16	Free-Electron Model of Metals	1
16.1	Classical Drude Model	2
16.1.1	Basic Assumptions of the Model	2
16.1.2	Electrical Conductivity	5
16.1.3	Heat Conduction	9
16.1.4	Hall Resistance	11
16.1.5	AC Conductivity	14
16.1.6	High-Frequency Behavior of a Classical Electron Gas ..	16
16.1.7	Magnetic Properties	20
16.1.8	Failures of the Drude Model	22
16.2	Quantum Mechanical Sommerfeld Model	24
16.2.1	Quantum Mechanical States of Free Electrons	24
16.2.2	Ground State of the Electron Gas	28
16.2.3	Excited Electron and Hole States	31
16.2.4	Density of States of the Electron Gas	32
16.2.5	Ideal Electron Gas at Finite Temperatures	34
16.2.6	Sommerfeld Expansion	37
16.2.7	Specific Heat of the Electron Gas	40
16.2.8	Equation of State for the Ideal Electron Gas	42
16.2.9	Susceptibility of the Electron Gas	44
16.3	Electric and Heat Currents in an Electron Gas	47
16.3.1	Noninteracting Electrons in a Uniform Electric Field ...	47
16.3.2	Stationary Distribution Function	49
16.3.3	Electric and Heat Currents	53
16.3.4	Thermoelectric Phenomena	56
16.3.5	Galvanomagnetic and Thermomagnetic Phenomena	61
16.4	Scattering of Free Electrons by Impurities	64
16.4.1	Formal Solution of the Schrödinger Equation	64
16.4.2	Approach Based on Scattering Theory	65
16.4.3	Friedel Oscillations Around Impurities	69
16.4.4	Bound States Around Impurities	73
16.5	Inadequacies of the Free-Electron Model	74

17 Electrons in the Periodic Potential of a Crystal	77	19.2.4 LMTO Method	175
17.1 Band Structure of Electronic States	78	19.3 Band Structure and Fermi Surface of Simple Metals	178
17.1.1 Bloch States	78	19.3.1 Monovalent Metals	178
17.1.2 Energy Levels of Bloch States	80	19.3.2 Divalent Metals	182
17.1.3 Eigenvalue Problem for Equivalent \mathbf{k} Vectors	82	19.3.3 Trivalent Metals	183
17.1.4 Role of the Spin–Orbit Interaction	83	19.3.4 Tetravalent Elements	185
17.2 Representation of the Band Structure	84	19.3.5 Band Structure of Transition Metals and Rare-Earth Metals	185
17.2.1 Reduced-, Repeated-, and Extended-Zone Schemes	85	19.4 Experimental Study of the Band Structure	187
17.2.2 Constant-Energy Surfaces and the Fermi Surface	88	19.4.1 Positron Annihilation and Compton Scattering	187
17.3 Metals, Insulators, Semiconductors	89	19.4.2 Photoelectron Spectroscopy	190
17.4 Bloch Electrons as Quasiparticles	92	20 Electronic Structure of Semiconductors	195
17.4.1 Creation and Annihilation Operators of Bloch States	92	20.1 Semiconductor Materials	196
17.4.2 Effective Mass of Bloch Electrons	93	20.1.1 Elemental Semiconductors	196
17.4.3 Bloch Electrons and Holes	95	20.1.2 Compound Semiconductors	198
17.4.4 Density of States for Bloch Electrons	96	20.2 Band Structure of Pure Semiconductors	201
17.4.5 Specific Heat and Susceptibility of Bloch Electrons	98	20.2.1 Electronic Structure in the Diamond Lattice	201
17.5 Wannier States	100	20.2.2 Band Structure of Silicon	204
17.5.1 Wannier Functions	100	20.2.3 Band Structure of Germanium	206
17.5.2 Creation and Annihilation Operators of Wannier States	103	20.2.4 Band Structure of Compound Semiconductors	208
17.6 Electron States Around Impurities	104	20.2.5 Indirect- and Direct-Gap Semiconductors	211
18 Simple Models of the Band Structure	109	20.3 Electrons and Holes in Intrinsic Semiconductors	212
18.1 Nearly-Free-Electron Approximation	109	20.3.1 Number of Thermally Excited Charge Carriers	212
18.1.1 Band Structure in the Empty Lattice	110	20.3.2 Temperature Dependence of the Chemical Potential	218
18.1.2 Fermi Surface in the Empty Lattice	115	20.4 Electronic Structure of Doped Semiconductors	219
18.1.3 Effects of a Weak Periodic Potential	120	20.4.1 Energy of Donor and Acceptor Levels	220
18.1.4 Lifting of Accidental Degeneracies	126	20.5 Doped Semiconductors at Finite Temperatures	224
18.1.5 Fermi Surface for Nearly Free Electrons	136	20.5.1 Condition of Charge Neutrality	225
18.2 Tight-Binding Approximation	139	20.5.2 Thermal Population of Donor and Acceptor Levels	227
18.2.1 Broadening of Atomic Levels into Bands	140	20.5.3 Number of Carriers in Doped Semiconductors	228
18.2.2 Band of s -Electrons	143	21 Semiclassical Dynamics of Electrons	239
18.2.3 Band of p -Electrons	145	21.1 Basics of Semiclassical Dynamics	239
19 Methods for Calculating and Measuring the Band Structure	151	21.1.1 Velocity of Bloch Electrons	240
19.1 Matrix Methods	152	21.1.2 Semiclassical Equation of Motion	243
19.1.1 General Formulation of the Problem	152	21.1.3 Effective-Mass Tensor	246
19.1.2 LCAO Method	154	21.1.4 Motion of Electrons and Holes	247
19.1.3 Plane-Wave Method	156	21.2 Bloch Electrons in Uniform Magnetic Fields	248
19.1.4 Orthogonalized-Plane-Wave Method	157	21.2.1 Motion in Reciprocal and Real Spaces	249
19.1.5 Pseudopotential Method	160	21.2.2 Open and Closed Orbits in Magnetic Fields	251
19.2 Variational Methods and Methods Based on Scattering Theory	164	21.2.3 Cyclotron Frequency in a Closed Orbit	253
19.2.1 Augmented-Plane-Wave Method	164	21.2.4 Cyclotron Mass	255
19.2.2 Green Function or KKR Method	168	21.2.5 Cyclotron Resonance	259
19.2.3 Physical Interpretation of the KKR Method	173	21.2.6 Azbel–Kaner Resonance	262

21.2.7 Magnetoacoustic Geometric Oscillations	265	23.3.2 Polarons	346
21.3 Size Effects	268	23.3.3 Kohn Anomaly and Peierls Instability	350
21.3.1 Extinction of the Resonance in Thin Samples	268	23.3.4 Jahn–Teller Distortion	353
21.3.2 Radiofrequency Size Effect	270	23.3.5 Effective Electron–Electron Interaction	355
21.4 Limitations of the Semiclassical Description	271	24 Transport Phenomena	357
21.4.1 Conditions of the Applicability of Semiclassical Dynamics	272	24.1 General Formulation of Transport Phenomena	358
21.4.2 Electric and Magnetic Breakdown	274	24.1.1 Currents and Driving Forces	359
22 Electrons in Strong Magnetic Fields	277	24.1.2 Onsager Relations	360
22.1 Free Electrons in a Magnetic Field	277	24.2 Boltzmann Equation	361
22.1.1 One-Particle Energy Spectrum	277	24.2.1 Nonequilibrium Distribution Function	362
22.1.2 Degree of Degeneracy of Landau Levels	281	24.2.2 Boltzmann Equation for Electrons	363
22.1.3 Density of States	283	24.2.3 Collision Term for Scattering by Lattice Defects	365
22.1.4 Visualization of the Landau States	288	24.2.4 Boltzmann Equation for Phonons	366
22.1.5 Landau States in the Symmetric Gauge	290	24.2.5 Coupled Electron–Phonon Systems	368
22.1.6 Edge States	294	24.3 Relaxation-Time Approximation	370
22.2 Landau Diamagnetism	295	24.3.1 Relaxation Time	370
22.3 Bloch Electrons in Strong Magnetic Fields	297	24.3.2 Distribution Function in the Relaxation-Time Approximation	373
22.3.1 Electrons Characterized by an Effective-Mass Tensor	297	24.3.3 DC Conductivity	376
22.3.2 Semiclassical Quantization	300	24.3.4 AC and Optical Conductivity	378
22.3.3 Quantization of the Orbit in Real Space	301	24.3.5 General Form of Transport Coefficients	379
22.3.4 Energy Spectrum in the Tight-Binding Approximation	302	24.3.6 Hall Effect	381
22.3.5 Diamagnetic Susceptibility of Bloch Electrons	305	24.3.7 Alternative Treatment of Transport in Magnetic Fields	383
22.4 Quantum Oscillations in Magnetic Fields	306	24.3.8 Magnetoresistance	384
22.4.1 Oscillations in a Two-Dimensional Electron Gas	307	24.4 Transport Coefficients in Metals and Semiconductors	387
22.4.2 Energy of a Three-Dimensional Electron Gas in a Magnetic Field	310	24.4.1 Scattering of Electrons by Impurities	387
22.4.3 De Haas–van Alphen Effect	314	24.4.2 Contribution of Electron–Phonon Scattering to the Resistivity	389
22.4.4 Role of Spin in Oscillatory Phenomena	317	24.4.3 Scattering by Magnetic Impurities and the Kondo Effect	394
22.4.5 Oscillations in the Magnetization at Finite Temperatures	318	24.4.4 Electronic Contribution to Thermal Conductivity	399
22.4.6 Oscillations for General Fermi Surfaces	324	24.4.5 Phonon Contribution to Thermal Conductivity	400
22.4.7 Experimental Results	325	24.4.6 Transport Coefficients in Semiconductors	402
22.4.8 Further Oscillation Phenomena	327	24.5 Quantum Hall Effect	405
23 Electrons in Thermally Vibrating Lattices	329	25 Optical Properties of Solids	411
23.1 Adiabatic Decoupling	330	25.1 Interaction of Solids with the Classical Radiation Field	412
23.2 Hamiltonian of the Electron–Phonon Interaction	333	25.1.1 Propagation and Absorption of Light in a Dielectric	413
23.2.1 Second-Quantized Form of the Hamiltonian	334	25.1.2 Reflection and Refraction at an Interface	417
23.2.2 Electron–Phonon Matrix Element	337	25.1.3 Role of Free and Bound Electrons	420
23.2.3 Deformation Potential	339	25.1.4 Scattering of Light by Free Electrons	421
23.2.4 Interaction of Electrons with Optical Phonons	341	25.1.5 Reflectivity of Semiconductors	426
23.3 Consequences of the Electron–Phonon Interaction	343	25.1.6 Interaction of Light with Bound Electrons	427
23.3.1 Finite Lifetime of Electron States	344	25.1.7 Absorption and Dispersion in Ionic Crystals	430

25.2 Quantum Mechanical Treatment	435	27.2 Generation, Motion, and Recombination of Carriers	533
25.2.1 Dielectric Constant of the System of Electrons	435	27.2.1 Generation and Recombination of Carriers	534
25.2.2 Electron–Photon Interaction	440	27.2.2 Diffusion and Drift of Carriers	537
25.2.3 Phonon–Photon Interaction	443	27.2.3 Fundamental Equations of the Physics of Semiconductor Devices	540
26 Superconductivity	449	27.3 Biased Semiconductor Junctions	541
26.1 Superconductivity: The Phenomenon	451	27.3.1 Biased Schottky Diodes	541
26.1.1 Vanishing Resistance, Persistent Current	451	27.3.2 Biased MOS Structures	545
26.1.2 Isotope Effect	452	27.3.3 Current–Voltage Characteristics of p – n Junctions	545
26.1.3 Meissner–Ochsenfeld Effect	452	27.3.4 Zener and Avalanche Breakdown in p – n Junctions	554
26.1.4 Critical Field	455	27.3.5 Tunnel Diodes	556
26.1.5 Thermoelectric Properties	457	27.4 Simple Semiconductor Devices	558
26.1.6 Specific Heat	458	27.4.1 Bipolar Transistors	558
26.1.7 Tunneling in SIS and SIN Junctions	460	27.4.2 Field-Effect Transistors	560
26.2 Superconducting Materials	461	27.4.3 Semiconductor Lasers and Solar Cells	562
26.2.1 Superconducting Elements	461	27.5 Semiconductor Quantum Devices	564
26.2.2 Superconducting Compounds	464	27.5.1 Electron Spectrum of Quantum Wells	565
26.2.3 High-Temperature Superconductors	466	27.5.2 Quantum Wires and Quantum Dots	567
26.3 Phenomenological Description of Superconductivity	469	27.6 Basics of Spintronics	573
26.3.1 Thermodynamics of Superconductors	470	G Quantum Mechanical Perturbation Theory	579
26.3.2 Electrodynamics of Superconductors	474	G.1 Time-Independent Perturbation Theory	579
26.3.3 Pippard Coherence Length	479	G.1.1 Nondegenerate Perturbation Theory	579
26.3.4 Flux Quantization	481	G.1.2 Degenerate Perturbation Theory	583
26.4 Ginzburg–Landau Theory	482	G.2 Time-Dependent Perturbation Theory	584
26.4.1 Ginzburg–Landau Equations	483	H Second Quantization	589
26.4.2 Gauge Symmetry Breaking	485	H.1 Occupation-Number Representation	589
26.4.3 Coherence Length and Penetration Depth	486	H.2 Second-Quantized Form of Operators	593
26.4.4 Flux Quantization	489	H.2.1 Second-Quantized Form of One-Particle Operators	593
26.4.5 Energy of the Normal Metal–Superconductor Interface	491	H.2.2 Second-Quantized Form of Two-Particle Operators	595
26.4.6 Vortices	493	H.2.3 Field Operators	596
26.4.7 Upper and Lower Critical Fields	497	H.2.4 Second-Quantized Form of the Electronic Hamiltonian	597
26.5 Josephson Effect	501	H.2.5 Number-Density and Spin-Density Operators	600
26.5.1 Relation Between the Josephson Current and the Phase of the Superconductor	501	I Canonical Transformation	603
26.5.2 DC Josephson Effect	504	I.1 Derivation of an Effective Hamiltonian	603
26.5.3 AC Josephson Effect	506	I.1.1 General Formulation of the Problem	603
26.5.4 Josephson Junctions in a Magnetic Field	509	I.1.2 RKKY Interaction	605
27 Transport of Carriers in Semiconductor Devices	517	I.1.3 Derivation of the s – d Interaction	611
27.1 Interfaces and Junctions	518	I.2 Diagonalization of the Hamiltonian	612
27.1.1 Metal–Semiconductor Interface	518	I.2.1 Bosonic Systems	613
27.1.2 MOS Structures	525	I.2.2 Fermionic Systems	615
27.1.3 p – n Junctions	526		
27.1.4 Heterojunctions	532
