Contents

Part I General Concepts

1 Reaction Kinetics 3
1.1 Rate Equations 3
1.2 Linear Stability Analysis 4
1.2.1 One-Variable Systems 6
1.2.2 Two-Variable Systems 7
1.2.3 Systems with $n > 2$ Variables 10
1.3 Chemical Kinetics 11
1.4 Chemical and Biological Models 14
1.4.1 Branching-Coalescence Model 15
1.4.2 Schlögl Model I 16
1.4.3 Verhulst Equation 17
1.4.4 Brusselator 17
1.4.5 Schnakenberg Model 19
1.4.6 Gierer–Meinhardt Model 20
1.4.7 Gray–Scott Model 20
1.4.8 Oregonator 24
1.4.9 Lengyel–Epstein Model 26
Exercises 30

2 Reactions and Transport: Diffusion, Inertia, and Subdiffusion 33
2.1 Reaction–Diffusion Equation 33
2.1.1 Phenomenological Derivation of the Reaction–Diffusion Equation 34
2.1.2 n-Variable Reaction–Diffusion Equations 35
2.2 Reaction–Transport Equations with Inertia 36
2.2.1 Hyperbolic Reaction–Diffusion Equations 37
2.2.2 Reaction-Cattaneo Systems and Reaction-Telegraph Equations 38
2.2.3 Persistent Random Walks and Reactions 39
2.3 Reactions and Anomalous Diffusion 43

2.3.1 Continuous-Time Random Walks 44
2.3.2 Reaction–Subdiffusion Equations 48
Exercises 53

3 Random Walks and Mesoscopic Reaction–Transport Equations 55
3.1 Discrete-Time Random Walk 57
3.1.1 Mesoscopic Equation for the Particle Density 58
3.1.2 Random Walk with Two States and the System of Two Mesoscopic Equations 59
3.2 Continuous-Time Random Walk 60
3.2.1 Mesoscopic Equation for the Particle Density 64
3.2.2 Random Walk with Discrete States in Continuous-Time .. 66
3.2.3 Semi-Markov Processes 67
3.3 Markov CTRW Models 69
3.3.1 Compound Poisson Process 69
3.3.2 System of Two Mesoscopic Equations 71
3.3.3 Characteristic Function and Transport Equation for the Particle Density 72
3.3.4 Lévy Processes 75
3.4 Non-Markovian CTRW Models with Chemical Reactions 79
3.4.1 Model A 79
3.4.2 Model B 82
3.4.3 Model C 83
3.5 Random Walk in Random Time and Subordination 85
3.5.1 Space-Fractional Transport Equation 87
3.5.2 Inverse Subordination and Time-Fractional Transport Equation 90
3.6 Macroscopic Description 91
3.6.1 Scaling Procedure 92
3.6.2 Anomalous Scaling 94
3.6.3 Scaling and Convergence to the Diffusion Process 99
3.7 Transport Equations and Underlying Stochastic Processes 102
3.7.1 Brownian Motion, Lévy Flight, and the Diffusion Equations 102
3.7.2 Transport Equations: Forward vs Backward 104
3.7.3 Chapman–Kolmogorov Equation and Infinitesimal Generators 106
3.7.4 Convection–Diffusion Equation with Reactions 116
Exercises 119

Part II Front Propagation

4 Reaction–Diffusion Fronts 123
4.1 Propagating Fronts 123

4.1.1 Fronts Propagating into Unstable States. Pulled vs Pushed Fronts 126
4.1.2 Transient Dynamics of Pulled Fronts 129
4.1.3 Front Propagation into Metastable States 130
4.2 Front Velocity Selection 132
4.2.1 Hamilton–Jacobi Formalism 133
4.2.2 Variational Characterization 135
4.3 Effect of Low Concentrations 140
4.3.1 Effect on Pulled Fronts 140
4.3.2 Effect on Pushed Fronts 141
4.3.3 Variational Principles and the Cutoff Problem 142
4.4 Effect of External Noise 144
4.5 Effect of Time Delay and Age Structure 146
4.6 Multi-Component Reaction–Diffusion Systems 148
4.6.1 Two-Component RD system 149
Exercises 150

5 Reaction–Transport Fronts Propagating into Unstable States 155
5.1 Hyperbolic Scaling and Hamilton–Jacobi Equation for the Front Position 157
5.1.1 Discrete-Time Model 157
5.2 Continuous-Time Model with Long-Range Dispersal 159
5.3 CTRW Models and Front Propagation 160
5.4 Memory Effects in RD Equation 164
5.5 Front Propagation in the Reaction-Telegraph Equation 166
5.5.1 Relativistic Hamilton–Jacobi Equation 167
5.5.2 Exact Formula for Front Velocity 168
5.6 Front Propagation in Persistent Random Walks with Reactions 169
5.6.1 Fronts in Direction-Independent Reaction Walks 169
5.6.2 Fronts in Direction-Dependent Reaction Walks 172
5.7 Reaction-Biased Random Walks. Propagation Failure 175
Exercises 180

6 Reaction–Diffusion Fronts in Complex Structures 183
6.1 Diffusion on Fractals 183
6.2 Reaction–Diffusion Fronts on Fractals 189
6.3 Reaction–Transport Fronts on Comb Structures 190
6.3.1 Comb-Like Structures 190
6.3.2 Diffusion and Front Propagation 194
6.3.3 Front Propagation on Oriented Graphs 196
6.4 Reaction–Diffusion Fronts in General Heterogeneous Media 198
6.4.1 Singular Perturbation Analysis 200

6.4.2 Local Velocity Approach . . . 203
6.4.3 Hamilton–Jacobi Formalism . . . 204
Exercises . . . 207

7 Ecological Applications . . . 209
7.1 Human Migrations . . . 209
7.1.1 Neolithic Transition: Single-Species Models . . . 209
7.1.2 Hunter-Gatherers Interaction: Indo-European Neolithic Transition . . . 215
7.1.3 Model for Human Settlements . . . 216
7.1.4 Models with Dispersive Variability . . . 218
7.1.5 Neanderthal Extinction . . . 227
7.1.6 US Colonization: Invasions Through Fractal River Networks . . . 228
7.2 Avian Range Expansions . . . 232
7.2.1 House Finch . . . 233
7.2.2 Eurasian Collared Dove . . . 234
7.3 Plant Invasions . . . 234
7.3.1 The Model. Invasion Threshold . . . 236
7.3.2 Applications to the Invasion Success of Weeds . . . 239
7.3.3 Invasion Velocity of Weeds . . . 242
Exercises . . . 244

8 Biomedical Applications . . . 245
8.1 Cancer Invasion . . . 245
8.1.1 Tumor–Host Interaction . . . 245
8.1.2 Tumor–Host Interaction with Contact Inhibition . . . 248
8.1.3 Glioma Invasion . . . 250
8.2 Virus Dispersal in Bacterial Colonies . . . 255
8.3 Propagation in Spiny Dendrites . . . 259
8.3.1 Mesoscopic Model . . . 261
8.3.2 Biologically Inert Particles: Anomalous Diffusion . . . 264
8.3.3 Kinetics of Particle Decay in Spiny Dendrites . . . 265
Exercises . . . 266

Part III Spatial Instabilities and Patterns

9 Persistence and Extinction of Populations in Finite Domains . . . 269
9.1 Critical Patch Size . . . 269
9.2 Bifurcation Diagrams: Stability of Spatial Patterns . . . 274
9.3 Normal Solution Expansion . . . 276
9.3.1 Compensation Growth . . . 279

9.3.2 Depensation Growth . . . 280
9.3.3 Critical Depensation . . . 281
9.4 Exact Solutions . . . 283
Exercises . . . 285

10 Turing Instabilities in Homogeneous Systems . . . 287
10.1 Turing Instabilities in Standard Reaction–Diffusion Systems . . . 287
10.1.1 n-Variable Reaction–Diffusion Systems . . . 288
10.1.2 Two-Variable Reaction–Diffusion Systems . . . 292
10.1.3 Turing Instability in the Standard Brusselator Reaction–Diffusion System . . . 296
10.2 Turing Instabilities in HRDEs and Reaction-Cattaneo Systems . . . 297
10.2.1 Turing Instabilities in Hyperbolic Reaction–Diffusion Equations . . . 297
10.2.2 Turing Instabilities in Reaction-Cattaneo Systems . . . 299
10.3 Turing Instabilities in Persistent Random Walks with Reactions . . . 300
10.3.1 Turing Instabilities in Direction-Independent Reaction Walks . . . 301
10.3.2 Spatial Hopf Instabilities in Direction-Independent Reaction Walks . . . 306
10.3.3 Spatial Instabilities in One-Variable Systems . . . 310
10.3.4 Turing Instabilities in Direction-Dependent Reaction Walks . . . 312
10.4 Turing Instabilities and Anomalous Diffusion . . . 316
10.4.1 Turing Instabilities in Reaction–Subdiffusion Systems: Model B . . . 316
10.4.2 Turing Instabilities in Reaction–Subdiffusion Systems: Model A and Other Approaches . . . 326
10.4.3 Turing Instability in the Superdiffusive Brusselator . . . 327
Exercises . . . 329

11 Turing Instabilities in Reaction–Diffusion Systems with Temporally or Spatially Varying Parameters . . . 333
11.1 Turing Instability with Time-Varying Diffusivities . . . 334
11.2 Turing Instability with Spatially Inhomogeneous Diffusivities . . . 340
Exercises . . . 344

12 Chemical and Biological Applications of Turing Systems . . . 345
12.1 Turing Patterns in the CIMA/CDIMA and BZ Reactions . . . 346
12.1.1 Continuously Fed Unstirred Chemical Reactor . . . 346
12.1.2 Turing Patterns in the CIMA and CDIMA Reactions: Experiments . . . 348
12.1.3 Theory of Turing Patterns in the CIMA and CDIMA Reactions: Lengyel–Epstein Model . . . 349

12.1.4 Theory of Turing Patterns in the CIMA and CDIMA Reactions: "2+1" Model 351
12.1.5 Turing Patterns in the BZ-AOT Reaction: Experiments ... 356
12.1.6 Turing Patterns in the BZ-AOT Reaction: Theory 357
12.2 Turing Mechanism in Biological Pattern Formation 360
12.2.1 Hair-Follicle Patterning 360
12.2.2 Left–Right Asymmetry in the Mouse Embryo 362
Exercises 363

13 Pattern Formation in Spatially Discrete Systems 365
13.1 Linear Stability Analysis 366
13.1.1 Routh–Hurwitz Analysis 367
13.1.2 Structural Mode Analysis 368
13.2 Instabilities in Diffusively Coupled Reactor Networks 372
13.3 Networks of Diffusively Coupled Reactors with Lengyel–Epstein Kinetics 375
13.3.1 Turing Threshold 375
13.3.2 Turing Instability in Small Arrays 378
13.4 Localized Patterns in Homogeneous Networks of Diffusively Coupled Reactors 387
13.4.1 Theoretical Tools 389
13.4.2 Localized Pattern in Networks with Lengyel–Epstein Kinetics 393
13.5 Turing Instability in Large Arrays 401
13.6 Turing Instability in Small Inhomogeneous Arrays 402
13.6.1 Two Coupled Reactors 404
13.6.2 Three Coupled Reactors 406
13.6.3 Four Coupled Reactors 409
13.7 Networks of Photochemically Coupled Reactors 410
13.7.1 Photosensitive BZ and CDIMA Reactions 411
13.7.2 Stability Analysis of Photochemically Coupled Reactors . 412
13.7.3 Instability Thresholds 414
13.7.4 Oregonator-Type Kinetics 415
13.7.5 Lengyel–Epstein-Type Kinetics 416
Exercises 420

A Kronecker Product 421
A.1 Definition 421
A.2 Fundamental Properties 421
