UNITS AND SYMBOLS	xvi
1. SOLID PHASES OF THE WATER SUBSTANCE	1
1.1. The water molecule	1
1.1.1. Composition of the water substance	1
1.1.2. Energies of formation and dissociation of a water molecule	2
1.1.3. Polar nature of the water molecule	3
1.1.4. The infrared spectrum; moments of inertia and vibrational energy levels of the water molecule	4
1.1.5. Geometrical structure of the water molecule	8
1.1.6. Forces between the atoms	9
1.1.7. Quadrupole and octupole moments of the water molecule	10
1.1.8. Bonding of the water molecule	12
1.1.8.1. Valence and molecular orbital theories	12
1.1.8.2. Distribution of the electrons	15
1.1.8.3. Point-charge models	17
1.2. Structure of ice Ih	18
1.2.1. Geometrical arrangement of the oxygen atoms	18
1.2.2. Positions of the hydrogen atoms; zero-point entropy	25
1.2.3. Dipole moment of the water molecule in ice Ih	33
1.2.4. Nature of the bonding in ice Ih; a point-charge model	38
1.2.5. Energy of the hydrogen bond in ice Ih	39
1.3. Solid phases of water at low temperatures: cubic and amorphous ice	44
1.3.1. Structural studies	44
1.3.2. Calorimetric and other studies	54
1.3.3. Relative stabilities of ice Ih and Ice Ic	57
1.3.4. Summary	60
1.4. Solid phases of water at high pressures	60
1.4.1. Phase relationships	60
1.4.2. Crystallographic structures	67
1.4.2.1. Experimental techniques	67
1.4.2.2. Ice II	68
1.4.2.3. Ice III and ice IX	70
1.4.2.4. Ice V and ice IV	72
1.4.2.5. Ice VI	75
1.4.2.6. Ice VII	77
1.4.2.7. Ice VIII	78
1.4.3. Summary	78
1.5. Superheated ice	78
1.6. The clathrate hydrates	80

<b>2. ELECTRICAL PROPERTIES</b>	82
2.1. Introduction	82
2.2. Experimental studies of the dielectric and conduction properties of ice	82
2.2.1. Concepts and definitions	82
2.2.2. Measurements on pure ice	87
2.2.2.1. Introduction	87
2.2.2.2. High frequency relative permittivity	89
2.2.2.3. Static relative permittivity	89
2.2.2.4. Dielectric relaxation time	92
2.2.2.5. Frequency dependence of the relative permittivity	94
2.2.2.6. High frequency conductivity	95
2.2.2.7. Direct current conductivity; surface effects	97
2.2.2.8. Concentrations and mobilities of charge carriers in ice	104
2.2.2.9. Nature of the charge carriers in ice	111
2.2.3. Measurements on doped ice	112
2.2.3.1. Hydrofluoric acid	113
2.2.3.2. Ammonia and ammonium hydroxide	117
2.2.3.3. Ammonium fluoride	117
2.2.3.4. Other impurities	119
2.2.4. Effects of pressure	120
2.2.5. Effects of deformation	121
2.2.6. Cubic and high pressure forms of ice	121
2.3. Theoretical studies of the dielectric and conduction properties of ice	124
2.3.1. The Debye equation and the static relative permittivity of ice	124
2.3.2. Point defects in ice; Bjerrum and ionization defects	131
2.3.3. Electrical properties and point defects	140
2.3.3.1. Outline of the theory	141
2.3.3.2. Jaccard's quantitative treatment	143
2.3.3.3. Space-charge limited currents	161
2.3.3.4. Effects of pressure	162
2.3.3.5. Effects of deformation	164
2.3.3.6. Cubic and high pressure forms of ice	164
2.3.4. Migration of protons and Bjerrum defects in ice	166
2.4. A contrary view	167
2.5. Thermoelectric effect	169
2.5.1. Experimental results	169
2.5.2. Theory	179
2.6. Charge storage	187
2.6.1. Ice electrets	187
2.6.1.1. Experimental observations	187
2.6.1.2. Theoretical interpretations	191
2.6.2. Ferroelectric behaviour of ice	194
2.7. Some applications	197
2.7.1. Ice rectifiers	197
2.7.2. Ice as a catalyst for biochemical reactions	198

<b>3. OPTICAL PROPERTIES</b>	200
3.1. Optical properties of ice	200
3.1.1. Refraction	200
3.1.1.1. Concepts and definitions	200
3.1.1.2. Refractive indices	201
3.1.1.3. Polarization effects	203
3.1.2. Absorption and reflection	205
3.1.2.1. Definitions	205
3.1.2.2. Experimental results	207
3.1.3. Emissivity	222
3.1.4. Luminescence and thermoluminescence	223
3.1.4.1. Definitions	223
3.1.4.2. Fluorescence	224
3.1.4.3. Rayleigh scattering	226
3.1.4.4. Thermoluminescence	226
3.1.4.5. Colour centres	230
3.2. Interpretations of the infrared and Raman spectra of ice	231
3.2.1. Infrared spectra	231
3.2.1.1. Wave numbers less than $1000\text{ cm}^{-1}$	232
3.2.1.2. Wave numbers between $1000$ and $4000\text{ cm}^{-1}$	237
3.2.1.3. Wave numbers above $4000\text{ cm}^{-1}$	239
3.2.2. Infrared contribution to the low frequency refractive index and relative permittivity	239
3.2.3. Force constants for the vibrations	244
3.3. Vibrational spectra of the polymorphs of ice	245
3.4. Some applications	246
3.4.1. Absorption of solar radiation by ice and snow; artificial modifications of the albedo	246
3.4.2. Instability of Arctic sea ice	247
3.4.3. Radio echo soundings through polar ice	247
<b>4. MECHANICAL PROPERTIES</b>	249
4.1. Dislocations in ice	249
4.2. Elastic properties of ice	254
4.2.1. Definitions	254
4.2.2. Elastic constants and the propagation of sound	256
4.2.3. Dispersion of phonons and scattering of neutrons	264
4.3. Anelasticity of ice	267
4.3.1. Definitions	267
4.3.2. Experimental	268
4.3.3. Internal friction due to proton reorientation	269
4.3.4. Internal friction due to grain boundaries	272
4.3.5. Internal friction due to impurities	272
4.3.6. Internal friction of natural ice	273
4.4. Plastic deformation of single crystals of ice	274
4.4.1. Basal glide	275
4.4.2. Non-basal glide	279

4.4.3. Creep of pure single crystals of ice	280
4.4.4. Effect of impurities on the plastic deformation of ice single crystals	300
4.5. Plastic deformation of polycrystalline ice	305
4.5.1. Creep of polycrystalline ice	305
4.5.2. Hardness of ice	321
4.5.3. Mechanisms involved in the deformation of polycrystalline ice	325
4.5.3.1. Deformation at temperatures below $-10^{\circ}\text{C}$ ; micro-creep regime	325
4.5.3.2. Deformation at temperatures above $-10^{\circ}$ ; grain-boundary regime	325
4.5.3.3. Deformation at temperatures above about $-3^{\circ}$ ; pressure melting regime	326
4.5.3.4. Creep at high stresses	328
4.6. Fracture of ice	328
4.7. Some applications	337
4.7.1. Flow of glaciers	337
4.7.2. Ice engineering	342
<b>5. THERMAL PROPERTIES AND DIFFUSION IN ICE</b>	<b>346</b>
5.1. Pressure-volume-temperature relationships	346
5.1.1. Density, thermal expansions and compressibility	346
5.1.2. Effect of pressure on the melting temperature of ice; regelation	351
5.2. Thermal conductivity	357
5.3. Thermal energy	361
5.3.1. Latent heats	361
5.3.2. Heat capacities and zero-point entropy	362
5.4. Theoretical interpretations of thermal properties	365
5.4.1. Heat capacity	365
5.4.2. Vibrational amplitudes in ice	371
5.4.3. Thermal expansion	374
5.4.4. Thermal conductivity	375
5.5. Volume diffusion in ice	376
5.5.1. Concepts and definitions	377
5.5.2. Experimental results	378
5.5.3. Mechanisms for diffusion	385
5.6. Some applications	389
5.6.1. Growth of ice sheets	389
5.6.2. Thomson crystals	391
<b>6. SURFACE PROPERTIES</b>	<b>392</b>
6.1. Surface structure	392
6.1.1. Theories for 'liquid-like' layer on ice	392
6.2. Sintering and adhesion	397
6.2.1. Early work	397
6.2.2. Recent work	399
6.3. Adhesion of ice to solid surfaces	408

6.4. Friction of ice; skiing and skating	411
6.5. Surface electrical potential; charge separation by frictional rubbing	422
6.6. Etching of ice	424
6.7. Surface energies of ice	434
6.8. Condensation and evaporation coefficients	441
6.9. Adsorption of gases on ice	443
6.9.1. Definitions and concepts	443
6.9.2. Experimental results and discussion	447
6.10. Some applications	453
6.10.1. Changes in the strength and density of old snow	453
6.10.2. Sliding of glaciers	454
6.10.3. The distribution of liquid water in a temperate glacier	458
<b>7. NUCLEATION OF ICE</b>	<b>461</b>
7.1. Types of nucleation	461
7.2. Homogeneous nucleation	461
7.2.1. Theory	461
7.2.2. Experimental results	467
7.3. Macroscopic theory of heterogeneous nucleation	472
7.3.1. General equations	472
7.3.2. Particle size and contact angle effects	474
7.3.3. Lattice misfit and entropy effects	479
7.3.4. Effects of dislocations, steps, corners and pits	481
7.3.5. Freezing of drops	484
7.3.5.1. Statistical and singular models	484
7.3.5.2. Differential and cumulative nucleus concentrations	486
7.3.6. Freezing versus deposition	489
7.3.7. Application and extension of the theory to silver iodide particles	490
7.4. Experimental studies of heterogeneous nucleation	493
7.4.1. Freezing of water drops	494
7.4.2. Ice nucleation by particulates	501
7.4.2.1. Activity of some inorganic ice nuclei	501
7.4.2.2. Preactivation and capillary effects	504
7.4.2.3. Ice nucleation by silver iodide	507
7.4.2.4. Organic ice nuclei	511
7.4.3. Epitaxial growth on single crystal substrates	514
7.4.4. Nucleation of the high pressure polymorphs of ice	519
7.5. The requirements of an ice nucleus: a summary of the present position	522
<b>8. GROWTH OF ICE FROM THE VAPOUR PHASE</b>	<b>524</b>
8.1. Early observations on snow crystals	524
8.2. Laboratory studies of the habits of ice crystals	526
8.2.1. Effects of temperature and supersaturation	526
8.2.2. Effects of nuclei, gases and vapours	538
8.2.3. Effects of electric fields	542

8.3. Growth rates of ice crystals	544
8.3.1. Linear growth rates	544
8.3.2. Mass growth rates	549
8.4. Step propagation on ice and theories for the variation of ice crystal habits with temperature	555
8.4.1. Introduction	555
8.4.2. Step propagation across ice crystals	556
8.4.3. Theories for the variation of ice crystal habits with temperature	565
8.5. 'Negative' ice crystals	568
8.6. Some applications	569
8.6.1. Depth hoar	570
8.6.2. Hoarfrost	571
<b>9. GROWTH OF ICE FROM THE LIQUID PHASE</b>	<b>572</b>
9.1. Growth habits of ice formed in supercooled water	572
9.1.1. Slightly supercooled water	572
9.1.2. Strongly supercooled water	577
9.1.3. Summary and discussion	581
9.2. Growth rates of ice in supercooled water	583
9.2.1. Growth rates perpendicular to the c-axis	583
9.2.2. Growth rates parallel to the c-axis	585
9.2.3. Growth rates of non-rational ice dendrites	586
9.2.4. Growth rates in supercooled aqueous solutions	588
9.3. Internal melting of ice	589
9.4. Planar growth	591
9.4.1. Mechanism of planar growth	592
9.4.2. The preferred orientation in planar growth	593
9.5. Differential incorporation of impurities into ice growing from solutions	600
9.5.1. Concepts and definitions	600
9.5.2. Experimental results	603
9.5.3. Discussion of results	605
9.6. Freezing potentials	607
9.6.1. Experimental results	607
9.6.2. Theoretical models	613
9.7. Freezing of water drops	615
9.7.1. Heat balance; fragmentation during freezing	615
9.7.2. Distribution of air bubbles	619
9.7.3. Grain structure and crystallographic orientations	622
9.8. Some applications	625
9.8.1. Frazil and anchor ice	625
9.8.2. Cryobiology	626
<b>10. ICE IN THE ATMOSPHERE</b>	<b>630</b>
10.1 Origins of ice particles in clouds	630
10.1.1. Experimental techniques for studying ice nuclei	630
10.1.2. Concentrations and origins of natural ice nuclei	631
10.1.3. Concentrations of ice nuclei and ice particles in clouds; ice multiplication	635

10.2. Growth of ice particles in clouds	637
10.2.1. Deposition from the vapour phase	638
10.2.2. Aggregation of ice particles	638
10.2.3. Accretion of water droplets	642
10.2.4. Growth of hailstones	645
10.2.5. Seeding of clouds with artificial ice nuclei	649
10.3. Solid precipitation and ice particles in clouds	650
10.3.1. Direct observation, photography and replication	650
10.3.2. Collection and detection from aircraft	652
10.3.3. Classification	653
10.3.4. Dependence of the habits of natural snow and ice crystals on meteorological conditions	653
10.3.5. Masses, dimensions, and densities	662
10.3.6. Terminal velocities and modes of fall	671
10.4. Optical phenomena produced by ice particles in the atmosphere	693
10.5. Scattering and reflection of radiation from ice crystal clouds	700
10.5.1. Importance of the problem	700
10.5.2. Theoretical and experimental studies	701
10.6. Electrification of solid precipitation; thunderstorms and snowstorms	710
10.6.1. Electrical charges on snow particles	710
10.6.2. Charge separation in thunderstorms	711
10.6.3. Charging of snowstorms	718
10.7. Ice in astronomy	719
10.7.1. The interstellar medium	719
10.7.2. The solar system	720
10.7.2.1. Comets	720
10.7.2.2. Satellites and Saturn's rings	721
10.7.2.3. Venus	722
10.7.2.4. Mars	723
<b>APPENDIX A Miller-Bravais indices</b>	<b>725</b>
<b>APPENDIX B Dislocations in crystals</b>	<b>727</b>
<b>ADDENDUM: Some results from the international symposium on the Physics and Chemistry of Ice, held in Ottawa, August 1972.</b>	<b>730</b>
<b>BIBLIOGRAPHY AND AUTHOR INDEX</b>	<b>747</b>
<b>INDEX TO TABULATED AND GRAPHIC EXPERIMENTAL DATA</b>	<b>805</b>
<b>SUBJECT INDEX</b>	<b>809</b>
