## Part I. Introduction

---

<b>Prologue</b> .....	1
<b>1. Mathematical Principles of Modern Natural Philosophy</b> .	11
1.1 Basic Principles .....	12
1.2 The Infinitesimal Strategy and Differential Equations .....	14
1.3 The Optimality Principle .....	14
1.4 The Basic Notion of Action in Physics and the Idea of Quantization .....	15
1.5 The Method of the Green's Function .....	17
1.6 Harmonic Analysis and the Fourier Method .....	21
1.7 The Method of Averaging and the Theory of Distributions .	26
1.8 The Symbolic Method .....	28
1.9 Gauge Theory – Local Symmetry and the Description of Interactions by Gauge Fields .....	34
1.10 The Challenge of Dark Matter .....	46
<b>2. The Basic Strategy of Extracting Finite Information from   Infinities – Ariadne's Thread in Renormalization Theory</b>	47
2.1 Renormalization Theory in a Nutshell .....	48
2.1.1 Effective Frequency and Running Coupling Constant of an Anharmonic Oscillator .....	48
2.1.2 The Zeta Function and Riemann's Idea of Analytic Continuation .....	54
2.1.3 Meromorphic Functions and Mittag-Leffler's Idea of Subtractions .....	56
2.1.4 The Square of the Dirac Delta Function .....	58
2.2 Regularization of Divergent Integrals in Baby Renormalization Theory .....	60
2.2.1 Momentum Cut-off and the Method of Power-Counting .....	60
2.2.2 The Choice of the Normalization Momentum .....	63
2.2.3 The Method of Differentiating Parameter Integrals .	63
2.2.4 The Method of Taylor Subtraction .....	64

2.2.5	Overlapping Divergences . . . . .	65	3.4.8	Random Variables, Moments, and Cumulants . . . . .	143
2.2.6	The Role of Counterterms . . . . .	67	3.5	Symmetry and Hopf Algebras . . . . .	146
2.2.7	Euler's Gamma Function . . . . .	67	3.5.1	The Strategy of Coordinatization in Mathematics and Physics . . . . .	146
2.2.8	Integration Tricks . . . . .	69	3.5.2	The Coordinate Hopf Algebra of a Finite Group . . .	148
2.2.9	Dimensional Regularization via Analytic Continua- tion . . . . .	73	3.5.3	The Coordinate Hopf Algebra of an Operator Group	150
2.2.10	Pauli–Villars Regularization . . . . .	76	3.5.4	The Tannaka–Krein Duality for Compact Lie Groups	152
2.2.11	Analytic Regularization . . . . .	77	3.6	Regularization and Rota–Baxter Algebras . . . . .	154
2.2.12	Application to Algebraic Feynman Integrals in Minkowski Space . . . . .	80	3.6.1	Regularization of the Laurent Series . . . . .	157
2.2.13	Distribution-Valued Meromorphic Functions . . . . .	81	3.6.2	Projection Operators . . . . .	158
2.2.14	Application to Newton's Equation of Motion . . . . .	87	3.6.3	The $q$ -Integral . . . . .	158
2.2.15	Hints for Further Reading. . . . .	92	3.6.4	The Volterra–Spitzer Exponential Formula . . . . .	160
2.3	Further Regularization Methods in Mathematics . . . . .	93	3.6.5	The Importance of the Exponential Function in Mathematics and Physics . . . . .	161
2.3.1	Euler's Philosophy . . . . .	93	3.7	Partially Ordered Sets and Combinatorics . . . . .	162
2.3.2	Adiabatic Regularization of Divergent Series . . . . .	94	3.7.1	Incidence Algebras and the Zeta Function . . . . .	162
2.3.3	Adiabatic Regularization of Oscillating Integrals . . .	95	3.7.2	The Möbius Function as an Inverse Function . . . . .	163
2.3.4	Regularization by Averaging . . . . .	96	3.7.3	The Inclusion–Exclusion Principle in Combinatorics	164
2.3.5	Borel Regularization . . . . .	98	3.7.4	Applications to Number Theory . . . . .	166
2.3.6	Hadamard's Finite Part of Divergent Integrals . . . . .	100	3.8	Hints for Further Reading . . . . .	167
2.3.7	Infinite-Dimensional Gaussian Integrals and the Zeta Function Regularization . . . . .	101	4.	<b>The Strategy of Equivalence Classes in Mathematics . . . . .</b>	175
2.4	Trouble in Mathematics . . . . .	102	4.1	Equivalence Classes in Algebra . . . . .	178
2.4.1	Interchanging Limits . . . . .	102	4.1.1	The Gaussian Quotient Ring and the Quadratic Reciprocity Law in Number Theory . . . . .	178
2.4.2	The Ambiguity of Regularization Methods . . . . .	104	4.1.2	Application of the Fermat–Euler Theorem in Coding Theory . . . . .	182
2.4.3	Pseudo-Convergence . . . . .	104	4.1.3	Quotient Rings, Quotient Groups, and Quotient Fields	184
2.4.4	Ill-Posed Problems . . . . .	105	4.1.4	Linear Quotient Spaces . . . . .	188
2.5	Mathemagics . . . . .	109	4.1.5	Ideals and Quotient Algebras . . . . .	190
3.	<b>The Power of Combinatorics . . . . .</b>	115	4.2	Superfunctions and the Heaviside Calculus in Electrical Engineering . . . . .	191
3.1	Algebras . . . . .	115	4.3	Equivalence Classes in Geometry . . . . .	194
3.2	The Algebra of Multilinear Functionals . . . . .	117	4.3.1	The Basic Idea of Geometry Epitomized by Klein's Erlangen Program . . . . .	194
3.3	Fusion, Splitting, and Hopf Algebras . . . . .	122	4.3.2	Symmetry Spaces, Orbit Spaces, and Homogeneous Spaces . . . . .	194
3.3.1	The Bialgebra of Linear Differential Operators . . . . .	123	4.3.3	The Space of Quantum States . . . . .	199
3.3.2	The Definition of Hopf Algebras . . . . .	128	4.3.4	Real Projective Spaces . . . . .	200
3.4	Power Series Expansion and Hopf Algebras . . . . .	131	4.3.5	Complex Projective Spaces . . . . .	203
3.4.1	The Importance of Cancellations . . . . .	131	4.3.6	The Shape of the Universe . . . . .	204
3.4.2	The Kepler Equation and the Lagrange Inversion Formula . . . . .	132	4.4	Equivalence Classes in Topology . . . . .	205
3.4.3	The Composition Formula for Power Series . . . . .	134	4.4.1	Topological Quotient Spaces . . . . .	205
3.4.4	The Faà di Bruno Hopf Algebra for the Formal Diffeomorphism Group of the Complex Plane . . . . .	136	4.4.2	Physical Fields, Observers, Bundles, and Cocycles . .	208
3.4.5	The Generalized Zimmermann Forest Formula . . . . .	138	4.4.3	Generalized Physical Fields and Sheaves . . . . .	216
3.4.6	The Logarithmic Function and Schur Polynomials . .	140			
3.4.7	Correlation Functions in Quantum Field Theory . . .	141			

4.4.4	Deformations, Mapping Classes, and Topological Charges . . . . .	219
4.4.5	Poincaré's Fundamental Group . . . . .	223
4.4.6	Loop Spaces and Higher Homotopy Groups . . . . .	225
4.4.7	Homology, Cohomology, and Electrodynamics . . . . .	227
4.4.8	Bott's Periodicity Theorem . . . . .	227
4.4.9	$K$ -Theory . . . . .	228
4.4.10	Application to Fredholm Operators . . . . .	233
4.4.11	Hints for Further Reading . . . . .	235
4.5	The Strategy of Partial Ordering . . . . .	237
4.5.1	Feynman Diagrams . . . . .	238
4.5.2	The Abstract Entropy Principle in Thermodynamics . . . . .	239
4.5.3	Convergence of Generalized Sequences . . . . .	240
4.5.4	Inductive and Projective Topologies . . . . .	241
4.5.5	Inductive and Projective Limits . . . . .	243
4.5.6	Classes, Sets, and Non-Sets . . . . .	245
4.5.7	The Fixed-Point Theorem of Brouwer–Kneser . . . . .	247
4.5.8	Zorn's Lemma . . . . .	248
4.6	Leibniz's Infinitesimals and Non-Standard Analysis . . . . .	248
4.6.1	Filters and Ultrafilters . . . . .	250
4.6.2	The Full-Rigged Real Line . . . . .	251

---

## Part II. Basic Ideas in Classical Mechanics

---

5.	<b>Geometrical Optics</b> . . . . .	263
5.1	Ariadne's Thread in Geometrical Optics . . . . .	264
5.2	Fermat's Principle of Least Time . . . . .	268
5.3	Huygens' Principle on Wave Fronts . . . . .	270
5.4	Carathéodory's Royal Road to Geometrical Optics . . . . .	271
5.5	The Duality between Light Rays and Wave Fronts . . . . .	274
5.5.1	From Wave Fronts to Light Rays . . . . .	275
5.5.2	From Light Rays to Wave Fronts . . . . .	276
5.6	The Jacobi Approach to Focal Points . . . . .	276
5.7	Lie's Contact Geometry . . . . .	279
5.7.1	Basic Ideas . . . . .	279
5.7.2	Contact Manifolds and Contact Transformations . . . . .	283
5.7.3	Applications to Geometrical Optics . . . . .	284
5.7.4	Equilibrium Thermodynamics and Legendre Submanifolds . . . . .	285
5.8	Light Rays and Non-Euclidean Geometry . . . . .	289
5.8.1	Linear Symplectic Spaces . . . . .	291
5.8.2	The Kähler Form of a Complex Hilbert Space . . . . .	295
5.8.3	The Refraction Index and Geodesics . . . . .	297
5.8.4	The Trick of Gauge Fixing . . . . .	299

5.8.5	Geodesic Flow . . . . .	299
5.8.6	Hamilton's Duality Trick and Cogeodesic Flow . . . . .	300
5.8.7	The Principle of Minimal Geodesic Energy . . . . .	301
5.9	Spherical Geometry . . . . .	302
5.9.1	The Global Gauss–Bonnet Theorem . . . . .	303
5.9.2	De Rham Cohomology and the Chern Class of the Sphere . . . . .	305
5.9.3	The Beltrami Model . . . . .	308
5.10	The Poincaré Model of Hyperbolic Geometry . . . . .	314
5.10.1	Kähler Geometry and the Gaussian Curvature . . . . .	318
5.10.2	Kähler–Einstein Geometry . . . . .	323
5.10.3	Symplectic Geometry . . . . .	323
5.10.4	Riemannian Geometry . . . . .	324
5.11	Ariadne's Thread in Gauge Theory . . . . .	333
5.11.1	Parallel Transport of Physical Information – the Key to Modern Physics . . . . .	334
5.11.2	The Phase Equation and Fiber Bundles . . . . .	337
5.11.3	Gauge Transformations and Gauge-Invariant Differential Forms . . . . .	338
5.11.4	Perspectives . . . . .	341
5.12	Classification of Two-Dimensional Compact Manifolds . . . . .	343
5.13	The Poincaré Conjecture and the Ricci Flow . . . . .	346
5.14	A Glance at Modern Optimization Theory . . . . .	348
5.15	Hints for Further Reading . . . . .	348

6.	<b>The Principle of Critical Action and the Harmonic Oscillator – Ariadne's Thread in Classical Mechanics</b> . . . . .	359
6.1	Prototypes of Extremal Problems . . . . .	360
6.2	The Motion of a Particle . . . . .	364
6.3	Newtonian Mechanics . . . . .	366
6.4	A Glance at the History of the Calculus of Variations . . . . .	370
6.5	Lagrangian Mechanics . . . . .	372
6.5.1	The Harmonic Oscillator . . . . .	373
6.5.2	The Euler–Lagrange Equation . . . . .	375
6.5.3	Jacobi's Accessory Eigenvalue Problem . . . . .	376
6.5.4	The Morse Index . . . . .	377
6.5.5	The Anharmonic Oscillator . . . . .	378
6.5.6	The Ginzburg–Landau Potential and the Higgs Potential . . . . .	380
6.5.7	Damped Oscillations, Stability, and Energy Dissipation . . . . .	382
6.5.8	Resonance and Small Divisors . . . . .	382
6.6	Symmetry and Conservation Laws . . . . .	383
6.6.1	The Symmetries of the Harmonic Oscillator . . . . .	384
6.6.2	The Noether Theorem . . . . .	384

6.7	The Pendulum and Dynamical Systems . . . . .	390	7.4	Schrödinger's Quantum Mechanics . . . . .	459
6.7.1	The Equation of Motion . . . . .	390	7.4.1	The Schrödinger Equation . . . . .	459
6.7.2	Elliptic Integrals and Elliptic Functions . . . . .	391	7.4.2	States, Observables, and Measurements . . . . .	462
6.7.3	The Phase Space of the Pendulum and Bundles . . . . .	396	7.4.3	The Free Motion of a Quantum Particle . . . . .	464
6.8	Hamiltonian Mechanics . . . . .	402	7.4.4	The Harmonic Oscillator . . . . .	467
6.8.1	The Canonical Equation . . . . .	404	7.4.5	The Passage to the Heisenberg Picture . . . . .	473
6.8.2	The Hamiltonian Flow . . . . .	404	7.4.6	Heisenberg's Uncertainty Principle . . . . .	475
6.8.3	The Hamilton–Jacobi Partial Differential Equation . . . . .	405	7.4.7	Unstable Quantum States and the Energy-Time Uncertainty Relation . . . . .	476
6.9	Poissonian Mechanics . . . . .	406	7.4.8	Schrödinger's Coherent States . . . . .	478
6.9.1	Poisson Brackets and the Equation of Motion . . . . .	407	7.5	Feynman's Quantum Mechanics . . . . .	479
6.9.2	Conservation Laws . . . . .	407	7.5.1	Main Ideas . . . . .	480
6.10	Symplectic Geometry . . . . .	407	7.5.2	The Diffusion Kernel and the Euclidean Strategy in Quantum Physics . . . . .	487
6.10.1	The Canonical Equations . . . . .	408	7.5.3	Probability Amplitudes and the Formal Propagator Theory . . . . .	488
6.10.2	Symplectic Transformations . . . . .	409	7.6	Von Neumann's Rigorous Approach . . . . .	495
6.11	The Spherical Pendulum . . . . .	411	7.6.1	The Prototype of the Operator Calculus . . . . .	496
6.11.1	The Gaussian Principle of Critical Constraint . . . . .	411	7.6.2	The General Operator Calculus . . . . .	499
6.11.2	The Lagrangian Approach . . . . .	412	7.6.3	Rigorous Propagator Theory . . . . .	505
6.11.3	The Hamiltonian Approach . . . . .	414	7.6.4	The Free Quantum Particle as a Paradigm of Functional Analysis . . . . .	509
6.11.4	Geodesics of Shortest Length . . . . .	415	7.6.5	The Free Hamiltonian . . . . .	524
6.12	The Lie Group $SU(E^3)$ of Rotations . . . . .	416	7.6.6	The Rescaled Fourier Transform . . . . .	532
6.12.1	Conservation of Angular Momentum . . . . .	416	7.6.7	The Quantized Harmonic Oscillator and the Maslov Index . . . . .	534
6.12.2	Lie's Momentum Map . . . . .	419	7.6.8	Ideal Gases and von Neumann's Density Operator . . . . .	540
6.13	Carathéodory's Royal Road to the Calculus of Variations . . . . .	419	7.7	The Feynman Path Integral . . . . .	547
6.13.1	The Fundamental Equation . . . . .	419	7.7.1	The Basic Strategy . . . . .	547
6.13.2	Lagrangian Submanifolds in Symplectic Geometry . . . . .	421	7.7.2	The Basic Definition . . . . .	549
6.13.3	The Initial-Value Problem for the Hamilton–Jacobi Equation . . . . .	423	7.7.3	Application to the Free Quantum Particle . . . . .	550
6.13.4	Solution of Carathéodory's Fundamental Equation . . . . .	423	7.7.4	Application to the Harmonic Oscillator . . . . .	552
6.14	Hints for Further Reading . . . . .	424	7.7.5	The Propagator Hypothesis . . . . .	555
			7.7.6	Motivation of Feynman's Path Integral . . . . .	555
			7.8	Finite-Dimensional Gaussian Integrals . . . . .	559
			7.8.1	Basic Formulas . . . . .	560
			7.8.2	Free Moments, the Wick Theorem, and Feynman Diagrams . . . . .	564
			7.8.3	Full Moments and Perturbation Theory . . . . .	567
			7.9	Rigorous Infinite-Dimensional Gaussian Integrals . . . . .	570
			7.9.1	The Infinite-Dimensional Dispersion Operator . . . . .	571
			7.9.2	Zeta Function Regularization and Infinite-Dimensional Determinants . . . . .	572
			7.9.3	Application to the Free Quantum Particle . . . . .	574
			7.9.4	Application to the Quantized Harmonic Oscillator . . . . .	576

---

### Part III. Basic Ideas in Quantum Mechanics

---

<b>7.</b>	<b>Quantization of the Harmonic Oscillator – Ariadne's Thread in Quantization . . . . .</b>	<b>427</b>
7.1	Complete Orthonormal Systems . . . . .	430
7.2	Bosonic Creation and Annihilation Operators . . . . .	432
7.3	Heisenberg's Quantum Mechanics . . . . .	440
7.3.1	Heisenberg's Equation of Motion . . . . .	443
7.3.2	Heisenberg's Uncertainty Inequality for the Harmonic Oscillator . . . . .	446
7.3.3	Quantization of Energy . . . . .	447
7.3.4	The Transition Probabilities . . . . .	449
7.3.5	The Wightman Functions . . . . .	451
7.3.6	The Correlation Functions . . . . .	456

7.9.5	The Spectral Hypothesis . . . . .	579	7.18.1	Von Neumann's Bicommutant Theorem . . . . .	655
7.10	The Semi-Classical WKB Method . . . . .	580	7.18.2	The Murray–von Neumann Classification of Factors . . . . .	658
7.11	Brownian Motion . . . . .	584	7.18.3	The Tomita–Takesaki Theory and KMS-States . . . . .	659
7.11.1	The Macroscopic Diffusion Law . . . . .	584	7.19	Connes' Noncommutative Geometry . . . . .	660
7.11.2	Einstein's Key Formulas for the Brownian Motion . . . . .	585	7.20	Jordan Algebras . . . . .	662
7.11.3	The Random Walk of Particles . . . . .	585	7.21	The Supersymmetric Harmonic Oscillator . . . . .	663
7.11.4	The Rigorous Wiener Path Integral . . . . .	586	7.22	Hints for Further Reading . . . . .	667
7.11.5	The Feynman–Kac Formula . . . . .	588	<b>8. Quantum Particles on the Real Line – Ariadne's Thread in Scattering Theory . . . . .</b>	<b>699</b>	
7.12	Weyl Quantization . . . . .	590	8.1	Classical Dynamics Versus Quantum Dynamics . . . . .	699
7.12.1	The Formal Moyal Star Product . . . . .	591	8.2	The Stationary Schrödinger Equation . . . . .	703
7.12.2	Deformation Quantization of the Harmonic Oscillator . . . . .	592	8.3	One-Dimensional Quantum Motion in a Square-Well Potential . . . . .	704
7.12.3	Weyl Ordering . . . . .	596	8.3.1	Free Motion . . . . .	704
7.12.4	Operator Kernels . . . . .	599	8.3.2	Scattering States and the $S$ -Matrix . . . . .	705
7.12.5	The Formal Weyl Calculus . . . . .	602	8.3.3	Bound States . . . . .	710
7.12.6	The Rigorous Weyl Calculus . . . . .	606	8.3.4	Bound-State Energies and the Singularities of the $S$ -Matrix . . . . .	712
7.13	Two Magic Formulas . . . . .	608	8.3.5	The Energetic Riemann Surface, Resonances, and the Breit–Wigner Formula . . . . .	713
7.13.1	The Formal Feynman Path Integral for the Propagator Kernel . . . . .	611	8.3.6	The Jost Functions . . . . .	718
7.13.2	The Relation between the Scattering Kernel and the Propagator Kernel . . . . .	614	8.3.7	The Fourier–Stieltjes Transformation . . . . .	719
7.14	The Poincaré–Wirtinger Calculus . . . . .	616	8.3.8	Generalized Eigenfunctions of the Hamiltonian . . . . .	720
7.15	Bargmann's Holomorphic Quantization . . . . .	617	8.3.9	Quantum Dynamics and the Scattering Operator . . . . .	722
7.16	The Stone–Von Neumann Uniqueness Theorem . . . . .	621	8.3.10	The Feynman Propagator . . . . .	726
7.16.1	The Prototype of the Weyl Relation . . . . .	621	8.4	Tunnelling of Quantum Particles and Radioactive Decay . . . . .	727
7.16.2	The Main Theorem . . . . .	626	8.5	The Method of the Green's Function in a Nutshell . . . . .	729
7.16.3	$C^*$ -Algebras . . . . .	627	8.5.1	The Inhomogeneous Helmholtz Equation . . . . .	730
7.16.4	Operator Ideals . . . . .	629	8.5.2	The Retarded Green's Function, and the Existence and Uniqueness Theorem . . . . .	731
7.16.5	Symplectic Geometry and the Weyl Quantization Functor . . . . .	630	8.5.3	The Advanced Green's Function . . . . .	736
7.17	A Glance at the Algebraic Approach to Quantum Physics . . . . .	633	8.5.4	Perturbation of the Retarded and Advanced Green's Function . . . . .	737
7.17.1	States and Observables . . . . .	633	8.5.5	Feynman's Regularized Fourier Method . . . . .	739
7.17.2	Gleason's Extension Theorem – the Main Theorem of Quantum Logic . . . . .	637	8.6	The Lippmann–Schwinger Integral Equation . . . . .	743
7.17.3	The Finite Standard Model in Statistical Physics as a Paradigm . . . . .	638	8.6.1	The Born Approximation . . . . .	743
7.17.4	Information, Entropy, and the Measure of Disorder . . . . .	640	8.6.2	The Existence and Uniqueness Theorem via Banach's Fixed Point Theorem . . . . .	744
7.17.5	Semiclassical Statistical Physics . . . . .	645	8.6.3	Hypoellipticity . . . . .	745
7.17.6	The Classical Ideal Gas . . . . .	648	<b>9. A Glance at General Scattering Theory . . . . .</b>	<b>747</b>	
7.17.7	Bose–Einstein Statistics . . . . .	649	9.1	The Formal Basic Idea . . . . .	749
7.17.8	Fermi–Dirac Statistics . . . . .	650	9.2	The Rigorous Time-Dependent Approach . . . . .	751
7.17.9	Thermodynamic Equilibrium and KMS-States . . . . .	651	9.3	The Rigorous Time-Independent Approach . . . . .	753
7.17.10	Quasi-Stationary Thermodynamic Processes and Irreversibility . . . . .	652			
7.17.11	The Photon Mill on Earth . . . . .	654			
7.18	Von Neumann Algebras . . . . .	654			

9.4	Applications to Quantum Mechanics	754
9.5	A Glance at Quantum Field Theory	757
9.6	Hints for Further Reading	758

## Part IV. Quantum Electrodynamics (QED)

---

<b>10.</b>	<b>Creation and Annihilation Operators</b>	771
10.1	The Bosonic Fock Space	771
10.1.1	The Particle Number Operator	774
10.1.2	The Ground State	774
10.2	The Fermionic Fock Space and the Pauli Principle	779
10.3	General Construction	784
10.4	The Main Strategy of Quantum Electrodynamics	788
<b>11.</b>	<b>The Basic Equations in Quantum Electrodynamics</b>	793
11.1	The Classical Lagrangian	793
11.2	The Gauge Condition	796
<b>12.</b>	<b>The Free Quantum Fields of Electrons, Positrons, and Photons</b>	799
12.1	Classical Free Fields	799
12.1.1	The Lattice Strategy in Quantum Electrodynamics	799
12.1.2	The High-Energy Limit and the Low-Energy Limit	802
12.1.3	The Free Electromagnetic Field	803
12.1.4	The Free Electron Field	806
12.2	Quantization	811
12.2.1	The Free Photon Quantum Field	812
12.2.2	The Free Electron Quantum Field and Antiparticles	814
12.2.3	The Spin of Photons	819
12.3	The Ground State Energy and the Normal Product	822
