

Contents

1. Introduction	1
<hr/>	
Part I Basic Theory	
<hr/>	
2. Basic Properties of Plasma	6
2.1 Plasma Condition	6
2.2 Ideal Plasma	7
2.3 Individual Motion and Collective Motion	10
2.4 Types of Plasmas	11
Problems	13
3. Individual Particle Motion	14
3.1 General Relations	14
3.2 Cyclotron Motion	15
3.2.1 Guiding Center	17
3.2.2 Adiabatic Invariant	17
3.2.3 Magnetic Moment	18
3.2.4 Magnetic Mirror	18
3.2.5 Magnetic Mirror Trap	18
3.2.6 Pitch Angle	19
3.2.7 Longitudinal Invariant	19
3.3 Drift Across a Magnetic Field	19
3.3.1 Drift Velocity	19
3.3.2 $\mathbf{E} \times \mathbf{B}$ Drift	20
3.3.3 Curvature Drift	21
3.3.4 Gradient B Drift	22
3.4 Motion in an Oscillating Electric Field	24
3.4.1 Polarization Drift	23
3.4.2 Magnetic Field Effect	23
3.4.3 Cyclotron Resonance	24
3.4.4 Ponderomotive Force	24
3.4.5 Magnetic Field Effect	25
3.5 Coulomb Collisions	26
3.5.1 Differential Cross Section	27
3.5.2 Cumulative Small-Angle Scattering	28

3.5.3	Coulomb Logarithm	30	6.6.1	Bounce Frequency	99
3.5.4	Collision Frequencies and Relaxation Times	30	6.6.2	Bernstein-Greene-Kruskal (BGK) Waves	100
3.5.5	Effective Collision Frequency	34	6.6.3	Quasilinear Effects	102
3.6	Relativistic Effects	35	6.7	Source and Noise Level	105
Problems	55	6.8	Collision Integral	108
4. Formulation of Plasma Theory	39	Problems	114
4.1	The Γ -Space Description (Klimontovich System of Equations)	40	7. General Theory of Linear Waves	116
4.2	The μ -Space Description (Boltzmann-Vlasov System of Equations)	42	7.1	Source and Response	116
4.3	Drift Kinetic Theory	44	7.2	Dielectric Tensor and the Dispersion Relation in a Uniform Plasma	118
4.4	Two-Fluids Theory	47	7.3	Cold Plasma Model	122
4.5	Resistive Magnetohydrodynamics (MHD)	52	7.3.1	Unmagnetized Plasma	124
Problems	55	7.3.2	Parallel Propagation	125
5. Electrostatic Response	56	7.3.3	Perpendicular Propagation	126
5.1	Debye Shielding	57	7.3.4	Oblique Propagation	128
5.1.1	Debye Potential	57	7.4	Wave Energy and Momentum	128
5.1.2	Physical Picture of Debye Shielding	58	7.4.1	Wave Energy Equation	128
5.2	Electron Plasma Oscillation	59	7.4.2	Wave Momentum	132
5.3	Two-beam Instability	62	7.4.3	Action	133
5.4	Ion Acoustic Waves	65	7.4.4	Non-uniformity Effect	133
5.5	Drift Waves	68	Problems	134
5.5.1	Diamagnetic Current	68	8. Parametric Excitation and Mode Coupling	136
5.5.2	Diamagnetic Drift Velocity in the Slab Model	69	8.1	Mathieu Equation Model	136
5.5.3	Drift Waves in the Slab Model	70	8.1.1	The Case of $\omega_0 \simeq 2\Omega_0$	137
5.5.4	Properties of the Drift Wave	73	8.1.2	The Case of $\omega_0 \simeq \Omega_0$	138
5.6	Nonlinear Waves	74	8.1.3	Effect of Damping	140
5.6.1	K-dV Equation for Ion Acoustic Waves	74	8.2	Coupled-Mode Parametric Excitation	140
5.6.2	Nonlinear Electron Plasma Waves	76	8.2.1	Dispersion Relation	141
Problems	79	8.2.2	Uniform or Dipole Pump: $k_0 = 0$	143
6. Kinetic Theory	82	8.2.3	Stimulated Scattering	144
6.1	Linearized Vlasov Equation	82	8.3	Coupled Electron Plasma Wave and Ion Acoustic Wave Parametric Excitation	145
6.2	Linear Electrostatic Response in Isotropic Plasma	83	8.3.1	Electromagnetic Pump	145
6.3	Landau Damping	87	8.3.2	Stimulated Scattering	149
6.3.1	Resonant Particles and Nonresonant Particles	87	8.4	Nonlinear Wave-Particle Interaction – Nonlinear Landau Damping of an Electron Plasma Wave	150
6.3.2	Effect of Resonant Particles on Electric Susceptibility	88	8.5	Condensation and Collapse of Langmuir Waves	151
6.3.3	Mathematical Formulation of Landau Damping	90	Problems	153
6.3.4	Physical Mechanism	92			
6.3.5	Kinetic Instabilities	92			
6.4	Electrostatic Response in Magnetized Plasma	93			
6.5	Collisionless Drift Wave Instability	97			
6.6	Trapped Particle Effects and Quasilinear Effects	99			

Part II Applications to Fusion Plasmas

9. Plasma Confinement for Fusion	156
9.1 Principle of Thermonuclear Fusion	156
9.1.1 D-D Reaction	156
9.1.2 D-T Reaction	158
9.1.3 Ignition Condition	159
9.1.4 Lawson Criterion	160
9.2 Magnetic Confinement and Heating of Plasmas	162
9.2.1 Open-End Confinement	162
9.2.2 Toroidal Confinement	164
9.2.3 Tokamak	165
9.2.4 Reversed Field Pinch and Spheromak	166
9.2.5 Helical System (Stellarator/Heliotron)	168
9.3 Inertial Confinement and Compression of Plasma	170
10. Ideal Magnetohydrodynamics	173
10.1 Basic Equations	173
10.2 MHD Equilibrium	178
10.3 Interchange Instability	186
10.4 Rayleigh-Taylor Instability	194
10.5 Current Driven Instability (I)	197
10.6 MHD Waves	200
Problems	204
11. Resistive Magnetohydrodynamics	205
11.1 Reduced MHD Equations	205
11.1.1 Slab Geometry	205
11.1.2 Toroidal Geometry	207
11.2 Tearing Mode Instability and Magnetic Islands	211
11.3 Current Driven Instability (II)	216
11.4 Ballooning Instability	219
11.5 Resistive Interchange and Rippling Modes	222
11.6 Disruptive Instability	226
11.7 Driven Magnetic Reconnection	231
11.8 Self-Organization	234
Problems	239
12. Wave-Plasma Interactions	240
12.1 Waves in Non-uniform Plasma	240
12.1.1 The Eikonal Approximation	240
12.1.2 The Local Dispersion Relation	241
12.1.3 Geometrical Optics	241
12.1.4 The Eigenvalue Problem	241
12.1.5 Absolute vs Convective Instabilities	244
12.2 Accessibility of Waves in Magnetized Plasmas	244
12.3 RF Control of Magnetized Plasmas	251
12.4 Laser-Plasma Interaction	253
Problems	255
13. Transport Processes	256
13.1 General Properties of Collisional Transport	256
13.2 Neoclassical Transport in Axisymmetric Toroidal Configurations	260
13.3 Neoclassical Transport in Nonaxisymmetric Magnetic Confinement	266
13.4 Convective Cell and Associated Transport	271
13.5 Drift Wave Turbulence and Associated Transport	274
13.6 MHD Turbulence and Associated Transport	278
Problems	280
14. Progress in Fusion Research	282
14.1 A Brief History of Tokamak Research	282
14.2 Progress in Other Magnetic Confinement Research	288
14.3 Progress in Inertial Confinement Research	294
14.4 Plasma Physics Toward Fusion Reactors	296
A. Appendix	303
A.1 Problems to Part I Basic Theory	303
A.2 Problems to Part II Applications to Fusion Plasmas	314
References	327
Subject Index	337
