Contents

Dedication v

1. The Contributions of David Caughey to Computational Fluid Dynamics 1
M. M. Hafez

1.1 Introduction 1
1.2 Shock Wave Structure and Sonic Boom 2
1.3 Potential Flow Simulations 3
1.4 Solutions of Euler Equations 4
1.5 Solutions of Navier-Stokes Equations 10
1.6 Simulation of Turbulent Reactive Flows 13
1.7 Special Topics 14
1.8 Review Articles 15
1.9 Fluid Mechanics: An Interactive Text 16
1.10 Concluding Remarks 17
1-A Ph.D. Students Supervised by David A. Caughey 19
1-B Publications of David A. Caughey 21

I. Design and Optimization

2. Computational Fluid Dynamics in the Analysis and Design of Engineered Systems 37
M. Damodaran, S. Ali and S. Dayanandan

2.1 Introduction 37
2.2 Flow Modeling for Fire Control Strategies and Scenario Planning in an Underground Road Tunnel 38
2.3 Flow Modeling in a Hard Disk Drive Enclosure 43
2.4 Concluding Remarks 46
2.5 Bibliography 46

3. Advances in Aerodynamic Shape Optimization **49**
A. Jameson

3.1 Introduction . . . 49
3.2 Formulation of the Optimization Procedure . . . 52
3.2.1 Gradient Calculation . . . 52
3.3 Design using the Euler Equations . . . 55
3.4 The Reduced Gradient Formulation . . . 61
3.5 Optimization Procedure . . . 63
3.5.1 The Need for a Sobolev Inner Product in the Definition of the Gradient . . . 63
3.5.2 Sobolev Gradient for Shape Optimization . . . 65
3.5.3 Outline of the Design Procedure . . . 66
3.6 Case Studies . . . 67
3.6.1 Two-Dimensional Studies of Transonic Airfoil Design 67
3.6.2 B747 Euler Planform Result . . . 69
3.6.3 Super B747 . . . 71
3.7 Super P51 Racer . . . 71
3.7.1 Shape Optimization for a Transonic Business Jet . . . 73
3.8 Conclusion . . . 75
3.9 Acknowledgment . . . 76
3.10 Bibliography . . . 76

4. Design Optimization of Propeller Blades **81**
L. Martinelli and J.J. Dreyer

4.1 Introduction . . . 81
4.2 Formulation as a Control Problem . . . 82
4.2.1 Cost Functions for Propeller Blades . . . 83
4.2.2 Search Procedure . . . 84
4.3 Implementation . . . 86
4.4 Optimization of a Blade Section for Low Cavitation . . . 86
4.4.1 Comparisons with Water Tunnel Measurements . . . 90
4.5 Conclusions . . . 94
4.6 Bibliography . . . 95

5. Flow Boundary Conditions Modeling in 4D for Optimized, Adaptive, and Unsteady Configurations **97**
H. Sobieczky

5.1 Introduction . . . 97
5.2 Geometry Concept for 4-Dimensional Problems . . . 98
5.3 Optimization . . . 101
5.4 Adaptive Configurations . . . 101
5.5 Unsteady Boundary Conditions . . . 102
5.6 Bio-fluidmechanic Applications . . . 102
5.7 Conclusion . . . 104
5.8 Bibliography . . . 104

II. Algorithms and Accuracy

6. Stability and Efficiency of Implicit Residual-Based Compact Schemes **107**
C. Corre and A. Lerat

6.1 Introduction . . . 107
6.2 Implicit Schemes Description . . . 108
6.3 Direct Solver Efficiency . . . 112
6.4 Implicit Treatment Description . . . 114
6.5 Iterative Solver Efficiency and Stability . . . 120
6.6 Concluding Remarks . . . 123
6.7 Bibliography . . . 126

7. Higher-Order Time-Integration Schemes for Dynamic Unstructured Mesh CFD Simulations **129**
D. J. Mavriplis and Z. Yang

7.1 Abstract . . . 129
7.2 Introduction . . . 130
7.3 Governing Equations in Arbitrary-Lagrangian-Eulerian (ALE) Form and Base Flow Solver . . . 131
7.4 Higher-order Time Integration and the Discrete Geometric Conservation Law . . . 132
7.5 Mesh Motion Strategies . . . 134
7.5.1 Tension spring analogy . . . 135
7.5.2 Linear elasticity analogy . . . 135
7.6 Acceleration Strategies . . . 137
7.7 Mesh Motion Results . . . 137
7.7.1 Convergence of the mesh motion equations . . . 139
7.8 Unsteady Flow Simulations Using Backwards Difference Schemes . . . 141
7.8.1 Multigrid Convergence Efficiency . . . 141
7.8.2 Time-Accuracy Validation . . . 144
7.9 Implicit-Runge-Kutta Methods for Dynamic Mesh Problems . 147
7.10 Conclusions . . . 151
7.11 Acknowledgments . . . 152
7.12 Bibliography . . . 152
7-A The Geometric Convervation Law for BDF3 . . . 155

8. Explicit Time Domain Finite Element Methods for Electromagnetics **161**
K. Morgan, M. El Hachemi, O. Hassan and N. Weatherill

8.1 Introduction . . . 161
8.2 Electromagnetic Scattering . . . 162
8.2.1 Governing Equations . . . 162
8.2.2 Boundary conditions . . . 163
8.3 Mesh Generation . . . 164
8.4 Numerical Solution Algorithm . . . 164
8.4.1 Time discretisation . . . 164
8.4.2 Discretisation in space . . . 164
8.4.3 Computational details . . . 165
8.5 Numerical Examples . . . 167
8.5.1 PEC sphere . . . 168
8.5.2 PEC almond . . . 168
8.6 Dealing with Electrically Larger Scatterers . . . 169
8.6.1 Higher order Taylor–Galerkin time stepping schemes . 171
8.6.2 Higher order spatial discretisation . . . 173
8.7 Conclusions . . . 176
8.8 Bibliography . . . 178

9. Estimating Grid-Induced Errors in CFD Solutions **183**
T. I-P. Shih

9.1 Introduction . . . 183
9.2 Classification of Methods . . . 184
9.3 Overview of the Discrete Error Transport Equation . . . 186
9.4 DETEs for FV Solutions of the Euler Equations . . . 188
9.4.1 Finite-Volume Method of Solution . . . 189
9.4.2 DETE for the Finite-Volume Method . . . 191
9.5 Usefulness of the DETEs . . . 192
9.5.1 Test Problem 1: Inviscid Flow over an Airfoil . . . 192
9.5.2 Test Problem 2: Viscous Flow over an Iced Airfoil . . 193
9.6 Final Remarks . . . 195
9.7 Bibliography . . . 196

10. Treatment of Vortical Flow Using Vorticity Confinement **199**
J. Steinhoff and N. Lynn

10.1 Abstract . . . 199
10.2 Introduction . . . 200
10.2.1 Basic Concepts . . . 201
10.3 Illustrative One-dimensional Example . . . 204
10.4 Vorticity Confinement . . . 207
10.4.1 Basic Formulation . . . 210
10.4.2 Comparison of the VC2 Formulation to Conventional Discontinuity-Steepening Schemes . 214
10.4.3 Computational Details for the VC2 Formulation . . . 215
10.5 Results . . . 217
10.5.1 Wing Tip Vortices . . . 217
10.5.2 Cylinder Wake . . . 218
10.5.3 Dynamic Stall . . . 219
10.6 Other Studies . . . 220
10.6.1 Missile Base Drag Computation . . . 220
10.6.2 Blade Vortex Interaction (BVI) . . . 220
10.6.3 Turbulent Flow Simulations for Special Effects . . . 221
10.7 Conclusions . . . 221
10.8 Acknowledgments . . . 222
10.9 Bibliography . . . 223

III. Flow Stability and Control

11. Flow Control Applications with Synthetic and Pulsed Jets **241**
R. K. Agarwal, J. Vadillo, Y. Tan, J. Cui, D. Guo, H. Jain, A. W. Cary and W. W. Bower

11.1 Abstract . . . 241
11.2 Introduction . . . 242
11.3 CFD Flow-Solvers Employed . . . 243
11.4 Results and Discussions . . . 244
11.4.1 Virtual Aerodynamic Shape Modification of an Airfoil using a Synthetic Jet Actuator . . . 244
11.4.2 Vectoring Control of a Primary Jet with Synthetic Jets . . . 247
11.4.3 Control of Recirculating Flow Region behind a Backward Facing Step Using Synthetic Jets . . . 250
11.4.4 Interaction of a Synthetic Jet with a Flat Plate Turbulent Boundary Layer . . . 250
11.4.5 Control of Subsonic Cavity Shear Layer Using Pulsed Blowing . . . 254
11.5 Conclusions . . . 260
11.6 Acknowledgments . . . 260
11.7 Bibliography . . . 262

12. Control of Flow Separation over a Circular Cylinder Using Electro-Magnetic Fields: Numerical Simulation **265**
B. H. Dennis and G. S. Dulikravich

12.1 Nomenclature . . . 265

12.2 Introduction . . . 266
12.3 Second Order Analytical Model of EMHD . . . 268
12.4 Least-Squares Finite Element Method . . . 269
12.4.1 Nondimensional First Order Form for Simplified EMHD . . . 270
12.4.2 Verification of Accuracy . . . 273
12.5 Numerical Results . . . 274
12.6 Conclusion . . . 277
12.7 Acknowledgements . . . 278
12.8 Bibliography . . . 278

13. Bifurcation of Transonic Flow over a Flattened Airfoil 285
A. Kuz'min

13.1 Introduction . . . 285
13.2 Problem Statement and a Numerical Method . . . 286
13.3 Analysis of the Lift Coefficient as a Function of M_∞ . . . 286
13.4 Analysis of Stability with Respect to Variation of α . . . 289
13.5 Summary of the Results . . . 290
13.6 Conclusion . . . 290
13.7 Bibliography . . . 291

14. Study of Stability of Vortex Pairs over a Slender Conical Body by Euler Computations 297
J. Cai, H-M. Tsai, S. Luo and F. Liu

14.1 Abstract . . . 297
14.2 Introduction . . . 298
14.3 The Euler Solver and the Flow Model . . . 302
14.4 Computational Grid and Boundary Conditions . . . 303
14.5 Stationary Symmetric and Asymmetric Solutions and Their Stability . . . 306
14.5.1 Temporal Asymmetric Perturbations . . . 306
14.5.2 Stationary Symmetric Vortex Flow . . . 307
14.5.3 Stability of the Stationary Symmetric Vortex Flow . 308
14.5.4 Stability of the Stationary Asymmetric Vortex Flow 310
14.5.5 A Mirror-Image of the Asymmetric Vortex Flow . . . 311
14.5.6 Symmetry Nature of the Present Euler Solver 313
14.5.7 Comparison with Theoretical Predictions on Stability 314
14.5.8 Comparison with Experimental Data on Stability . . 314
14.6 Structure of the Vortex Core . . . 315
14.6.1 Computational Result . . . 315
14.6.2 Comparison with Experimental Data . . . 320
14.7 Summary and Conclusions . . . 322
14.8 Bibliography . . . 323

15. Effect of Upstream Conditions on Velocity Deficit Profiles of the Turbulent Boundary Layer at Global Separation 329
O. S. Ryzhov

15.1 Introduction . . . 329
15.2 Singular Inviscid Pressure Gradient . . . 330
15.3 Governing Equations . . . 331
15.4 Inviscid Sublayer 1 . . . 332
15.5 Outer Turbulent Sublayer 2 . . . 333
15.6 Outer Turbulent Sublayer 3 . . . 333
15.7 Pressure-dominated Flow Pattern . . . 334
15.8 Comparison with Experiment . . . 336
15.9 Conclusion . . . 336
15.10 Bibliography . . . 337

16. Hypersonic Magneto-Fluid-Dynamic Interactions 341
J. S. Shang

16.1 Abstract . . . 341
16.2 Nomenclature . . . 342
16.3 Introduction . . . 342
16.4 Governing Equations . . . 344
16.5 Plasma Models . . . 346
16.6 Electro-Fluid-Dynamic Interaction . . . 349
16.7 Magneto-Fluid-Dynamic Interaction . . . 354
16.8 Concluding Remarks . . . 359
16.9 Acknowledgment . . . 361
16.10 Bibliography . . . 361

IV. Multiphase and Reacting Flows

17. Computing Multiphase Flows Using AUSM$^+$-up Scheme 367
M.-S. Liou and C.-H. Chang

17.1 Abstract . . . 367
17.2 Introduction . . . 368
17.3 Governing Equations (Models) for Multiphase Flows . . . 369
17.3.1 Thermodynamic Equilibrium Model [14] . . . 369
17.3.2 Two-fluid Model . . . 373
17.3.3 Multiphase Stratified Fluid Model . . . 376
17.3.4 Convection fluxes, $F^c_{i\,j\pm1/2}$ . . . 379
17.3.5 Pressure fluxes, $F^p_{i\,j\pm1/2}$ and $F^p_{i\,j}$ . . . 380
17.3.6 The interfacial pressure correction term . . . 381
17.3.7 Time integration . . . 381

17.4 Calculated Examples and Discussion . . . 383
17.4.1 Ransom's faucet problem . . . 383
17.4.2 Air-water shock tube problem . . . 385
17.4.3 Shock-bubble interaction problem . . . 386
17.4.4 Shock-water column interaction problem . . . 389
17.5 Concluding Remarks . . . 389
17.6 Acknowledgments . . . 391
17.7 Bibliography . . . 391
17-A Numerical Flux Formulas . . . 394

18. A Finite-Volume Front-Tracking Method for Computations of Multiphase Flows in Complex Geometries 395
M. Muradoglu

18.1 Introduction . . . 395
18.2 Mathematical Formulation . . . 397
18.3 Numerical Method . . . 399
18.3.1 Integration of the Flow Equations . . . 400
18.3.2 Front-Tracking Method . . . 402
18.3.3 The Overall Solution Procedure . . . 404
18.4 Results and Discussion . . . 405
18.4.1 Oscillating Drop . . . 406
18.4.2 Buoyancy-Driven Falling Drop in a Straight Channel 407
18.4.3 Buoyancy-Driven Rising Drops in a Continuously Constricted Channel . . . 410
18.4.4 Chaotic Mixing in a Drop Moving through a Winding Channel . . . 413
18.5 Conclusions . . . 414
18.6 Bibliography . . . 415
18-A Optimal Artificial Compressibility in the Stokes Limit . . . 419

19. Computational Modeling of Turbulent Flames 421
S.B. Pope

19.1 Introduction . . . 421
19.2 PDF Calculations of Turbulent Flames . . . 422
19.2.1 Piloted Jet Flames . . . 423
19.2.2 Lifted Jet Flame in a Vitiated Co-Flow . . . 423
19.3 Modelling of Turbulent Mixing . . . 425
19.4 Acknowledgment . . . 427
19.5 Bibliography . . . 427

V. Education

20. Educating the Future: Impact of Pedagogical Reform in Aerodynamics 433
D. L. Darmofal

20.1 Introduction . . . 433
20.2 Course Overview . . . 434
20.3 Conceptual Understanding and Active Learning . . . 435
20.4 Integration of Theory, Computation, and Experiment . . . 438
20.5 Project-based Learning . . . 438
20.5.1 Military Aircraft Design Project . . . 439
20.5.2 Blended-Wing Body Design Project . . . 440
20.6 Results . . . 440
20.6.1 Effectiveness of Pedagogy . . . 440
20.6.2 Impact of Pre-Class Homework . . . 442
20.6.3 Student Comments . . . 444
20.7 Outlook . . . 445
20.8 Acknowledgements . . . 446
20.9 Bibliography . . . 446
