Preface	v
1 Introduction	1
1.1 Motivation	1
1.2 Mathematical Preliminaries and Notation	3
1.2.1 Function spaces and norms	3
1.2.2 Stability in the infinite-dimensional setting	8
1.2.3 Spatial invariance, Fourier transforms, and Fourier series .	11
1.2.4 Singular perturbation theory	20
1.2.5 The backstepping method for parabolic PDEs	23
1.3 Overview of the Monograph	34
1.4 Notes and References	36
2 Thermal-Fluid Convection Loop: Boundary Stabilization	39
2.1 Thermal Convection Loop Model	39
2.2 Reduced Model and Velocity Controller for Large Prandtl Numbers	41
2.3 Backstepping Controller for Temperature	42
2.3.1 Temperature target system	42
2.3.2 Backstepping temperature transformation	43
2.3.3 Temperature control law	45
2.3.4 Inverse transformation for temperature	46
2.4 Singular Perturbation Stability Analysis for the System	46
2.5 Simulation Study	51

2.6	Notes and References	54
3	Thermal-Fluid Convection Loop: Boundary Estimation and Output-Feedback Stabilization	55
3.1	A Decoupling Transformation for the Temperature	56
3.2	Stabilization of Uncoupled Temperature Modes	57
3.3	Stabilization of Velocity and Coupled Temperature Modes	58
3.3.1	Boundary control design using singular perturbations and backstepping	58
3.3.2	Observer design using singular perturbations and backstepping	60
3.3.3	Output-feedback controller	63
3.3.4	Singular perturbation analysis for large Prandtl numbers	63
3.4	Stability Properties of the Closed-Loop System	64
3.5	Simulation Study	65
3.6	Observer Convergence and Output-Feedback Stabilization Proofs	66
4	2D Navier–Stokes Channel Flow: Boundary Stabilization	71
4.1	2D Channel Flow Model	71
4.2	Velocity Boundary Controller	75
4.3	Closed-Loop Stability and Explicit Solutions	77
4.4	L^2 Stability for the Closed-Loop System	81
4.4.1	Controlled velocity wave numbers	82
4.4.2	Uncontrolled velocity wave number analysis	88
4.4.3	Analysis for the entire velocity wave number range	89
4.5	H^1 Stability for the Closed-Loop System	90
4.5.1	H^1 stability for controlled velocity wave numbers	90
4.5.2	H^1 stability for uncontrolled velocity wave numbers	91
4.5.3	Analysis for all velocity wave numbers	93
4.6	H^2 Stability for the Closed-Loop System	94
4.6.1	H^2 stability for controlled velocity wave numbers	94
4.6.2	H^2 stability for uncontrolled velocity wave numbers	95

4.6.3	Analysis for all velocity wave numbers	97
4.7	Proof of Well-Posedness and Explicit Solutions for the Velocity Field	97
4.8	Proof of Properties of the Velocity Boundary Controller	99
4.9	Notes and References	101
5	2D Navier–Stokes Channel Flow: Boundary Estimation	103
5.1	Observer with Boundary Sensing of Pressure and Skin Friction .	103
5.2	Observer Convergence Proof	107
5.2.1	Observed wave number analysis	108
5.2.2	Unobserved wave number analysis	111
5.2.3	Analysis for the entire observer error wave number range	111
5.3	An Output-Feedback Stabilizing Controller for 2D Channel Flow	112
5.4	Notes and References	114
6	3D Magnetohydrodynamic Channel Flow: Boundary Stabilization	115
6.1	Magnetohydrodynamic Channel Flow Model	115
6.2	Hartmann Equilibrium Profile	117
6.3	The Plant in Wave Number Space	118
6.4	Boundary Control Design	120
6.4.1	Controlled velocity wave number analysis	120
6.4.2	Uncontrolled velocity wave number analysis	127
6.4.3	Closed-loop stability properties	131
6.5	Notes and References	133
7	3D Magnetohydrodynamic Channel Flow: Boundary Estimation	135
7.1	Observer Structure	135
7.2	Observer Gain Design and Convergence Analysis	138
7.2.1	Observed wave number analysis	140
7.2.2	Unobserved wave number analysis	147
7.3	Observer Convergence Properties	148

7.4 A Nonlinear Estimator with Boundary Sensing	149
8 2D Navier–Stokes Channel Flow: Stable Flow Transfer	153
8.1 Trajectory Generation and Tracking Error Model	153
8.2 Spaces and Transformations for the Velocity Field	158
8.2.1 Periodic function spaces	158
8.2.2 Fourier series expansion in Ω_h	158
8.2.3 H^1 and H^2 functional spaces	159
8.2.4 Spaces for the velocity field	161
8.2.5 Transformations of L^2 functions	162
8.2.6 Transformations of the velocity field	164
8.3 Boundary Controller and Closed-Loop System Properties	165
8.4 Proof of Stability for the Linearized Error System	168
8.4.1 Uncontrolled velocity modes	169
8.4.2 Controlled velocity modes. Construction of boundary control laws	175
8.4.3 Stability for the whole velocity error system	178
8.4.4 Well-posedness analysis for the velocity field	179
8.5 Proof of Stability for the Nonlinear Error System	180
8.6 Proof of Well-Posedness of the Control Kernel Equation	182
8.6.1 Proof for a finite time interval	184
8.6.2 Proof for an infinite time interval	195
8.7 Notes and References	195
9 Open Problems	197
Bibliography	199
Index	209
