

Contents of Subvolume I/17A

General introduction (Y. ITIKAWA)	X
Motivations for and objectives of the present volume	X
Outline of the volume	XI

1 Photon interactions with atoms (JOHN W. COOPER)	1-1
1.1 Introduction	1-1
1.2 Total photoionization cross sections	1-2
1.2.1 Measurement techniques	1-2
1.2.2 Cross sections for atomic hydrogen	1-3
1.2.3 Cross sections for helium	1-5
1.2.4 Cross sections for neon ($Z = 10$)	1-8
1.2.5 Cross sections for argon ($Z = 18$)	1-14
1.2.6 Cross sections for krypton ($Z = 36$)	1-22
1.2.7 Cross sections for xenon ($Z = 54$)	1-29
1.2.8 Cross sections for atomic oxygen and nitrogen ($Z = 8, 7$)	1-39
1.2.9 Cross sections for the alkalis ($Z = 3, 11, 19, 37, 55$)	1-41
1.2.10 Cross sections for other elements	1-45
1.3 Cross sections due to resonances, branching ratios, multiple ionization and angular distributions	1-46
1.3.1 Cross sections due to resonances	1-47
1.3.2 Resonances in helium	1-47
1.3.3 Resonances between the two lowest ionization thresholds of the rare gases	1-49
1.3.4 ns and doubly excited resonances in neon, argon, krypton and xenon	1-51
1.3.5 Deep inner shell resonance regions	1-53
1.3.6 Resonance regions in oxygen and nitrogen	1-55
1.3.7 Resonances in the alkalis	1-56
1.3.8 Resonance regions in other elements	1-58
1.3.9 Branching ratios and angular distributions	1-59
1.3.9.1 The ratio of double to single ionization for helium	1-60
1.3.9.2 Branching ratios for light elements	1-61
1.3.9.3 Ionization plus excitation, partial subshell cross sections and angular distributions	1-64
1.4 Elastic and inelastic scattering	1-67
1.4.1 Relationship of cross sections to the index of refraction and scattering factors	1-67
1.4.2 Measurements of the index of refraction	1-69
1.4.3 Measurements of elastic scattering	1-70
Appendix: Alternative sources of data	1-75
References for 1	1-77

2	Electron collisions with atoms	2-1
2.1	Introduction (M. INOKUTI)	2-1
2.1.1	Generalities	2-1
2.1.2	Scope and policy of the present treatment	2-2
2.1.3	Methods for the determination of cross sections	2-3
2.1.4	Data sources and data centers	2-4
2.2	Total scattering cross sections (M. INOKUTI)	2-4
2.2.1	Generalities	2-4
2.2.2	Individual atoms	2-5
2.2.2.1	Hydrogen	2-5
2.2.2.2	Helium	2-7
2.2.2.3	Lithium	2-8
2.2.2.4	Oxygen	2-9
2.2.2.5	Neon	2-10
2.2.2.6	Sodium	2-11
2.2.2.7	Argon	2-11
2.2.2.8	Krypton	2-12
2.2.2.9	Xenon	2-13
2.2.2.10	Mercury	2-14
2.2.3	Additional remarks	2-14
2.3	Elastic scattering cross section (M. INOKUTI)	2-15
2.3.1	Generalities	2-15
2.3.2	Individual atoms	2-16
2.3.2.1	Hydrogen	2-16
2.3.2.2	Helium	2-16
2.3.2.3	Lithium	2-16
2.3.2.4	Oxygen	2-16
2.3.2.5	Neon	2-16
2.3.2.6	Sodium	2-16
2.3.2.7	Argon	2-16
2.3.2.8	Krypton	2-17
2.3.2.9	Xenon	2-17
2.3.2.10	Mercury	2-17
2.3.3	Additional remarks	2-17
2.4	Excitation (M. INOKUTI)	2-18
2.4.1	Generalities	2-18
2.4.1.1	Dipole allowed and forbidden transitions	2-18
2.4.1.2	Collision strength	2-19
2.4.1.3	Resonance	2-20
2.4.1.4	Threshold behavior	2-20
2.4.1.5	Relation to the ionization cross section	2-20
2.4.1.6	Photo-emission cross section	2-21
2.4.2	Individual atoms	2-21
2.4.2.1	Hydrogen	2-21
2.4.2.2	Helium	2-24
2.4.2.3	Lithium	2-26
2.4.2.4	Other atoms	2-28
	References for 2.1 to 2.4	2-29

2.5	Momentum transfer cross sections (M.T. ELFORD, S.J. BUCKMAN)	2-35
2.5.1	Introduction	2-35
2.5.1.1	Definition in terms of the differential cross section	2-35
2.5.1.2	Definition in terms of the scattering phase shifts	2-36
2.5.2	Experimental determinations	2-37
2.5.2.1	Swarm experiments	2-37
2.5.2.2	Crossed beam and attenuation experiments	2-37
	References for 2.5.1 and 2.5.2	2-38
2.5.3	Determination of preferred cross sections	2-38
2.5.4	Units	2-38
2.5.5	The elements	2-39
2.5.5.1	Hydrogen	2-39
2.5.5.2	Helium	2-40
2.5.5.3	Lithium	2-42
2.5.5.4	Oxygen	2-42
2.5.5.5	Neon	2-43
2.5.5.6	Sodium	2-44
2.5.5.7	Magnesium	2-45
2.5.5.8	Argon	2-45
2.5.5.9	Potassium	2-47
2.5.5.10	Manganese	2-48
2.5.5.11	Copper	2-48
2.5.5.12	Zinc	2-48
2.5.5.13	Krypton	2-49
2.5.5.14	Xenon	2-51
2.5.5.15	Cesium	2-53
2.5.5.16	Barium	2-53
2.5.5.17	Mercury	2-54
2.6	Ionization (H. TAWARA)	2-56
2.6.1	Introduction and general description	2-56
2.6.2	Experimental techniques for neutral atom targets	2-58
2.6.2.1	Orthodox method	2-58
2.6.2.2	Magneto-optically trapped targets	2-58
2.6.2.3	Excited species targets	2-58
2.6.3	Contribution of various processes to ionization	2-59
2.6.3.1	Direct processes	2-60
2.6.3.2	Indirect processes	2-61
2.6.4	Recommended ionization cross sections for neutral atoms	2-61
2.6.4.1	General features of the ionization cross section behavior	2-61
2.6.4.2	Innershell electron ionization	2-64
2.6.5	Short description of theories	2-77
2.6.6	Empirical formula for ionization cross sections for outer-shell electrons	2-77
2.6.6.1	Empirical formulas for single ionization	2-77
2.6.6.2	Analytical and empirical formula for ionization of inner-shell electrons	2-78
2.6.6.3	Empirical formula for multiple ionization of neutral atoms	2-79
2.6.6.4	Ionization rate coefficients	2-80
2.6.7	References for 2.6	2-81
