TABLE OF CONTENTS

Preface ix

1. Introduction to the Ponderomotive Potential and Overview about Related Phenomena 1

2. Elementary Plasma Properties and Hydrodynamics 9
2.1 Definition of Plasma 9
2.2 Elementary Plasma Parameters 10
2.3 Hydrodynamics 16
2.4 Concept of Microscopic Plasma Theory 28

3. Electrodynamics and Plasma 33
3.1 Maxwell's Equations 33
3.2 Derivation of the Lorentz Force 41
3.3 Schlüters Two Fluid Equations and Optical Properties of Plasma . 45
3.4 Waves in Inhomogeneous Media and Phase between $\boldsymbol{E}$ and $\boldsymbol{H}$ . . 55

4. Hydrodynamic Derivation of the Nonlinear Forces with Ponderomotion 61
4.1 Simple Derivation of the Nonlinear Force for Perpendicular Incidence 61
4.2 Ponderomotive and non-Ponderomotive Terms. Predominance of the Nonlinear Force 64
4.3 Numerical and Experimental Results 67
4.4 Problem at Oblique Incidence 74
4.5 General Derivation of the Nonlinear Force and Hydrodynamic Foundation of the Maxwell Stress Tensor 82
4.6 Generalized Ohm's Law and Solitons 90

5. Hydrodynamic Plasma Properties with the Nonlinear Force 97
5.1 Momentum Transfer 97
5.2 Ponderomotion: the Electric Analogy to Alfvén waves 102
5.3 Ponderomotive and Relativistic Self-Focusing 104

6. Single Particle Derivation of the Nonlinear Force 113
6.1 Quiver Drift and Electric Double Layers 113
6.2 The Boreham Experiment: Conclusion of Longitudinal Optical Fields and Prediction of the Meyerhofer Forward Drift 117

6.3 A Remark to Stephen Hawking 125
6.4 Double Layers and the Genuine Two Fluid Model. Stuttering Interaction and Laser Beam Smoothing 130
6.5 Free Wave Accelerator 144
6.6 Remarks on Very High Intensity Laser Acceleration 150

7. Conclusions and Consequences 153
7.1 Phenomena, Problems and Result 153
7.2 Achievements in Macroscopic Plasma Theory 156
7.3 Achievements in Electron Motion 158
7.4 Final Remarks 159

Appendix 1. Measured Laser Fusion Gains Reproduced by Self-Similar Volume Compression and Volume Ignition for NIF Conditions 163

Appendix 2. Principle of High Accuracy of the Nonlinear Theory for Electron Acceleration in Vacuum by Lasers at Relativistic Intensities 183
