List of Figures	ix
List of Tables	xxiii
Foreword	xxv
Acknowledgments	xxix
Introduction	xxxi
1. KINETIC THEORY OF DILUTE GASES	1
1 Introduction	1
2 Derivation of the Boltzmann equation	3
3 General properties of the Boltzmann equation. <i>H</i> -theorem	12
4 Chapman–Enskog expansion	18
5 Boltzmann equation for gas mixtures	29
6 Kinetic models for a single gas	33
7 Kinetic models for gas mixtures	40
2. SOLUTION OF THE BOLTZMANN EQUATION FOR UNIFORM SHEAR FLOW	55
1 Introduction	55
2 The Boltzmann equation for uniform shear flow	57
3 Moment equations for a gas of Maxwell molecules. Rheological properties	61
4 Third- and fourth-degree velocity moments	71
5 Singular behavior of the velocity moments	79
6 Perturbation expansion of the distribution function	86
7 Nonequilibrium entropy	89

3.	KINETIC MODEL FOR UNIFORM SHEAR FLOW	95
1	Introduction	95
2	The BGK equation for uniform shear flow. Maxwell molecules	96
3	Power-law repulsive potentials. Hard spheres	107
3.1	Velocity distribution function	107
3.2	Rheological properties	110
4	The thermostatted state	117
5	Nonequilibrium entropy of the thermostatted state	126
6	Small perturbations from the thermostatted state	133
7	Heat transport under uniform shear flow	139
7.1	Boltzmann description for Maxwell molecules	140
7.2	BGK description for general interactions	144
7.3	Heat flux induced by an external force	148
8	Stability of the uniform shear flow	149
8.1	Theoretical analysis	149
8.2	Monte Carlo simulations	153
4.	UNIFORM SHEAR FLOW IN A MIXTURE	165
1	Introduction	165
2	Maxwell molecules	166
2.1	Transient regime	168
2.2	Rheological properties	174
3	General repulsive interactions	178
3.1	Rheological properties	180
3.2	Velocity distribution functions	188
4	Nonequilibrium phase transition in the tracer limit	193
5	Generalized diffusion and Dufour coefficients	202
5.1	Diffusion tensor	206
5.2	Dufour tensor	209
5.	PLANAR COUETTE FLOW IN A SINGLE GAS	213
1	Introduction	213
2	Hydrodynamic description	215
3	The Boltzmann equation for the planar Couette flow	222
4	BGK kinetic model description	231
4.1	Generalized transport coefficients	232
4.2	Velocity distribution function	242
5	Nonequilibrium entropy of the Couette flow	246

<i>Contents</i>	vii
6 Other kinetic theories	248
7 Comparison with computer simulations	254
6. PLANAR COUETTE FLOW IN A MIXTURE	271
1 Introduction	271
2 Kinetic model description for a mixture	272
3 Application to the case of a binary mixture	280
4 Diffusion and mobility in the tracer limit.	289
Appendices	298
List of symbols	299
References	305
Index	315
