# *Contents*

---

<b>1</b>	<b>Introduction</b> .....	1
1.1	Plasma and Its Classification .....	1
1.2	Application of Low-Temperature Plasma .....	2
1.3	Academic Fusion .....	3
	References .....	4
<b>2</b>	<b>Phenomenological Description of the Charged Particle Transport</b> .....	5
2.1	Transport in Real (Configuration) Space .....	5
2.1.1	Momentum Balance of Electrons .....	6
2.1.2	Energy Balance of Electrons .....	7
2.2	Transport in Velocity Space .....	10
2.2.1	Electron Velocity Distribution and Swarm Parameters .....	10
2.2.2	Ion Velocity Distribution and Mean Energy .....	18
2.3	Thermal Equilibrium and Its Governing Relations .....	20
2.3.1	Boltzmann Distribution in Real Space .....	21
2.3.2	Maxwell Distribution in Velocity Space .....	22
	References .....	25
<b>3</b>	<b>Macroscopic Plasma Characteristics</b> .....	27
3.1	Introduction .....	27
3.2	Quasi-Neutrality .....	27
3.3	Charge-Separation in Plasmas .....	28
3.3.1	Spatial Scale of Charge-Separation .....	28
3.3.2	Time Scale for Charge-Separation .....	29
3.4	Plasma Shielding .....	30
3.4.1	Debye Shielding .....	30
3.4.2	Metal Probe in a Plasma .....	31
3.5	Particle Diffusion .....	34
3.5.1	Ambipolar Diffusion .....	34
3.5.2	Spatial and Time Scale of Diffusion .....	35
3.6	Bohm Sheath Criterion .....	37
3.6.1	Bohm Velocity .....	37
3.6.2	Floating Potential .....	38
	References .....	39

<b>4</b>	<b>Elementary Processes in Gas Phase and on Surfaces</b> .....	41		
4.1	Particles and Waves.....	42		
4.1.1	Particle Representation in Classical and Quantum Mechanics.....	42		
4.1.2	Locally Isolated Particle Group and Wave Packets.....	44		
4.2	Collisions and Cross Sections.....	46		
4.2.1	Conservation Laws in Collisions.....	47		
4.2.2	Definition of Collision Cross Sections.....	49		
4.2.3	The Distribution of Free Paths.....	53		
4.2.4	Representation of Collisions in Laboratory and CM Reference Frames.....	54		
4.3	Classical Collision Theory.....	57		
4.3.1	Scattering in Classical Mechanics.....	58		
4.3.2	Conditions for the Applicability of the Classical Scattering Theory.....	64		
4.4	Quantum Theory of Scattering.....	64		
4.4.1	Differential Scattering Cross Section $\sigma(\theta)$ .....	66		
4.4.2	Modified Effective Range Theory in Electron Scattering.....	71		
4.5	Collisions between Electrons and Neutral Atoms/Molecules.....	72		
4.5.1	Resonant Scattering.....	73		
4.6	Electron-Atom Collisions.....	75		
4.6.1	Energy Levels of Atoms.....	75		
4.6.2	Electron-Atom Scattering Cross Sections.....	77		
4.7	Electron-Molecule Collisions.....	81		
4.7.1	Rotational, Vibrational, and Electronic Energy Levels of Molecules.....	81		
4.7.2	Rotational Excitation.....	83		
4.7.2.1	Rotational Energy Levels.....	83		
4.7.2.2	Rotational Excitation Cross Sections.....	84		
4.7.3	Vibrational Excitation.....	87		
4.7.3.1	Vibrational Energy Levels.....	87		
4.7.3.2	Vibrational Cross Sections.....	88		
4.7.4	Electronic Excitation and Dissociation.....	89		
4.7.4.1	Electronic States of Molecules.....	89		
4.7.4.2	Cross Sections for Electronic Excitation of Molecules.....	91		
4.7.5	Electron Collisions with Excited Atoms and Molecules.....	92		
4.8	Nonconservative Collisions of Electrons with Atoms and Molecules.....	95		
4.8.1	Electron-Induced Ionization.....	95		
4.8.2	Electron Attachment.....	97		
4.8.2.1	Dissociative Electron Attachment.....	99		
4.8.2.2	Nondissociative Electron Attachment.....	100		
4.8.2.3	Ion Pair Formation.....	101		
4.8.2.4	Electron Attachment to Excited Molecules.....	101		
4.8.2.5	Rate Coefficients for Attachment.....	102		
4.8.3	Electron-Ion and Ion-Ion Recombination.....	103		
4.8.4	Electron-Ion and Electron-Electron Collisions.....	105		
4.9	Heavy Particle Collisions.....	105		
4.9.1	Ion-Molecule Collisions.....	106		
4.9.1.1	Charge Transfer, Elastic, and Inelastic Scattering of Ions.....	106		
4.9.1.2	Ion-Molecule Reactions.....	109		
4.9.2	Collisions of Fast Neutrals.....	110		
4.9.3	Collisions of Excited Particles.....	111		
4.9.3.1	Chemi-Ionization and Penning Ionization.....	112		
4.9.4	Collisions of Slow Neutrals and Rate Coefficients.....	116		
4.9.4.1	Quenching and Transport of Excited States.....	116		
4.9.4.2	Kinetics of Rotational and Vibrational Levels.....	118		
4.10	Photons in Ionized Gases.....	119		
4.10.1	Emission and Absorption of Line Radiation.....	119		
4.10.2	Resonant Radiation Trapping.....	122		
4.11	Elementary Processes at Surfaces.....	123		
4.11.1	Energy Levels of Electrons in Solids.....	124		
4.11.2	Emission of Electrons from Surfaces.....	127		
4.11.2.1	Photo-Emission.....	127		
4.11.2.2	Thermionic Emission.....	128		
4.11.2.3	Field-Induced Emission.....	129		
4.11.2.4	Potential Ejection of Electrons from Surfaces by Ions and Excited Atoms.....	132		
4.11.3	Emission of Ions and Neutrals from Surfaces.....	135		
4.11.3.1	Surface Neutralization.....	136		
4.11.3.2	Surface Ionization.....	136		
4.11.4	Adsorption.....	138		
	References.....	140		
<b>5</b>	<b>The Boltzmann Equation and Transport Equations of Charged Particles</b> .....	143		
5.1	Introduction.....	143		
5.2	The Boltzmann Equation.....	143		
5.2.1	Transport in Phase Space and Derivation of the Boltzmann Equation.....	144		
5.3	Transport Coefficients.....	146		
5.4	The Transport Equation.....	150		
5.4.1	Conservation of Number Density.....	151		
5.4.2	Conservation of Momentum.....	151		
5.4.3	Conservation of Energy.....	153		
5.5	Collision Term in the Boltzmann Equation.....	153		

5.5.1	Collision Integral	153	7.4	Hybrid Models	220
5.5.2	Collision Integral between an Electron and a Gas Molecule	154	7.5	Circuit Model	221
5.5.2.1	Elastic Collision Term $J_{elas}$	155	7.5.1	Equivalent Circuit Model in CCP	221
5.5.2.2	Excitation Collision Term $J_{ex}$	158	7.5.2	Equivalent Circuit Model in ICP	223
5.5.2.3	Ionization Collision Term $J_{ion}$	158	7.5.3	Transmission-Line Model (TLM)	224
5.5.2.4	Electron Attachment Collision Term $J_{att}$	159	7.6	Electromagnetic Fields and Maxwell's Equations	225
5.6	Boltzmann Equation for Electrons	160	7.6.1	Coulomb's Law, Gauss's Law, and Poisson's Equation	225
5.6.1	Spherical Harmonics and Their Properties	160	7.6.2	Faraday's Law	226
5.6.2	Velocity Distribution of Electrons	163	7.6.3	Ampere's Law	227
5.6.2.1	Velocity Distribution under Uniform Number Density: $g^0$	164	7.6.4	Maxwell's Equations	228
5.6.2.2	Velocity Distribution Proportional to $\nabla_r n(r, t): g^1$	165	References	228	
5.6.3	Electron Transport Parameters	170	<b>8 Numerical Procedure of Modeling</b>	231
