Contents

Preface *xiii*
Foreword *xv*
Future Contributions *xix*

1. Charged Particles in Electromagnetic Fields **1**

1.1. Electrostatic Fields 1
1.1.1. Electrostatic Field Strength and Electrostatic Potential 1
1.1.2. Electrostatic Fields in the Presence of Materials 2
1.1.3. Calculation of Electrostatic Fields 5
1.1.4. Common Types of Electrostatic Field Distributions 7
1.2. Magnetostatic Fields 11
1.2.1. Magnetostatic Fields and Magnetic Materials 11
1.2.2. Forming Magnetostatic Fields 15
1.2.3. Calculation of Magnetostatic Fields 18
1.2.4. Common Types of Magnetostatic Field Distributions 21
1.3. Charged Particle Motion in Electromagnetic Fields 23
1.3.1. General Relations 23
1.3.2. Scaling Laws for Charged Particle Motion in Static Fields 25
1.3.3. Symplectic Relation 27

2. Language of Aberration Expansions in Charged Particle Optics **33**

2.1. Aberration Expansions and Aberration Coefficients 33
2.2. Linear (Paraxial) Approximation 38
2.2.1. Geometric Terms of Paraxial Expansion 38
2.2.2. Description of Chromatically Inhomogeneous Charged Particle Beams 43
2.2.3. Paraxial Symplectic Relations 48
2.2.4. Transfer Matrices 51
2.2.5. Paraxial Properties of Symmetric Systems 53
2.2.6. General Integral Relation for the Rigidity Dispersion in Static Electromagnetic Fields 56
2.3. Image Aberrations 61
2.3.1. Aberrations in Systems with Two Planes of Symmetry 62

2.3.2. Aberrations in Systems with One Plane of Symmetry 67
2.3.3. Aberrations and Resolving Power 70
2.3.4. Symplectic Relations for Aberration Coefficients 71
2.3.5. High-Order Transfer Matrices 73
2.3.6. Elimination of Aberrations in Symmetric Multistage Systems 74
2.4. Calculation of Aberration Expansions 76
2.4.1. Trajectory Method 76
2.4.2. Fringing Field Integral Method 85

3. Transporting Charged Particle Beams in Static Fields 95

3.1. Paraxial Geometric Parameters of Charged Particle Lenses 96
3.2. Axially Symmetric Electrostatic Lenses 98
3.2.1. Conventional Round Lenses 98
3.2.2. Lenses with Object or Image Immersed in the Field 103
3.3. Two-Dimensional and Nearly Two-Dimensional Electrostatic Lenses 105
3.3.1. Two-Dimensional Lenses 105
3.3.2. Transaxial Lenses 106
3.3.3. Hollow Lenses 109
3.4. Crossed Electrostatic Lenses with Essentially Three-Dimensional Fields 110
3.5. Focusing Charged Particles by Electrostatic Mirrors 112
3.6. Axially Symmetric Magnetic Lenses 113
3.7. Quadrupole Lenses and Quadrupole Multiplets 118
3.7.1. Focusing Charged Particles by Quadrupole Fields 119
3.7.2. Aberrations of Quadrupole Lenses 122
3.7.3. Quadrupole Multiplets 124
3.8. Charged Particle Motion Through Periodic Lens Channels 129
3.8.1. Linear Stability of Charged Particle Motion in Periodic Electrostatic Systems 130
3.8.2. Nonlinear Effects in Periodic Lens Channels 137

4. Transporting Charged Particles in Radiofrequency Fields 141

4.1. Pseudopotential of an Inhomogeneous Radiofrequency Field 142
4.2. Transporting Charged Particles in Multipole Radiofrequency Fields 144
4.2.1. Quadrupole Radiofrequency Guide 144
4.2.2. Hexapole and Octopole Radiofrequency Guides 149
4.3. Radiofrequency Repelling Surfaces 151
4.4. Collisional Cooling in Gas-Filled Radiofrequency Guides 154
4.4.1. Transport of Ion Beams Through Gas-Filled Radiofrequency Guides 154
4.4.2. Simulation of Gas-Filled Radio Frequency Guides 159
4.5. Transporting Ions Through Radiofrequency Guides at Intermediate Gas Pressures 161

5. Static Magnetic Charged Particle Analyzers 169

5.1. Linear Optic Properties and Aberrations of a Homogeneous Magnetic Field 169
5.2. Magnetic Sector Analyzers with Object and Image Located in the Field-Free Space 174
5.3. Focusing Action of Inclined Boundaries of Dipole Magnets 179
5.4. Sector Analyzers Using Inhomogeneous Magnetic Fields 182
5.5. Wedge Magnetic Analyzers 186
5.6. Correction of Image Aberrations in Magnetic Analyzers 187
5.6.1. Proper Shaping of Charged Particle Beams 187
5.6.2. Using Multipole Fields for Correction of Geometric and Chromatic Aberrations 189
5.6.3. Using Curved Sector Field Boundaries 194
5.6.4. Using Inhomogeneous Fields 195
5.6.5. Using Symmetric Field Arrangements 196
5.7. Multistage Sector Magnetic Analyzers 196
5.7.1. Rigidity Dispersion in Multiple Magnetic Sector Fields 197
5.7.2. Typical Combinations of Two-Sector Fields 197
5.7.3. Achromatic Multistage Systems 198
5.7.4. Magnetic Mass Analyzers with Energy Focusing 200
5.8. Gas-Filled Magnetic Separators 205

6. Electrostatic Energy Analyzers 213

6.1. Sector Field Electrostatic Energy Analyzers 214
6.1.1. Cylindrical Deflector 214
6.1.2. Toroidal and Spherical Deflectors 217
6.1.3. Creating a Toroidal Field Distribution in a Cylindrical Deflector with Terminating Plates 223
6.1.4. Integral Relation for the Rigidity Dispersion in Electrostatic Sector Fields 226
6.1.5. Multistage Electrostatic Sector Analyzers 227
6.1.6. Preretardation of Charged Particles in Electrostatic Energy Analyzers 228
6.1.7. Fringing Field Effects in Electrostatic Sector Analyzers 229
6.2. Mirror-Type Electrostatic Energy Analyzers 239
6.2.1. Dispersion of Mirror-Type Analyzers 239
6.2.2. Analyzers Focusing in One Direction 242
6.2.3. Cylindrical Mirror Analyzer and its Modifications 245
6.2.4. Planar Field Analyzers Focusing in Two Directions 248
6.2.5. Rotationally Symmetric Mirror Analyzers with Axially Inhomogeneous Fields 250

6.3. Devices for Simultaneous Energy and Angular Analysis of Charged Particles 253
6.3.1. Polar-Toroidal Analyzer 253
6.3.2. Mirror Analyzers for Simultaneous Energy and Angular Analysis 256

7. Mass Analyzers With Combined Electrostatic and Magnetic Fields 259

7.1. Sector Field Mass Analyzers with Energy Focusing 260
7.1.1. Integral Relation for the Rigidity Dispersion in Multistage Analyzers Comprising Electrostatic and Magnetic Sector Fields 260
7.1.2. Mass Analyzers with Electrostatic and Magnetic Sectors Deflecting in One Direction 261
7.1.3. Mattauch–Herzog Mass Analyzer 263
7.2. Wien Filter 265
7.2.1. Paraxial Optical Properties and Aberrations of a Wien Filter 265
7.2.2. Integral Relation for the Rigidity Dispersion in a Wien Filter 268
7.2.3. Fringing Field Effects in a Wien Filter 270
7.3. Penning Traps 271
7.3.1. Fourier Transform Mass Detection 271
7.3.2. Ion Motion in Penning Traps 273
7.3.3. Excitation of Ion Motion in Penning Traps 278
7.3.4. Ion Injection into Penning Traps 280

8. Time-of-Flight Mass Analyzers 283

8.1. Principle of Time-of-Flight Mass Analysis 283
8.2. Forming Pulsed Ion Beams 285
8.2.1. General Ways of Forming Short Ion Bunches 285
8.2.2. Trapping Pulsed Ion Converters 286
8.2.3. Orthogonal Accelerating Pulsed Ion Converter 287
8.2.4. Forming the Primary Time Focus 289
8.3. Energy-Isochronous Time-of-Flight Mass Analyzers Based on Ion Mirrors 293
8.3.1. Energy Focusing in One- and Two-Stage Ion Mirrors with Homogeneous Fields 293
8.3.2. Quadratic Ion Mirrors 297
8.4. Sector Field Energy-Isochronous Time-of-Flight Mass Analyzers 298
8.4.1. Time-of-Flight Mass and Energy Dispersions in Sector Fields 299
8.4.2. Examples of Geometries of Sector Field Time-of-Flight Mass Analyzers 303
8.5. Multireflection Time-of-Flight Mass Analyzers 306
8.5.1. Principles of Multireflection Time-of-Flight Mass Analyzers 306
8.5.2. Sector Field Multiturn Time-of-Flight Analyzers 309
8.5.3. Mirror-Type Multireflection Time-of-Flight Analyzers 311

9. Radiofrequency Mass Analyzers 317

9.1. Quadrupole Mass Filter 317
9.1.1. Principle of Operation of a Quadrupole Mass Filter 317
9.1.2. Mathematical Description of Ion Motion in a Quadrupole Mass Filter 320
9.1.3. Ion Injection into a Quadrupole Filter 325
9.1.4. Nonlinear Effects Due to Field Imperfections in Quadrupole Mass Filters 327
9.1.5. Operation of Quadrupole Mass Filters in Higher-Order Stability Zones 331
9.1.6. Quadrupole Mass Filter in the Radiofrequency-Only Mode 333
9.2. Monopole Mass Filter 335
9.3. Paul Trap 337
9.3.1. Ion Motion in a Paul Trap 338
9.3.2. Injection of Ions Into Paul Traps 341
9.3.3. Ion Extraction from Paul Traps 342
9.3.4. Special Designs of Paul Traps 344
9.4. Linear Ion Trap 346
9.5. Combined Trap 348
