

# Contents

<b>Preface</b>	<b>xv</b>
<b>1 The Nature of Plasma</b>	<b>1</b>
1.1 Plasma and plasma physics . . . . .	1
1.2 Time and distance scales . . . . .	4
1.3 Magnetized plasma . . . . .	12
<b>2 Charged Particle Motion</b>	<b>17</b>
2.1 Magnetization . . . . .	17
2.2 Motion in constant fields . . . . .	18
2.3 Method of averaging . . . . .	20
2.4 Guiding center motion . . . . .	22
2.5 Invariance of the magnetic moment . . . . .	28
2.6 Case of stationary fields . . . . .	31
2.7 Guiding center Lagrangian . . . . .	35
2.8 Motion in oscillating fields . . . . .	37
<b>3 Fluid Description of a Plasma</b>	<b>43</b>
3.1 Value of fluid description . . . . .	43
3.2 Moments of the distribution function . . . . .	46
3.3 Fluid conservation laws . . . . .	48
3.4 Alternative versions . . . . .	52
3.5 Magnetized plasma fluid . . . . .	58
3.6 Exact fluid closures . . . . .	69
<b>4 Waves in a Cold Plasma</b>	<b>77</b>
4.1 A speedy-wave closure . . . . .	77
4.2 Plane waves in a homogeneous plasma . . . . .	78
4.3 Wave propagation . . . . .	84
4.4 Representation of the dispersion relation . . . . .	92
4.5 Waves propagating parallel to $\mathbf{B}_0$ . . . . .	96
4.6 Waves propagating perpendicular to $\mathbf{B}_0$ . . . . .	100
4.7 Propagation at arbitrary angle . . . . .	102
4.8 Alfvén waves . . . . .	103

4.9	Stability in the cold plasma model . . . . .	105
<b>5</b>	<b>MHD and the Drift Model</b>	<b>113</b>
5.1	Magnetized fluid dynamics . . . . .	113
5.2	MHD . . . . .	114
5.3	Resistive MHD and magnetic reconnection . . . . .	122
5.4	The drift model . . . . .	126
5.5	Applications of the drift model . . . . .	138
5.6	Kinetic MHD . . . . .	143
<b>6</b>	<b>Vlasov Description of a Plasma</b>	<b>153</b>
6.1	Properties of the Vlasov equation . . . . .	154
6.2	The wave-particle resonance . . . . .	157
6.3	General solution of the Vlasov equation . . . . .	169
6.4	The plasma as a dielectric . . . . .	177
6.5	Case-Van Kampen modes . . . . .	181
6.6	Waves in a magnetized plasma . . . . .	183
6.7	Nonlinear solutions . . . . .	188
<b>7</b>	<b>Binary Collisions</b>	<b>195</b>
7.1	Correlations and collisions . . . . .	195
7.2	Fokker-Planck scattering . . . . .	198
7.3	Balescu-Lenard operator . . . . .	202
7.4	Landau-Boltzmann operator . . . . .	207
7.5	Calculus of collisions . . . . .	210
7.6	Approximations based on mass ratio . . . . .	217
7.7	Collisions with neutral particles . . . . .	222
<b>8</b>	<b>Collisional Transport</b>	<b>227</b>
8.1	Physics of diffusion . . . . .	227
8.2	Local transport theory . . . . .	230
8.3	Kinetic description of a magnetized plasma . . . . .	234
8.4	The Spitzer problem . . . . .	240
8.5	Variational transport theory . . . . .	246
8.6	Perpendicular transport . . . . .	254
<b>9</b>	<b>Turbulent Transport</b>	<b>263</b>
9.1	Turbulence and the closure problem . . . . .	263
9.2	Passive evolution . . . . .	265
9.3	The random gyrator . . . . .	266
9.4	Transport in a known spectrum . . . . .	271
9.5	Quasilinear theory . . . . .	275

<b>10</b>	<b>Description of a Relativistic Plasma</b>	<b>283</b>
10.1	Relativistic plasma . . . . .	283
10.2	Relativistic kinematics . . . . .	284
10.3	Relativistic electrodynamics . . . . .	287
10.4	Kinetic theory . . . . .	293
10.5	Moments of kinetic equation . . . . .	296
10.6	Maxwellian distribution . . . . .	299
10.7	Magnetized plasma . . . . .	302
<b>A</b>	<b>Derivation of Balescu-Lenard operator</b>	<b>307</b>
A.1	Preliminaries . . . . .	307
A.2	Diffusion tensor . . . . .	311
A.3	Dynamical friction . . . . .	313
A.4	Conclusion . . . . .	314
	<b>Bibliography</b>	<b>315</b>
	<b>Index</b>	<b>320</b>
