

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	The Roots of Plasma Physics	2
1.2	The Plasma Environment of Our Earth	4
1.2.1	The Energy Source of Stars	4
1.2.2	The Active Sun	5
1.2.3	The Solar Wind	7
1.2.4	Earth's Magnetosphere and Ionosphere	9
1.3	Gas Discharges	12
1.3.1	Lighting	12
1.3.2	Plasma Displays	14
1.4	Dusty Plasmas	15
1.5	Controlled Nuclear Fusion	17
1.5.1	A Particle Accelerator Makes No Fusion Reactor	18
1.5.2	Magnetic Confinement in Tokamaks	19
1.5.3	Experiments with D-T Mixtures	19
1.5.4	The International Thermonuclear Experimental Reactor	20
1.5.5	Stellarators	22
1.5.6	Inertial Confinement Fusion	23
1.6	Challenges of Plasma Physics	24
1.7	Outline of the Book	25
<b>2</b>	<b>Definition of the Plasma State</b>	29
2.1	States of Matter	29
2.1.1	The Boltzmann Distribution	30
2.1.2	The Saha Equation	32
2.1.3	The Coupling Parameter	34
2.2	Collective Behavior of a Plasma	34
2.2.1	Debye Shielding	35
2.2.2	Quasineutrality	39
2.2.3	Response Time and Plasma Frequency	39

2.3	Existence Regimes . . . . .	40
2.3.1	Strong-Coupling Limit . . . . .	40
2.3.2	Quantum Effects . . . . .	42
	Problems . . . . .	43
<b>3</b>	<b>Single Particle Motion in Electric and Magnetic Fields . . . . .</b>	<b>45</b>
3.1	Motion in Static Electric and Magnetic Fields . . . . .	45
3.1.1	Basic Equations . . . . .	45
3.1.2	Cyclotron Frequencies . . . . .	46
3.1.3	The Earth Magnetic Field . . . . .	47
3.1.4	$E \times B$ Drift . . . . .	48
3.1.5	Gravitational Drift . . . . .	49
3.1.6	Application: Confinement of Nonneutral Plasmas . . . . .	50
3.2	The Drift Approximation . . . . .	51
3.2.1	The Concept of a Guiding Center . . . . .	51
3.2.2	Gradient Drift . . . . .	51
3.2.3	Curvature Drift . . . . .	53
3.2.4	The Toroidal Drift . . . . .	53
3.3	The Magnetic Mirror . . . . .	54
3.3.1	Longitudinal Gradient . . . . .	55
3.3.2	Magnetic Moment . . . . .	56
3.4	Adiabatic Invariants . . . . .	56
3.4.1	The Magnetic Moment as First Invariant . . . . .	57
3.4.2	The Mirror Effect . . . . .	57
3.4.3	The Longitudinal and the Flux Invariant . . . . .	59
3.5	Time-Varying Fields . . . . .	60
3.5.1	The Polarization Drift . . . . .	60
3.5.2	Time-Varying Magnetic field . . . . .	61
3.6	Toroidal Magnetic Confinement . . . . .	62
3.6.1	The Tokamak Principle . . . . .	63
3.6.2	The Stellarator Principle . . . . .	65
3.6.3	Rotational Transform . . . . .	65
3.7	Electron Motion in an Inhomogeneous Oscillating Electric Field . . . . .	67
3.7.1	The Ponderomotive Force . . . . .	67
	Problems . . . . .	69
<b>4</b>	<b>Stochastic Processes in a Plasma . . . . .</b>	<b>73</b>
4.1	The Velocity Distribution . . . . .	73
4.1.1	The Maxwell Velocity Distribution in One Dimension . . . . .	73
4.1.2	The Maxwell Distribution of Speeds . . . . .	75
4.1.3	Moments of the Distribution Function . . . . .	75
4.1.4	Distribution of Particle Energies . . . . .	76
4.2	Collisions . . . . .	77
4.2.1	Cross Section . . . . .	77
4.2.2	Mean Free Path and Collision Frequency . . . . .	78

4.2.3	Rate Coefficients .....	79
4.2.4	Inelastic Collisions .....	80
4.2.5	Coulomb Collisions .....	81
4.3	Transport .....	83
4.3.1	Mobility and Drift Velocity .....	83
4.3.2	Electrical Conductivity .....	84
4.3.3	Diffusion .....	85
4.3.4	Motion in Magnetic Fields in the Presence of Collisions ..	89
4.3.5	Application: Cross-Field Motion in a Hall Ion Thruster ..	92
4.4	Heat Balance of Plasmas .....	94
4.4.1	Electron Heating in a Gas Discharge .....	94
4.4.2	Ignition of a Fusion Reaction: The Lawson Criterion ..	96
4.4.3	Inertial Confinement Fusion .....	101
	Problems .....	105
<b>5</b>	<b>Fluid Models .....</b>	<b>107</b>
5.1	The Two-Fluid Model .....	108
5.1.1	Maxwell's Equations .....	108
5.1.2	The Concept of a Fluid Description .....	109
5.1.3	The Continuity Equation .....	110
5.1.4	Momentum Transport .....	111
5.1.5	Shear Flows .....	114
5.2	Magnetohydrostatics .....	115
5.2.1	Isobaric Surfaces .....	116
5.2.2	Magnetic Pressure .....	117
5.2.3	Diamagnetic Drift .....	119
5.3	Magnetohydrodynamics .....	120
5.3.1	The Generalized Ohm's Law .....	121
5.3.2	Diffusion of a Magnetic Field .....	121
5.3.3	The Frozen-in Magnetic Flux .....	123
5.3.4	The Pinch Effect .....	124
5.3.5	Application: Alfvén Waves .....	125
5.3.6	Application: The Parker Spiral .....	128
	Problems .....	130
<b>6</b>	<b>Plasma Waves .....</b>	<b>133</b>
6.1	Maxwell's Equations and the Wave Equation .....	133
6.1.1	Basic Concepts .....	134
6.1.2	Fourier Representation .....	135
6.1.3	Dielectric or Conducting Media .....	135
6.1.4	Phase Velocity .....	137
6.1.5	Wave Packet and Group Velocity .....	137
6.1.6	Refractive Index .....	139
6.2	The General Dispersion Relation .....	139

6.3	Waves in Unmagnetized Plasmas . . . . .	140
6.3.1	Electromagnetic Waves . . . . .	141
6.3.2	The Influence of Collisions . . . . .	143
6.4	Interferometry with Microwaves and Lasers . . . . .	144
6.4.1	Mach-Zehnder Interferometer . . . . .	145
6.4.2	Folded Michelson Interferometer . . . . .	148
6.4.3	The Second-Harmonic Interferometer . . . . .	149
6.4.4	Plasma-Filled Microwave Cavities . . . . .	150
6.5	Electrostatic Waves . . . . .	151
6.5.1	The Longitudinal Mode . . . . .	151
6.5.2	Bohm-Gross Waves . . . . .	152
6.5.3	Ion-Acoustic Waves . . . . .	153
6.6	Waves in Magnetized Plasmas . . . . .	156
6.6.1	The Dielectric Tensor . . . . .	156
6.6.2	Circularly Polarized Modes and the Faraday Effect . . . . .	158
6.6.3	Propagation Across the Magnetic Field . . . . .	162
6.7	Resonance Cones . . . . .	165
	Problems . . . . .	167
<b>7</b>	<b>Plasma Boundaries . . . . .</b>	<b>169</b>
7.1	The Space-Charge Sheath . . . . .	169
7.2	The Child-Langmuir Law . . . . .	170
7.3	The Bohm Criterion . . . . .	172
7.3.1	Stability Analysis . . . . .	173
7.3.2	The Bohm Criterion Imposed by the Sheath . . . . .	174
7.3.3	The Bohm Criterion as Seen from the Presheath . . . . .	175
7.4	The Plane Langmuir Probe . . . . .	176
7.4.1	The Ion Saturation Current . . . . .	179
7.4.2	The Electron Saturation Current . . . . .	179
7.4.3	The Electron Retardation Current . . . . .	180
7.4.4	The Floating Potential . . . . .	181
7.5	Advanced Langmuir Probe Methods . . . . .	182
7.5.1	The Druyvesteyn Method . . . . .	182
7.5.2	A Practical Realization of the Druyvesteyn Technique . . . . .	184
7.5.3	Double Probes . . . . .	185
7.5.4	Orbital Motion about Cylindrical and Spherical Probes . . . . .	186
7.6	Application: Ion Extraction From Plasmas . . . . .	188
7.7	Double Layers . . . . .	190
7.7.1	Langmuir's Strong Double Layer . . . . .	191
7.7.2	Experimental Evidence of Double Layers . . . . .	193
	Problems . . . . .	195
<b>8</b>	<b>Instabilities . . . . .</b>	<b>197</b>
8.1	Beam-Plasma Instability . . . . .	198
8.1.1	Non-Thermal Distribution Functions . . . . .	198

8.1.2	Dispersion of the Beam-Plasma Modes . . . . .	199
8.1.3	Growth Rate for a Weak Beam . . . . .	201
8.1.4	Why is the Slow Space-Charge Wave Unstable? . . . . .	202
8.1.5	Temporal or Spatial Growth . . . . .	205
8.2	Buneman Instability . . . . .	206
8.2.1	Dielectric Function . . . . .	206
8.2.2	Instability Analysis . . . . .	207
8.3	Beam Instability in Finite Systems . . . . .	208
8.3.1	Geometry of the Pierce Diode . . . . .	208
8.3.2	The Dispersion Relation for a Free Electron Beam . . . . .	209
8.3.3	The Influence of the Boundaries . . . . .	209
8.3.4	The Pierce Modes . . . . .	211
8.3.5	Discussion of the Pierce Model . . . . .	212
8.4	Macroscopic Instabilities . . . . .	214
8.4.1	Stable Magnetic Configurations . . . . .	214
8.4.2	Pinch Instabilities . . . . .	215
8.4.3	Rayleigh-Taylor Instability . . . . .	215
Problems	.....	218
<b>9</b>	<b>Kinetic Description of Plasmas . . . . .</b>	<b>219</b>
9.1	The Vlasov Model . . . . .	220
9.1.1	Heuristic Derivation of the Vlasov Equation . . . . .	220
9.1.2	The Vlasov Equation . . . . .	222
9.1.3	Properties of the Vlasov Equation . . . . .	223
9.1.4	Relation Between the Vlasov Equation and Fluid Models .	224
9.2	Application to Current Flow in Diodes . . . . .	225
9.2.1	Construction of the Distribution Function . . . . .	226
9.2.2	Virtual Cathode and Current Continuity . . . . .	229
9.2.3	Finding a Self-Consistent Solution . . . . .	229
9.2.4	Discussion of Numerical Solutions . . . . .	230
9.3	Kinetic Effects in Electrostatic Waves . . . . .	231
9.3.1	Electrostatic Electron Waves . . . . .	231
9.3.2	The Meaning of Cold, Warm and Hot Plasma . . . . .	233
9.3.3	Landau Damping . . . . .	235
9.3.4	Damping of Ion-Acoustic Waves . . . . .	237
9.3.5	A Physical Picture of Landau Damping . . . . .	239
9.3.6	Plasma Wave Echoes . . . . .	244
9.3.7	No Simple Route to Landau Damping . . . . .	246
9.4	Plasma Simulation with Particle Codes . . . . .	246
9.4.1	The Particle-in-Cell Algorithm . . . . .	247
9.4.2	Phase-Space Representation . . . . .	249
9.4.3	Instability Saturation by Trapping . . . . .	251
9.4.4	Current Flow in Bounded Plasmas . . . . .	252
Problems	.....	256

<b>10 Dusty Plasmas . . . . .</b>	<b>259</b>
10.1 Charging of Dust Particles . . . . .	260
10.1.1 Secondary Emission . . . . .	261
10.1.2 Photoemission . . . . .	262
10.1.3 Charge Collection . . . . .	266
10.1.4 Charging Time . . . . .	268
10.1.5 Charge Fluctuations . . . . .	270
10.1.6 Influence of Dust Density on Dust Charge . . . . .	272
10.2 Forces on Dust Particles . . . . .	276
10.2.1 Levitation and Confinement . . . . .	276
10.2.2 Neutral Drag Force . . . . .	283
10.2.3 Thermophoretic Force . . . . .	283
10.2.4 Ion Wind Forces . . . . .	284
10.2.5 Interparticle Forces . . . . .	291
10.3 Plasma Crystals . . . . .	294
10.3.1 Experimental Observations . . . . .	295
10.3.2 The Role of Ion Wakes . . . . .	296
10.3.3 Coulomb and Yukawa Balls . . . . .	298
10.3.4 A Simple Model for the Structure of Yukawa Balls . . . . .	300
10.4 Waves in Dusty Plasmas . . . . .	304
10.4.1 Compressional and Shear Waves in Monolayers . . . . .	304
10.4.2 Spectral Energy Density of Waves . . . . .	315
10.4.3 Dust Density Waves . . . . .	316
10.4.4 Concluding Remarks . . . . .	319
Problems . . . . .	320
<b>11 Plasma Generation . . . . .</b>	<b>323</b>
11.1 DC-Discharges . . . . .	323
11.1.1 Types of Low Pressure Discharges . . . . .	323
11.1.2 Regions in a Glow Discharge . . . . .	324
11.1.3 Processes in the Cathode Region . . . . .	325
11.1.4 The Hollow Cathode Effect . . . . .	329
11.1.5 Thermionic Emitters . . . . .	329
11.1.6 The Negative Glow . . . . .	330
11.1.7 The Positive Column . . . . .	331
11.1.8 Similarity Laws . . . . .	333
11.1.9 Discharge Modes of Thermionic Discharges . . . . .	334
11.2 Capacitive Radio-Frequency Discharges . . . . .	335
11.2.1 The Impedance of the Bulk Plasma . . . . .	336
11.2.2 Sheath Expansion . . . . .	337
11.2.3 Electron Energetics . . . . .	340
11.2.4 Self Bias . . . . .	341
11.2.5 Application: Anisotropic Etching of Silicon . . . . .	344

11.3	Inductively Coupled Plasmas .....	345
11.3.1	The Skin Effect .....	346
11.3.2	E and H-Mode .....	347
11.3.3	The Equivalent Circuit for an ICP .....	348
11.4	Concluding Remark .....	349
	Problems .....	350
	<b>Glossary</b> .....	351
	<b>Appendix: Constants and Formulas</b> .....	359
1	Physical Constants .....	359
2	List of Useful Formulas .....	360
2.1	Lengths .....	360
2.2	Frequencies .....	360
2.3	Velocities .....	361
3	Useful Mathematics .....	361
3.1	Vector Relations .....	361
3.2	Matrices and Tensors .....	363
3.3	The Theorems of Gauss and Stokes .....	364
	<b>Solutions</b> .....	365
	<b>References</b> .....	379
	<b>Name Index</b> .....	389
	<b>Subject Index</b> .....	391
