## Part I Collision Theory

<b>1 Potential Scattering</b> .....	3
1.1 Scattering by a Short-Range Potential .....	4
1.2 Scattering by a Coulomb Potential .....	10
1.3 Analytic Properties of the <i>S</i> -Matrix .....	16
1.4 Effective Range Theory .....	23
1.4.1 Short-Range Potentials .....	23
1.4.2 Long-Range Potentials .....	29
1.4.3 Coulomb Potential .....	35
1.5 Variational Principles .....	41
1.6 Relativistic Scattering: The Dirac Equation .....	45
<b>2 Multichannel Collision Theory</b> .....	57
2.1 Wave Equation and Cross Section .....	58
2.2 Target Eigenstates and Pseudostates .....	60
2.2.1 Target Eigenstates .....	60
2.2.2 Target Pseudostates .....	64
2.3 Close Coupling Equations .....	69
2.3.1 Foundations of the Method .....	69
2.3.2 Derivation of the Close Coupling Equations .....	74
2.4 <i>K</i> -Matrix and Kohn Variational Principle .....	84
2.5 <i>S</i> -Matrix, <i>T</i> -Matrix and Cross Sections .....	91
<b>3 Resonances and Threshold Behaviour</b> .....	101
3.1 Analytic Properties of the <i>S</i> -Matrix .....	102
3.2 Bound States and Resonances .....	109
3.2.1 Bound-State and Resonance Poles in the <i>S</i> -Matrix .....	110
3.2.2 Behaviour of the <i>S</i> -Matrix Near a Resonance .....	112
3.2.3 Behaviour of Eigenphases Near a Resonance .....	117
3.2.4 Time-Delay Matrix .....	121

	3.2.5 Feshbach Projection Operator Theory .....	125
	3.2.6 Hyperspherical Coordinates .....	129
3.3	Threshold Behaviour of Cross Sections .....	135
	3.3.1 Excitation: Short-Range Potentials.....	135
	3.3.2 Excitation: Dipole Potentials.....	139
	3.3.3 Excitation: Coulomb Potential .....	145
	3.3.4 Multichannel Quantum Defect Theory.....	151
	3.3.5 Threshold Behaviour of Ionization .....	159
<b>Part II R-Matrix Theory and Applications</b>		
4	<b>Introduction to R-Matrix Theory: Potential Scattering.....</b>	167
4.1	Wigner–Eisenbud Theory .....	170
4.2	Generalized R-Matrix Theory .....	175
4.3	Variational Principles for the R-Matrix .....	179
4.4	R-Matrix Approximation Methods .....	181
	4.4.1 Homogeneous Boundary Condition Method .....	181
	4.4.2 Buttle Corrections to the R-Matrix and Wave Function .....	184
	4.4.3 Arbitrary Boundary Condition Methods .....	187
	4.4.4 Linear Equations Method .....	191
	4.4.5 Eigenchannel Methods .....	192
	4.4.6 Lagrange Mesh Methods .....	197
	4.4.7 B-Spline Methods .....	201
	4.4.8 Direct Calculation of Siegert State Parameters .....	207
4.5	Propagator Methods .....	209
	4.5.1 Light–Walker Propagator .....	210
	4.5.2 BBM Propagator .....	213
4.6	Dirac R-Matrix Theory .....	215
5	<b>Electron Collisions with Atoms and Ions .....</b>	227
5.1	Multichannel R-Matrix Theory .....	228
	5.1.1 Introduction and Computer Programs .....	229
	5.1.2 Internal Region Solution .....	232
	5.1.3 External Region Solution .....	238
	5.1.4 Asymptotic Region Solution .....	240
5.2	Variational Principle for the R-Matrix .....	242
5.3	Continuum Basis Orbitals and Correction Methods .....	247
	5.3.1 Homogeneous Boundary Condition Method .....	248
	5.3.2 Buttle Correction to the R-Matrix and Wave Function .....	250
	5.3.3 Arbitrary Boundary Condition Methods .....	254
	5.3.4 Partitioned R-Matrix Method .....	256
5.4	Inclusion of Relativistic Effects .....	260
	5.4.1 Transformation of the K- and S-Matrices .....	261
	5.4.2 Breit–Pauli Hamiltonian .....	265
	5.4.3 Frame-Transformation Theory .....	272

5.5	Dirac R-Matrix Theory .....	275
	5.5.1 Introduction and Computer Programs .....	276
	5.5.2 Internal Region Solution .....	277
	5.5.3 External Region Solution .....	284
	5.5.4 Asymptotic Region Solution .....	287
	5.5.5 Continuum Basis Orbitals .....	289
	5.5.6 Buttle Correction .....	291
5.6	Low-Energy Electron Collision Calculations .....	292
	5.6.1 Electron Collisions with H .....	292
	5.6.2 Electron Collisions with He .....	294
	5.6.3 Electron Collisions with Ne .....	298
	5.6.4 Electron Collisions with Si III .....	299
	5.6.5 Electron Collisions with Fe II .....	301
	5.6.6 Electron Collisions with Fe XV .....	307
	5.6.7 Electron Collisions with Xe XXVII .....	309
6	<b>Intermediate-Energy Collisions .....</b>	311
6.1	Overview of Intermediate-Energy Methods .....	312
6.2	R-Matrix with Pseudostates Method .....	316
6.3	Intermediate-Energy R-Matrix Method .....	322
	6.3.1 General Procedure .....	323
	6.3.2 Two-Electron Example .....	327
6.4	T-Matrix Energy Averaging .....	337
6.5	Distorted Wave and Second-Born Methods .....	343
6.6	Intermediate-Energy Electron Collision Calculations .....	348
	6.6.1 Electron Collisions with H .....	348
	6.6.2 Electron Collisions with C IV .....	351
	6.6.3 Electron Impact Excitation–Ionization of He .....	352
7	<b>Positron Collisions with Atoms and Ions .....</b>	355
7.1	Multichannel R-Matrix Theory .....	356
	7.1.1 Introduction .....	356
	7.1.2 Internal Region Solution .....	360
	7.1.3 External Region Solution .....	367
	7.1.4 Asymptotic Region Solution .....	370
7.2	Positron and Positronium Collision Calculations .....	373
	7.2.1 Positron Collisions with H .....	373
	7.2.2 Positronium Collisions with He .....	375
	7.2.3 Target Polarization in Positronium Collisions .....	377
8	<b>Photoionization, Photorecombination and Atoms in Fields .....</b>	379
8.1	Atomic Photoionization .....	380
	8.1.1 Introduction and General Theory .....	380
	8.1.2 R-Matrix Theory .....	390

8.2	Photorecombination and Radiation Damping . . . . .	404
8.2.1	Introduction . . . . .	404
8.2.2	<i>R</i> -Matrix Theory . . . . .	406
8.3	The Opacity Project . . . . .	414
8.4	Spectra of Atoms in Fields . . . . .	416
8.5	Illustrative Examples . . . . .	422
8.5.1	Photoionization of Li . . . . .	423
8.5.2	Photoionization of Fe VII . . . . .	424
8.5.3	Photorecombination in Electron Collisions with O VIII . . . . .	426
8.5.4	Radiation Damping in Electron Collisions with Fe XXVI . . . . .	428
8.5.5	Radiation Damping in Electron Collisions with W XLVII . . . . .	428
8.5.6	Photoionization Spectrum of Li in a Magnetic Field . . . . .	431
<b>9</b>	<b>Multiphoton Processes: Floquet Theory . . . . .</b>	<b>433</b>
9.1	<i>R</i> -Matrix–Floquet Theory . . . . .	434
9.1.1	Introduction . . . . .	434
9.1.2	Internal Region Solution . . . . .	436
9.1.3	External Region Solution . . . . .	441
9.1.4	Asymptotic Region Solution in the Velocity Gauge . . . . .	451
9.1.5	Asymptotic Region Solution in the Acceleration Frame . . . . .	456
9.1.6	Asymptotic Region Solution: Simplified Analysis . . . . .	466
9.1.7	Harmonic Generation . . . . .	473
9.1.8	Non-hermitian Floquet Dynamics . . . . .	477
9.2	Illustrative Examples . . . . .	480
9.2.1	Resonances in Multiphoton Ionization . . . . .	480
9.2.2	Harmonic Generation . . . . .	484
9.2.3	Laser-Induced Degenerate States . . . . .	487
9.2.4	Laser-Assisted Electron–Atom Collisions . . . . .	489
<b>10</b>	<b>Multiphoton Processes: Time-Dependent Theory . . . . .</b>	<b>493</b>
10.1	Time-Dependent <i>R</i> -Matrix Theory . . . . .	494
10.1.1	Introduction . . . . .	494
10.1.2	Internal Region Solution . . . . .	499
10.1.3	External Region Solution . . . . .	506
10.1.4	Computational Methods . . . . .	511
10.1.5	Analysis of Applications . . . . .	516
10.2	Illustrative Examples . . . . .	523
10.2.1	Multiphoton Ionization of Ne . . . . .	524
10.2.2	Multiphoton Ionization of Ar . . . . .	528

<b>11</b>	<b>Collisions with Molecules . . . . .</b>	<b>533</b>
11.1	Electron Collisions with Molecules . . . . .	535
11.1.1	Introduction . . . . .	535
11.1.2	Fixed-Nuclei <i>R</i> -Matrix Theory . . . . .	536
11.1.3	Inclusion of Nuclear Motion . . . . .	544
11.1.4	Non-adiabatic <i>R</i> -Matrix Theory . . . . .	548
11.1.5	Resonant <i>R</i> -Matrix Theory . . . . .	560
11.1.6	Scattering Amplitudes and Cross Sections . . . . .	561
11.1.7	Illustrative Examples: N <sub>2</sub> , O <sub>2</sub> , N <sub>2</sub> O, H <sub>3</sub> <sup>+</sup> . . . . .	566
11.2	Positron Collisions with Molecules . . . . .	573
11.2.1	<i>R</i> -Matrix Theory and Calculations . . . . .	573
11.2.2	Illustrative Examples: H <sub>2</sub> O, CO <sub>2</sub> . . . . .	575
11.3	Molecular Multiphoton Processes . . . . .	579
11.3.1	Molecular <i>R</i> -Matrix–Floquet Theory . . . . .	579
11.3.2	Illustrative Example: H <sub>2</sub> . . . . .	588

<b>12</b>	<b>Electron Interactions in Solids . . . . .</b>	<b>591</b>
12.1	Electron Collisions with Transition Metal Oxides . . . . .	592
12.1.1	Introduction . . . . .	592
12.1.2	<i>R</i> -Matrix Theory . . . . .	592
12.1.3	Illustrative Example . . . . .	594
12.2	Electron Transport in Semiconductor Devices . . . . .	596
12.2.1	Introduction . . . . .	596
12.2.2	<i>R</i> -Matrix Theory . . . . .	597
12.2.3	Illustrative Example . . . . .	602

### Part III Appendices

<b>Appendix A</b>	<b>Clebsch–Gordan and Racah Coefficients . . . . .</b>	<b>607</b>
A.1	Clebsch–Gordan Coefficients . . . . .	607
A.2	Racah Coefficients . . . . .	612
A.3	6- <i>j</i> Symbols . . . . .	615
A.4	9- <i>j</i> Symbols . . . . .	615
A.5	Higher Order 3 <i>n</i> - <i>j</i> Symbols . . . . .	617

<b>Appendix B</b>	<b>Legendre Polynomials and Related Functions . . . . .</b>	<b>619</b>
B.1	Legendre Polynomials . . . . .	619
B.2	Associated Legendre Functions . . . . .	621
B.3	Spherical Harmonics . . . . .	623
B.4	Phase of Spherical Harmonics . . . . .	628
B.5	Transformation Under Rotations . . . . .	632

<b>Appendix C Bessel Functions and Related Functions . . . . .</b>	639
C.1 Bessel Functions . . . . .	639
C.2 Spherical Bessel Functions . . . . .	642
<b>Appendix D Applications of Angular Momentum Algebra . . . . .</b>	647
D.1 Long-Range Electron–Atom Potential Coefficients . . . . .	647
D.1.1 Non-relativistic Collisions . . . . .	647
D.1.2 Inclusion of Relativistic Effects . . . . .	652
D.2 <i>R</i> -Matrix–Floquet Multiphoton Potential . . . . .	654
D.3 Time-Dependent Multiphoton Potential . . . . .	657
D.4 Atomic Photoionization Cross Section . . . . .	662
<b>Appendix E Propagator Methods . . . . .</b>	665
E.1 Light–Walker Propagator Method . . . . .	666
E.2 Log-Derivative Propagator Method . . . . .	671
E.3 BBM Propagator Method . . . . .	675
E.4 Propagation of Driven Equations . . . . .	678
E.5 Propagator Method with First-Order Derivative . . . . .	681
E.6 Propagation of Sets of Uncoupled Channels . . . . .	684
<b>Appendix F Asymptotic Expansions . . . . .</b>	693
F.1 Electron and Positron Collisions . . . . .	693
F.2 Multiphoton Processes . . . . .	700
<b>References . . . . .</b>	707
<b>Index . . . . .</b>	731

## Units

Atomic units (a.u.) will be used throughout this monograph. They are such that  $\hbar = m = e = 1$ , where  $\hbar$  is Planck's constant  $h$  divided by  $2\pi$ ,  $m$  is the mass of the electron and  $-e$  is the charge of the electron. Thus the atomic unit of length  $a_0 = \hbar^2/me^2 \approx 5.292 \times 10^{-9}$  cm, which is the radius of the first Bohr orbit of the hydrogen atom with infinite nuclear mass. Using this unit of length, collision cross sections, which have the dimension of an area, are then expressed, either in units of  $a_0^2 \approx 2.800 \times 10^{-17}$  cm<sup>2</sup> or in units of  $\pi a_0^2 \approx 8.797 \times 10^{-17}$  cm<sup>2</sup>. The atomic unit of time is given by  $\hbar^3/me^4 = 2.419 \times 10^{-17}$  s, while the unit of velocity is  $e^2/\hbar = 2.188 \times 10^8$  cm s<sup>-1</sup>. The atomic unit of energy is  $e^2/a_0 \approx 27.21$  eV, which is twice the ionization energy of the hydrogen atom in its ground state and twice the Rydberg unit of energy. The fine-structure constant  $\alpha = e^2/\hbar c \approx 1/137$  is dimensionless, where  $c$  is the velocity of light in a vacuum.
