4 Conservation of energy and power flow . . . . .	114
5.4.1 Poynting's theorem for kinetic waves . . . . .	114
5.4.2 Group velocity and kinetic flux . . . . .	116
5.5 Collisional effects . . . . .	119
5.5.1 Collisions via the Krook model . . . . .	119
5.5.2 Collisions via a Fokker-Planck model . . . . .	119
5.6 Relativistic plasma effects . . . . .	120
5.6.1 The relativistic dielectric tensor . . . . .	121
5.6.2 The relativistic dielectric tensor without sums . . . . .	124
5.6.3 The weakly relativistic dielectric tensor . . . . .	125
5.6.4 Moderately relativistic expressions . . . . .	128
5.6.5 Exact expressions with $n_{\parallel} = 0$ . . . . .	130
5.6.6 The relativistic $X$ -wave . . . . .	134
<b>6 MOMENT EQUATIONS AND FLUID PLASMAS</b>	<b>137</b>
6.1 Moments of the distribution function . . . . .	138
6.1.1 The simple moment equations . . . . .	138
6.1.2 Plasma oscillations . . . . .	140
6.1.3 The kinetic moment equations . . . . .	143
6.2 The fluid equations . . . . .	146
6.3 Low frequency waves . . . . .	147
6.3.1 The low frequency dispersion relation . . . . .	147
6.3.2 Stringer diagrams . . . . .	150
6.4 High frequency waves . . . . .	151
6.4.1 Warm plasma dispersion relation . . . . .	151
6.4.2 Electrostatic dispersion relation . . . . .	157
6.4.3 Parallel and perpendicular propagation . . . . .	162
6.4.4 Summary of fluid waves . . . . .	162
<b>7 TRANSPORT IN A NONUNIFORM GAS</b>	<b>165</b>
7.1 Boltzmann equation . . . . .	165
7.2 Collision symmetries . . . . .	167
7.3 Collision theorems . . . . .	170
7.4 The equilibrium state . . . . .	171
7.5 The mean free time theory . . . . .	176
7.6 The formal theory of kinetic processes . . . . .	181
7.7 Results of the variational procedure . . . . .	189

<b>8 TRANSPORT IN A NONUNIFORM BINARY GAS</b>	<b>197</b>
8.1 The Boltzmann equations . . . . .	197
8.2 The equations of hydrodynamics . . . . .	198
8.3 The collision terms . . . . .	202
8.4 The equilibrium state . . . . .	205
8.5 The formal theory of kinetic processes . . . . .	207
8.6 The variation method . . . . .	219
8.6.1 Definition of $\{G; H\}$ . . . . .	221
8.6.2 The Davison function . . . . .	222
8.7 Results . . . . .	223
8.7.1 Viscosity . . . . .	223
8.7.2 Diffusion and electrical conductivity . . . . .	225
8.7.3 Thermal conduction . . . . .	229
<b>9 TRANSPORT WITH A FINITE MAGNETIC FIELD</b>	<b>233</b>
9.1 Boltzmann equations . . . . .	233
9.2 The magnetohydrodynamic (MHD) equations . . . . .	234
9.3 The formal theory of kinetic processes . . . . .	236
9.4 Solutions for the electrical conductivity . . . . .	251
9.4.1 Solving for the $e_i^m$ . . . . .	253
9.5 Thermal conductivity and diffusion . . . . .	258
9.5.1 Variational results . . . . .	258
9.5.2 The transport coefficients . . . . .	260
9.5.3 Convergence and accuracy . . . . .	262
9.6 The pressure tensor . . . . .	262
9.6.1 Solving for $G_i$ . . . . .	270
9.6.2 The pressure tensor elements . . . . .	271
9.7 Summary of results . . . . .	276
<b>A MATHEMATICAL FUNCTIONS</b>	<b>283</b>
A.1 The plasma dispersion function . . . . .	283
A.1.1 Definition of the plasma dispersion function . . . . .	283
A.1.2 Relation to the error function for complex argument .	284
A.1.3 Relation to the $Y$ function . . . . .	287
A.1.4 Relation to the $W$ function . . . . .	287
A.2 Relativistic plasma dispersion functions . . . . .	288
A.2.1 Weakly relativistic dispersion function . . . . .	288
A.2.2 Generalized relativistic dispersion function . . . .	289
A.3 Gamma Function, $\Gamma(z)$ . . . . .	290
A.3.1 Definition . . . . .	290
A.3.2 Incomplete gamma function . . . . .	291
A.4 Generalized hypergeometric functions . . . . .	292
A.4.1 Hypergeometric function integrals — first type . .	292
A.4.2 Hypergeometric function integrals — second type .	293
A.5 Vector identities . . . . .	293

A.5.1 Products of three vectors . . . . .	293
A.5.2 Vector identities with the $\nabla$ operator . . . . .	294
<b>B COLLISION INTEGRALS</b>	<b>295</b>
B.1 Rutherford scattering . . . . .	295
B.2 Collision integrals . . . . .	299
<b>C NOTATION AND LIST OF SYMBOLS</b>	<b>309</b>
C.1 Mathematical notation . . . . .	309
C.2 List of symbols . . . . .	310
<b>Bibliography</b>	<b>315</b>
<b>Index</b>	<b>319</b>
