	1.2	•	ture and Contents of the Book	3		
	Bibl	liograp	ohy	9		
2	Stat	istical	Analysis of Homogeneous Turbulent Flows: Reminders	10		
	2.1	Back	ground Deterministic Equations	10		
		2.1.1	Mass Conservation	10		
		2.1.2	The Navier-Stokes Momentum Equations	12		
		2.1.3	Incompressible Turbulence	13		
		2.1.4	First Insight into Compressibility Effects	14		
		2.1.5	Reminder About Circulation and Vorticity	15		
		2.1.6	Adding Body Forces or Mean Gradients	16		
	2.2	Briefs	s About Statistical and Probabilistic Approaches	19		
		2.2.1	Ensemble Averaging, Statistical Homogeneity	19		
		2.2.2	Single-Point and Multipoint Moments	19		
		2.2.3	Statistics for Velocity Increments	20		
		2.2.4	Application of Reynolds Decomposition to Dynamical			
			Equations	20		
	2.3	olds Stress Tensor and Related Equations	22			
		2.3.1	RST Equations	22		
		2.3.2	The Mean Flow Consistent With Homogeneity	24		
		2.3.3	Homogeneous RST Equations. Briefs About Closure Method	ls 26		
	2.4	2.4 Anisotropy in Physical Space. Single-Point and Two-Point				
	Correlations					
	2.5	_	ral Analysis, From Random Fields to Two-Point			
		Corre	lations. Local Frame, Helical Modes	28		
		2.5.1	Second-Order Statistics	28		
		2.5.2	Poloidal-Toroidal Decomposition and Craya-Herring			
			Frame of Reference	31		
		2.5.3	Helical-Mode Decomposition	32		
		2.5.4	Use of Projection Operators	33		
		2.5.5	Nonlinear Dynamics	35		
		2.5.6	Background Nonlinearity in Different Reference			
			Frames	36		

2.6.2 Some Comments About Higher-Order Statistics 2.7 A Synthetic Scheme of the Closure Problem: Nonlinearity and Nonlocality 43 3.7.1 On Vortices, Scales, Wavenumbers, and Wave Vectors—What are the Small Scales? Bibliography . 47 3.7.2 Is There an Energy Cascade in the Physical Space? 3 Incompressible Homogeneous Isotropic Turbulence . 49 3.7.3 Self-Amplification of Velocity Gradients 3.10 Observations and Measures in Forced and Freely Decaying Turbulence . 49 3.7.4 Non-Gaussianity and Depletion of Nonlinearity Turbulence . 49 3.7.8 Non-Gaussianity and Depletion of Nonlinearity 3.1.1 How to Generate Isotropic Turbulence? . 49 3.7.1 Influence of the Space Dimensional Navier—Stokes Turbulence? . 3.1.2 Main Observed Statistical Features of Developed . 3.1.2 Energy Decay Regimes . 57 3.8.2 Pure 2D Turbulence and Dual Cascade . 3.1.4 Coherent Structures in Isotropic Turbulence . 51 3.8.2 Pure 2D Turbulence and Dual Cascade . 3.1.4 Coherent Structures in Isotropic Turbulence . 58 3.8.3 Role of Pressure: A View of Burgers' Turbulence . 58 3.8.1 Sensitivity with Respect to Energy-Pumping Process: Turbulence with Hyperviscosity . 59 Bibliography	98
