

## Contents

**Preface** VII

**List of Contributors XVII**

<b>1</b>	<b>Introduction</b>	1
	<i>Ian Brown</i>	
<b>2</b>	<b>Plasma Physics</b>	7
	<i>Ian Brown</i>	
2.1	Introduction	7
2.2	Basic Plasma Parameters	8
2.2.1	Particle Density	8
2.2.2	Fractional Ionization	9
2.2.3	Particle Temperature	9
2.2.4	Particle Energy and Velocity	10
2.2.5	Collisions	12
2.3	The Plasma Sheath	13
2.3.1	Debye Length	14
2.3.2	Charge Neutrality	15
2.3.3	Plasma Oscillations	16
2.4	Magnetic Field Effects	17
2.4.1	Gyro Orbits	17
2.4.2	Gyro Frequencies	18
2.4.3	Magnetic Confinement	19
2.4.4	Magnetic and Plasma Pressure	20
2.5	Ionization	21
2.5.1	Electron Impact Ionization	22
2.5.2	Multiple Ionization	23
2.5.3	Photoionization	25
2.5.4	Ion Impact Ionization	26
2.5.5	Negative Ions	27
2.5.6	Field Ionization	27

<b>3</b>	<b>Elementary Ion Sources</b>	29
	<i>Ian Brown</i>	
3.1	Introduction	29
3.2	Terminology	29
3.3	The Quintessential Ion Source	30
3.4	Ion Beam Formation	34
3.5	Ion Beam Parameters	36
3.6	An Example	38
3.7	Conclusion	40
<b>4</b>	<b>Computer Simulation of Extraction</b>	41
	<i>Peter Spädtke</i>	
4.1	Introduction	41
4.2	Positive Ion Sources	42
4.2.1	Filament Driven Cusp Sources	43
4.2.2	Duoplasmatrons and Duopigatrons	44
4.2.3	Vacuum Arc Ion Sources	44
4.2.4	Laser Ion Sources	45
4.2.5	ECR Ion Sources	46
4.2.6	Penning Ion Sources	50
4.3	Negative Ion and Electron Sources	54
4.3.1	Hot Cathode Electron Sources	55
4.3.2	Plasma Electron Sources	55
4.3.3	H <sup>-</sup> Sources	55
4.4	Conclusion	59
<b>5</b>	<b>Ion Extraction</b>	61
	<i>Ralph Hollinger</i>	
5.1	Introduction	61
5.2	Fundamentals of Ion Beam Formation in the Extraction System	62
5.3	Beam Quality	65
5.4	Sophisticated Treatment of Ion Beam Formation in the Extraction System	68
5.5	Multi-Aperture Extraction Systems	76
5.6	Starting Conditions	83
<b>6</b>	<b>Beam Transport</b>	87
	<i>Peter Spädtke and Ralph Hollinger</i>	
6.1	Introduction	87
6.1.1	Drift	91
6.1.2	Extraction System and Acceleration Gap	92
6.1.3	Low Energy Beam Line	92
6.2	Current Effects	93
6.3	Space-Charge Compensation	93
6.3.1	Residual Gas Collisions	93

6.3.2	Sputtering	94
6.3.3	Preserving Space Charge Compensation	95
6.3.4	Influence of Space Charge Compensation	95
6.4	A LEBT System for the Future Proton Linac at GSI	98
6.4.1	Compound System	99
6.4.2	Pentode or Two-Gap System	101
6.4.3	Triode System and DC Post-Acceleration	102
6.4.4	Discussion	105
<b>7</b>	<b>High Current Gaseous Ion Sources</b>	<b>107</b>
	<i>Nikolai Gavrilov</i>	
7.1	Introduction	107
7.2	Basic Types of High Current Ion Sources	108
7.2.1	Filament Driven Ion Sources	110
7.2.2	High-Frequency Ion Sources	116
7.2.3	Cold Cathode Ion Sources	121
7.3	Conclusion	130
<b>8</b>	<b>Freeman and Bernas Ion Sources</b>	<b>133</b>
	<i>Marvin Farley, Peter Rose, and Geoffrey Ryding</i>	
8.1	Introduction	133
8.2	The Freeman Ion Source	134
8.3	The Bernas Ion Source	138
8.4	Further Discussion of the Source Plasma	141
8.4.1	Plasma and Sheath Potentials	144
8.4.2	Effect of Sputtering on the Plasma	146
8.4.3	Ion Heating of the Cathode and Anticathode in the Bernas Source	148
8.4.4	Current Balance in the Freeman Source	150
8.4.5	Current Balance in the Bernas Source	151
8.5	Control Systems	154
8.5.1	Freeman and Bernas Controls	154
8.5.2	Bernas Indirectly Heated Cathode	155
8.6	Lifetime and Maintenance Issues	158
8.6.1	Use of $\text{BF}_3$	158
8.6.2	Use of $\text{PH}_3$ , $\text{AsH}_3$ , $\text{P}_4$ , and $\text{As}_4$	159
8.6.3	Use of Sb, $\text{Sb}_2\text{O}_3$ , and $\text{SbF}_3$	159
8.6.4	Use of $\text{SiF}_4$ and $\text{GeF}_4$	159
8.6.5	General Guidelines for the Use of Other Organic and Inorganic Compounds	160
8.6.6	Electrode Cleaning and Maintenance	160
8.6.7	Insulator Cleaning and Maintenance	160

<b>9</b>	<b>Radio-Frequency Driven Ion Sources</b>	163
	<i>Ka-Ngo Leung</i>	
9.1	Introduction	163
9.2	Capacitively Coupled RF Sources	163
9.3	Inductively Coupled RF Sources	165
9.3.1	Source Operation with an External RF Antenna	165
9.3.2	Multicusp Source Operation with Internal RF Antenna	167
9.3.3	Increasing the Ion Beam Brightness of a Multicusp RF Source with Internal Antenna	169
9.3.4	Multicusp Source Operation with External RF Antenna	171
9.4	Applications of RF Ion Sources	174
<b>10</b>	<b>Microwave Ion Sources</b>	177
	<i>Noriyuki Sakudo</i>	
10.1	Introduction	177
10.2	Microwave Plasma in Magnetic Fields	177
10.2.1	Plasma Parameter Changes due to Magnetic Field and Microwave Frequency	177
10.2.2	High Density Plasma at Off-Resonance	178
10.3	Some Practical Ion Source Considerations	180
10.3.1	Microwave Impedance Matching to the Plasma	180
10.3.2	High Current Ion Beams Extracted from an Off-Resonance Microwave Ion Source	183
10.4	Versatility of Beam Extraction	184
10.4.1	Large Cross Sectional Beam formed by a Multi-Aperture Extractor	184
10.4.2	Slit-Shaped Beam for Ion Implantation	185
10.4.3	Further Improvements in Slit-Shaped Beams	188
10.4.4	Compact Microwave Ion Sources	190
10.5	Diversity of Available Ion Species	191
10.6	Microwave Ion Sources for Commercial Implanters	194
10.6.1	Semiconductor Device Fabrication	194
10.6.2	SOI Wafer Fabrication	198
10.7	Conclusion	199
<b>11</b>	<b>ECR Ion Sources</b>	203
	<i>Daniela Leitner and Claude Lyneis</i>	
11.1	Introduction	203
11.2	Brief History of the Development of ECR Ion Sources	204
11.3	The LBNL ECR Ion Sources	207
11.3.1	The AECL-U Ion Source	207
11.3.2	The VENUS ECR Ion Source	208
11.4	Physics and Operation of ECR Ion Sources	210
11.4.1	Electron Impact Ionization	210
11.4.2	Charge Exchange	211
11.4.3	Plasma Confinement	212

11.4.4	ECR Heating	214
11.4.5	Gas Mixing	215
11.5	Design Considerations	216
11.6	Microwave and Magnetic Field Technologies	217
11.7	Metal Ion Beam Production	218
11.7.1	Direct Insertion	219
11.7.2	Sputtering	220
11.7.3	Gaseous or Volatile Compounds (MIVOC Method)	220
11.7.4	External Furnaces (Ovens)	221
11.7.5	Efficiencies	222
11.8	Ion Beam Extraction from ECR Ion Sources	223
11.8.1	Influence of Magnetic Field and Ion Temperature on the Extracted Ion Beam Emittance	223
11.8.2	Influence of Plasma Confinement on Beam Emittance	225
11.9	Conclusion	227
<b>12</b>	<b>Laser Ion Sources</b>	<b>233</b>
	<i>Boris Sharkov</i>	
12.1	Introduction	233
12.2	Basics of Laser Plasma Physics	234
12.3	General Description	235
12.3.1	Laser Characteristics	235
12.3.2	Target Illumination System	237
12.3.3	Target Ensemble	238
12.3.4	Pulse Width and Target-Extractor Separation	239
12.3.5	Extraction System	240
12.3.6	Low Energy Beam Transport Line (LEBT)	242
12.4	Beam Parameters	244
12.4.1	Current Profile	244
12.4.2	Charge State Distribution	245
12.4.3	Beam Emittance	246
12.4.4	Pulse Stability and Source Lifetime	247
12.5	Sources at Accelerators	248
12.5.1	The LIS at ITEP-TWAC	248
12.5.2	The LIS at CERN	250
12.5.3	The LIS at JINR Dubna	252
12.6	Other Operating Options	252
12.6.1	High Current, Low Charge State Mode	252
12.6.2	Influence of Magnetic Field on the Laser Ion Source Plasma	253
12.7	Conclusion	254
<b>13</b>	<b>Vacuum Arc Ion Sources</b>	<b>257</b>
	<i>Efim Oks and Ian Brown</i>	
13.1	Introduction	257
13.2	Background	258

13.3	Vacuum Arc Plasma Physics	259
13.4	Principles of Operation	260
13.5	Beam Parameters	262
13.5.1	Beam Current	262
13.5.2	Beam Profile, Divergence and Emittance	264
13.5.3	Beam Composition	265
13.5.4	Beam Noise, Pulse Stability, and Lifetime	267
13.6	Recent Improvements in Parameters and Performance	268
13.6.1	Enhancement of Ion Charge States	268
13.6.2	Alternative Triggering of the Vacuum Arc	271
13.6.3	Reduction in Ion Beam Noise and Increased Pulse Stability	273
13.6.4	Generation of Gaseous Ions	274
13.7	Source Embodiments	275
13.7.1	LBNL Mevva Sources	276
13.7.2	HCEI Titan Sources	277
13.7.3	NPI Raduga Sources	278
13.7.4	GSI Varis Sources	279
13.7.5	Other Versions and Variants	280
13.8	Conclusion	282
<b>14</b>	<b>Negative Ion Sources</b>	<b>285</b>
	<i>Junzo Ishikawa</i>	
14.1	Introduction	285
14.2	Surface Effect Negative Ion Sources	285
14.2.1	Negative Ion Production by Surface Effect	285
14.2.2	Surface Effect Light Negative Ion Sources	292
14.2.3	Surface Effect Heavy Negative Ion Sources	296
14.3	Volume Production Negative Ion Sources	303
14.3.1	Negative Ion Formation by Volume Production	303
14.3.2	History of Source Development	304
14.3.3	Recent Volume Production Negative Ion Sources	305
14.4	Charge Transfer Negative Ion Sources	306
14.4.1	Negative Ion Production by Charge Transfer	306
14.4.2	History of Charge Transfer Negative Ion Sources	308
14.5	Conclusion	308
<b>15</b>	<b>Ion Sources for Heavy Ion Fusion</b>	<b>311</b>
	<i>Joe Kwan</i>	
15.1	Introduction	311
15.1.1	Heavy Ion Beam Driven Inertial Fusion	311
15.1.2	HIF Ion Source Requirements	312
15.2	Beam Extraction and Transport	314
15.2.1	Scaling Laws for Beam Extraction and Transport	314
15.2.2	Large Beam vs. Multiple Small Beamlets	317
15.3	Surface Ionization Sources	318

15.3.1	Contact Ionizers	318
15.3.2	Aluminosilicate Sources	322
15.3.3	Surface Ionization Sources for HIF	326
15.4	Gas Discharge Ion Sources for HIF	326
15.5	Pulsed Discharge Sources	330
15.5.1	Metal Vapor Vacuum Arc Sources for HIF	330
15.8.1	Laser Ion Sources for HIF	333
15.6	Negative Ion Sources for HIF	333
15.7	HIF Injector Designs	335
15.7.1	Large Diameter Source Approach	335
15.7.2	Merging Multiple Beamlets Approach	336
15.8	Conclusion	338
<b>16</b>	<b>Giant Ion Sources for Neutral Beams</b>	<b>341</b>
	<i>Yasuhiko Takeiri</i>	
16.1	Introduction	341
16.2	Large Volume Plasma Production	342
16.2.1	Bucket Plasma Sources with Multi-Cusp Magnetic Field	342
16.2.2	Plasma Modeling	344
16.2.3	Atomic Fraction	347
16.3	Large Area Beam Extraction and Acceleration	348
16.3.1	Electrode Systems for Large Area Beams	348
16.3.2	Beamlet Steering	350
16.4	Giant Positive Ion Sources	353
16.5	Giant Negative Ion Sources	359
16.5.1	Operational Principles of Negative Ion Sources	359
16.5.2	Negative Ion Extraction and Acceleration	363
16.5.3	Giant Negative Ion Sources	366
16.6	Future Directions of Development	369
<b>Appendices</b>	<b>373</b>	
Appendix 1	Physical Constants	373
Appendix 2	Some Plasma Parameters	374
Appendix 3	Table of the Elements	374
<b>Index</b>	<b>377</b>
