

## Volume II

<b>4</b>	<b>Stellar Structure and Evolution</b>	<b>539</b>
4.1	Stars and Star Clusters	539
4.1.1	General Properties of Main-sequence Stars	539
4.1.2	Stellar Atmospheres and Spectra	549
4.1.3	The Hertzsprung–Russell Diagram	552
4.1.4	Star Clusters	554
4.2	Thermonuclear Fusion in Stars	557
4.2.1	The Physics of Nuclear Fusion	559
4.2.2	Cross-section and Reaction Rate	562
4.2.3	Barrier Penetration	565
4.2.4	Thermonuclear Fusion Rates	567
4.2.5	Hydrogen Burning	570
4.2.6	Solar Neutrinos	576
4.2.7	Helium Burning	587
4.2.8	Advanced Burning Stages	591
4.2.9	Neutrino Emission by Hot Stars	595
4.3	Heat Transfer in Stars	597
4.3.1	Heat Transfer by Random Motion	597
4.3.2	Sources of Radiative Opacity	601
4.3.3	Heat Transfer by Convection	603
4.4	Stellar Structure	606
4.4.1	The Clayton Model	606
4.4.2	The Polytropic Model	610
4.4.3	White Dwarfs	616
4.4.4	Cooling of White Dwarfs	621
4.5	Stellar Evolution Beyond the Main Sequence	624
4.5.1	Evolution of $1M_{\odot}$ Stars	625
4.5.2	Evolution of $5M_{\odot}$ Stars	628
4.5.3	Evolution of $25M_{\odot}$ Stars	631
4.5.4	Core Collapse and Supernova Explosion	633
4.5.5	Supernova 1987A	638
4.5.6	Neutron Stars	643
	Bibliography	653
<b>5</b>	<b>Astrophysical Implications of General Relativity</b>	<b>655</b>
5.1	Experimental Tests of General Relativity	655
5.2	The Schwarzschild Metric	661
5.2.1	Birkhoff's Theorem	665
5.2.2	The Schwarzschild Solution	666
5.3	Perihelion Advance	667

5.4	Deflection of Light in Weak Fields	673
5.5	Radar Echo Delay	675
5.6	The Eötvös Experiment	677
5.7	Spin Precession in a Gravitational Field	681
5.7.1	*Fermi–Walker Transport	684
5.7.2	*Geodetic Precession	685
5.8	Field Equations for Stellar Structure	689
5.8.1	Buchdahl's Theorem	692
5.9	Black Holes and Gravitational Collapse	694
5.9.1	Evolution of the Black Hole Idea	694
5.9.2	Schwarzschild Black Holes	696
5.9.3	Eddington–Finkelstein Coordinates	699
5.9.4	Gravitational Collapse	702
5.9.5	Geodesic Motion and Black Hole Accretion	703
5.9.6	Rotating (Kerr) Black Holes	706
5.9.7	Kerr Horizons and Ergosphere	709
5.9.8	Dragging of Inertial Frames	711
5.9.9	Thermodynamics of Black Holes	714
5.9.10	Hawking Radiation	718
5.9.11	Observational Evidence for Black Holes	720
5.9.12	Cygnus X-1	724
5.9.13	Supermassive Black Holes in Galactic Nuclei	727
5.10	Gravitational Radiation	731
5.10.1	The Linearized Theory of Gravity	735
5.10.2	Gauge Freedom in General Relativity	740
5.10.3	Plane-wave Solutions	742
5.10.4	The Effect of Gravitational Waves on Free Particles	747
5.10.5	The Energy–Momentum Pseudotensor	751
5.10.6	Emission of Gravitational Radiation	756
5.10.7	Radiation from a Binary Star System	762
5.10.8	The Binary Pulsar PSR 1913+16	769
5.10.9	Gravitational Waves from Collisions	779
5.10.10	Gravitational Waves from Spinning Masses	782
5.10.11	Sources and Detectors of Gravitational Waves	784
5.11	The Post-Newtonian Approximation	800
5.11.1	Field Equations in the PN Approximation	801
5.11.2	Gauge Conditions and Conservation Laws	809
5.11.3	Particles and Photons in a Post-Newtonian Field	810
5.11.4	Asymptotic Fields	812
5.11.5	Gravitomagnetism	815
5.11.6	* Orbiting Gyroscope in the PN Approximation	819
5.11.7	The Geodetic and Lense–Thirring Effects	822

5.12	* Symmetries (Isometries) of a Metric	825
5.12.1	Killing Vectors and the Lie Derivative	826
5.12.2	Stationary and Static Metrics	832
5.12.3	Maximally Symmetric Spaces	835
5.12.4	Gaussian Curvature and Theorema Egregium	839
5.13	* The Weyl Conformal Tensor	842
	Bibliography	846

**A Physical Units and Maxwell's Electrodynamics 849**

A.1	The Natural System of Units	850
A.2	Units in Electromagnetic Theory	851
A.3	Miscellaneous Units	854
A.4	Maxwell's Equations	856
A.5	The Lorentz Force	862
A.6	The Electromagnetic Field Tensor	863
A.7	Covariance of Maxwell's Theory	868
A.8	Gauge Invariance of Electrodynamics	871
A.9	The Angular Momentum of Light	874
A.10	The Electromagnetic Stress Tensor	878
A.11	Poynting's Theorem	881
A.12	Plane Electromagnetic Waves	884
A.13	The Electromagnetic Stress–Energy–Momentum Tensor	887
A.14	Invariants of the Electromagnetic Field	891
A.15	Electromagnetic Energy–Momentum Four-Vector	893
A.16	Compton Scattering	897
A.17	Lagrangian Field Theory	900
A.18	Symmetries and Conservation Laws in Electrodynamics	906
A.19	Covariant Form of Integral Conservation Laws	910
A.20	Liénard–Wiechert Potentials	916
A.21	Electromagnetic Fields of a Point Charge	919
A.22	Radiation by Moving Charges	922
A.22.1	The velocity and acceleration are parallel ( $\beta \parallel \dot{\beta}$ )	923
A.22.2	The acceleration is perpendicular to the velocity ( $\beta \perp \dot{\beta}$ )	924
A.23	Relativistic Generalization of Larmor's Formula	925
A.24	Synchrotron Radiation	929
A.25	Astronomical Sources of Synchrotron Radiation	934
A.26	Inverse Compton Scattering	938
A.27	Green's Functions and Retarded Potentials	942
A.28	Radiation from a Localized Source	945
A.29	Pulsar Spin-down	950
	Bibliography	952

<b>B</b>	<b>Fundamentals of Elementary Particle Physics</b>	<b>953</b>
B.1	The Standard Model	953
B.2	Electromagnetic Interactions	960
B.3	Strong Interactions	967
B.4	Weak Interactions	970
B.5	The Electroweak Connection	974
B.6	The Dirac Equation and its Implications	981
B.7	Gauge Field Theory	1008
	Bibliography	1022
<b>C</b>	<b>Elements of Statistical Mechanics and Thermodynamics</b>	<b>1023</b>
C.1	The Boltzmann Distribution	1023
C.2	Blackbody Radiation	1027
C.3	The Bose–Einstein and Fermi–Dirac Distributions	1032
C.4	Ideal Gas Law and Maxwell’s Velocity Distribution	1037
C.5	Conservation of Entropy	1040
C.6	The Physical Meaning of Entropy	1042
C.7	The First and Second Laws of Thermodynamics	1044
C.8	The Chemical Potential	1045
C.9	Heat Capacity	1047
C.10	Adiabatic Expansion	1047
C.11	Degenerate Fermion Systems	1049
C.12	Ideal Electron Gas at Zero Temperature	1053
	Bibliography	1055
<b>D</b>	<b>The Saha Equation</b>	<b>1057</b>
<b>E</b>	<b>Nuclear Statistical Equilibrium</b>	<b>1059</b>
<b>F</b>	<b>Liouville’s Theorem and the Boltzmann Equation</b>	<b>1061</b>
<b>G</b>	<b>Selected Integrals in Statistical Physics</b>	<b>1063</b>
<b>H</b>	<b>Newtonian Gravity</b>	<b>1071</b>
<b>Index</b>		<b>1083</b>

Sections indicated by an asterisk (\*) lie somewhat out of the main line of presentation, and may be omitted in a first reading.
