<i>Preface</i>	xi
1 Introduction	1
Part I Setting the scene	5
2 Sites of activity	7
2.1 Geospace	7
2.2 Solar atmosphere	16
2.3 Other sites	22
3 Plasma models	25
3.1 Single particle motion	26
3.2 Kinetic models	29
3.3 Fluid models	35
3.4 Chew–Goldberger–Low momentum equation	39
3.5 On the validity of MHD models for space plasmas	40
3.6 Electron magnetohydrodynamics, Hall current	41
3.7 Initial and boundary conditions	42
3.8 Conservation laws	42
3.9 Discontinuities	48
Part II Quiescence	55
4 Introduction	57
5 Magnetohydrostatic states	61
5.1 General properties	61
5.2 Symmetric MHS states	76
5.3 Examples of exact solutions	85
5.4 Asymptotic expansions	93

6	Particle picture of steady states	107	12	Aspects of bifurcation and nonlinear dynamics	343
6.1	General properties	107	12.1	Bifurcation	343
6.2	Systems with translational invariance	108	12.2	A statistical mechanics approach to 2D current sheet bifurcation	355
6.3	Adiabatic particle motion	114	12.3	Role of perturbations	361
6.4	Regular and chaotic particle motion	116	12.4	Self-organized criticality	364
7	A unified theory of steady states	123	12.5	Low-dimensional modelling	364
7.1	Steady states without gravity	124			
7.2	Inclusion of the gravity force	127			
7.3	Symmetric states	129			
8	Quasi-static evolution and the formation of thin current sheets	133		Part IV Applications	367
8.1	Introduction	133	13	Magnetospheric activity	371
8.2	Perturbed Harris sheet	135	13.1	Interaction between the solar wind and the magnetosphere	371
8.3	MHD tail model with flux transfer	140	13.2	Convection and pressure crisis	378
8.4	TCS from boundary deformation	151	13.3	Magnetospheric substorms	385
8.5	Vlasov approach to quasi-static evolution	156	13.4	Further large-scale processes	398
8.6	Further aspects	168	13.5	Statistical and nonlinear dynamics aspects	400
			13.6	Discussion	403
	Part III Dynamics	181	14	Models of solar activity	407
9	Nonideal effects	185	14.1	General aspects	407
9.1	Generalized Ohm's law	185	14.2	Model constraints and boundary conditions	412
9.2	Resistivity	187	14.3	Arcade models of solar flares	416
9.3	Microturbulence	190	14.4	Coronal mass ejections	424
9.4	Non-turbulent kinetic effects	200	14.5	Further aspects	431
10	Selected macroinstabilities	203	15	Discussion	433
10.1	Stability concepts	203	15.1	The reconnection problem	433
10.2	Ideal MHD stability	204	15.2	A general eruption scheme	438
10.3	The resistive tearing instability	235			
10.4	Collisionless tearing	249	<i>Appendix 1</i>	Unified theory: details and derivations	441
10.5	Variational principle for 2D collisionless plasmas	254	<i>Appendix 2</i>	Variational principle for collisionless plasmas	451
11	Magnetic reconnection	269	<i>Appendix 3</i>	Symbols and fundamental constants	465
11.1	Introduction	269	<i>References</i>		469
11.2	Two-dimensional fluid models	271	<i>Index</i>		503
11.3	Kinetic reconnection in 2D collisionless plasmas	297			
11.4	Inclusion of the third dimension	305			
11.5	Kinematics of 3D reconnection	311			
11.6	Remark on relativistic covariance	340
