Preface	xii
Permissions and Copyrights	xiv
List of Tables	xvi
List of Figures	xviii
1 Risk and Safety of Engineered Systems	1
1.1 Risk and Its Perception and Acceptance	1
1.2 Overview of Risk and Safety Analysis	6
1.3 Two Historical Reactor Accidents	8
1.4 Definition of Risk	9
1.5 Reliability, Availability, Maintainability, and Safety	10
1.6 Organization of the Book	12
References	13
2 Probabilities of Events	15
2.1 Events	15
2.2 Event Tree Analysis and Minimal Cut Sets	17
2.3 Probabilities	19
2.3.1 Interpretations of Probability	19
2.3.2 Axiomatic Approach to Probabilities	20
2.3.3 Intersection of Events	21
2.3.4 Union of Events	22
2.3.5 Decomposition Rule for Probabilities	25
2.4 Time-Independent Versus Time-Dependent Probabilities	25
2.5 Time-Independent Probabilities	26
2.5.1 Introduction	26
2.5.2 Time-Independent Probability Distributions	27
2.6 Normal Distribution	31
2.7 Reliability Functions	35
2.8 Time-Dependent Probability Distributions	41
2.8.1 Erlangian and Exponential Distributions	42
2.8.2 Gamma Distribution	43

2.8.3 Lognormal Distribution	44	5.2.2 Solution of Markov Governing Equations	113
2.8.4 Weibull Distribution	46	5.2.3 An Elementary Example	116
2.8.5 Generalized "Bathtub" Distribution	47	5.3 Availability Analyses	118
2.8.6 Selection of a Time-Dependent Probability Distribution	48	5.3.1 Rules for Constructing Transition Rate Matrices	118
2.9 Extreme-Value Probability Distributions	50	5.3.2 Availability Transition Rate Matrices	119
2.10 Probability Models for Failure Analyses	52	5.3.3 Time-Dependent Availability Examples	123
References	53	5.3.4 Steady-State Availability	127
Exercises	53	5.4 Reliability Analyses	128
3 Reliability Data	59	5.4.1 Reliability Transition Rate Matrices	129
3.1 Estimation Theory	59	5.4.2 Time-Dependent Reliability Examples	130
3.1.1 Moment Estimators	60	5.4.3 Mean Time to Failure	130
3.1.2 Maximum Likelihood Estimators	61	5.5 Additional Capabilities of Markov Models	133
3.1.3 Maximum Entropy Estimators	64	5.5.1 Imperfect Switching Between System States	134
3.1.4 Comparison of Estimators	65	5.5.2 Systems with Nonconstant Hazard Rates	136
3.2 Bayesian Updating of Data	65	References	137
3.2.1 Bayes Equation	65	Exercises	137
3.2.2 Applications of the Bayes Equation	67		
3.3 Central Limit Theorem and Hypothesis Testing	70	6 Probabilistic Risk Assessment	141
3.3.1 Interpretation of the Central Limit Theorem	71	6.1 Failure Modes	142
3.3.2 Hypothesis Testing with the Central Limit Theorem	72	6.2 Classification of Failure Events	143
3.4 Reliability Quantification	74	6.2.1 Primary, Secondary, and Command Failures	143
3.4.1 Central Limit Theorem for Reliability Quantification	74	6.2.2 Common Cause Failures	144
3.4.2 Engineering Approach for Reliability Quantification	76	6.2.3 Human Errors	148
3.4.3 χ^2 -Distribution for Reliability Quantification	77	6.3 Failure Data	150
3.4.4 Three-Way Comparison and Concluding Remarks	78	6.3.1 Hardware Failures	150
References	80	6.3.2 Human Errors	150
Exercises	80	6.4 Combination of Failures and Consequences	152
4 Reliability of Multiple-Component Systems	85	6.4.1 Inductive Methods	152
4.1 Series and Active-Parallel Systems	86	6.4.2 Event Tree Analysis	154
4.1.1 Systems with Independent Components	86	6.5 Fault Tree Analysis	156
4.1.2 Systems with Redundant Components	88	6.5.1 Introduction	156
4.1.3 Fail-to-Safety and Fail-to-Danger Systems	90	6.5.2 Fault Tree Construction	157
4.2 Systems with Standby Components	93	6.5.3 Qualitative Fault Tree Analysis	157
4.3 Decomposition Analysis	96	6.5.4 Quantitative Fault Tree Analysis	160
4.4 Signal Flow Graph Analysis	100	6.5.5 Common Cause Failures and Fault Tree Analysis	165
4.5 Cut Set Analysis	101	6.6 Master Logic Diagram	165
References	104	6.7 Uncertainty and Importance Analysis	168
Exercises	104	6.7.1 Types of Uncertainty in PRAs	168
5 Availability and Reliability of Systems with Repair	109	6.7.2 Stochastic Uncertainty Analysis	169
5.1 Introduction	109	6.7.3 Sensitivity and Importance Analysis	170
5.2 Markov Method	111	References	172
5.2.1 Markov Governing Equations	111	Exercises	172
7 Computer Programs for Probabilistic Risk Assessment	179		
7.1 Fault Tree Methodology of the SAPHIRE Code	179		

7.1.1	Gate Conversion and Tree Restructuring	180	9.2.3	Clad Melting and Fuel Liquefaction	268
7.1.2	Simplification of the Tree	180	9.2.4	Molten Core Slumping and Relocation	270
7.1.3	Fault Tree Expansion and Reduction	182	9.2.5	Vessel Breach	271
7.2	Fault and Event Tree Evaluation with the SAPHIRE Code	183	9.3	Chernobyl Accident	272
7.3	Other Features of the SAPHIRE Code	185	9.3.1	Cause and Nature of the Accident—April 1986	272
7.4	Other PRA Codes	185	9.3.2	Sequence of the Accident	274
7.5	Binary Decision Diagram Algorithm	187	9.3.3	Estimate of Energy Release in the Accident	275
7.5.1	Basic Formulation of the BDD Algorithm	187	9.3.4	Accident Consequences	275
7.5.2	Generalization of the BDD Formulation	189	9.3.5	Comparison of the TMI and Chernobyl Accidents	276
7.5.3	Zero-Suppressed BDD Algorithm and the FTREX Code . .	193	9.4	Fukushima Station Accident	277
References		194	9.4.1	Sequence of the Accident—March 2011	277
Exercises		195	9.4.2	March 2011 Perspectives on the Fukushima SBO Event . .	278
8 Nuclear Power Plant Safety Analysis		197	9.5	Salem Anticipated Transient Without Scram	279
8.1	Engineered Safety Features of Nuclear Power Plants	197	9.5.1	Chronology and Cause of the Salem Incident	279
8.1.1	Pressurized Water Reactor	198	9.5.2	Implications and Follow-Up of the Salem ATWS Event . .	281
8.1.2	Boiling Water Reactor	210	9.6	LaSalle Transient Event	283
8.2	Accident Classification and General Design Goals	215	9.6.1	LaSalle Nuclear-Coupled Density-Wave Oscillations . .	283
8.2.1	Plant Operating States	217	9.6.2	Simple Model for Nuclear-Coupled Density-Wave Oscillations	287
8.2.2	Accident Classification in 10 CFR 50	217	9.6.3	Implications and Follow-Up of the LaSalle Incident . .	289
8.2.3	General Design Criteria and Safety Goals	219	9.7	Davis-Besse Potential LOCA Event	291
8.3	Design Basis Accident: Large-Break LOCA	220	9.7.1	Background and Chronology of the Incident	291
8.3.1	Typical Sequence of a Cold-Leg LBLOCA in PWR	221	9.7.2	NRC Decision to Grant DB Shutdown Delay	293
8.3.2	ECCS Specifications	225	9.7.3	Causes for the Davis-Besse Incident and Follow-Up . .	295
8.3.3	Code Scaling, Applicability, and Uncertainty Evaluation .	227	References		297
8.4	Severe (Class 9) Accidents	231	Exercises		300
8.5	Anticipated Transients Without Scram	233	10 PRA Studies of Nuclear Power Plants		303
8.5.1	History and Background of the ATWS Issue	233	10.1	WASH-1400 Reactor Safety Study	304
8.5.2	Resolution of the ATWS Issues	235	10.2	Assessment of Severe Accident Risks: NUREG-1150 . .	311
8.5.3	Power Coefficients of Reactivity in LWRs	237	10.2.1	Background and Scope of the NUREG-1150 Study . . .	311
8.6	Radiological Source and Atmospheric Dispersion	241	10.2.2	Overview of NUREG-1150 Methodology	313
8.6.1	Radiological Source Term	242	10.2.3	Accident Frequency Analysis	315
8.6.2	Atmospheric Dispersion of Radioactive Plume	243	10.2.4	Accident Progression Analysis	320
8.6.3	Simple Models for Dose Rate Calculation	247	10.2.5	Radionuclide Transport Analysis	324
8.7	Biological Effects of Radiation Exposure	250	10.2.6	Offsite Consequence Analysis	327
References		252	10.2.7	Uncertainty Analysis	330
Exercises		254	10.2.8	Risk Integration	331
9 Major Nuclear Power Plant Accidents and Incidents		259	10.2.9	Additional Perspectives and Comments on NUREG-1150 .	337
9.1	Three Mile Island Unit 2 Accident	260	10.3	Simplified PRA in the Structure of NUREG-1150	340
9.1.1	Sequence of the Accident—March 1979	260	10.3.1	Description of the Simplified PRA Model	340
9.1.2	Implications and Follow-Up of the Accident	260	10.3.2	Parametric Studies and Comments on the Simplified PRA Model	344
9.2	PWR In-Vessel Accident Progression	263	References		345
9.2.1	Core Uncovery and Heatup	265	Exercises		347
9.2.2	Cladding Oxidation	266			

11 Passive Safety and Advanced Nuclear Energy Systems	349
11.1 Passive Safety Demonstration Tests at EBR-II	349
11.1.1 <i>EBR-II Primary System and Simplified Model</i>	350
11.1.2 Unprotected Loss-of-Flow and Loss-of-Heat-Sink Tests . .	357
11.1.3 Simplified Fuel Channel Analysis	361
11.1.4 Implications of EBR-II Passive Safety Demonstration Tests	362
11.2 Safety Characteristics of Generation III+ Plants	364
11.2.1 AP1000 Design Features	364
11.2.2 Small-Break LOCA Analysis for AP1000	366
11.2.3 Economic Simplified Boiling Water Reactor	371
11.2.4 Reliability Quantification of SBWR Passive Safety Containment	375
11.3 Generation IV Nuclear Power Plants	382
11.3.1 Sodium-Cooled Fast Reactor	383
11.3.2 Hypothetical Core Disruptive Accidents for Fast Reactors .	387
11.3.3 VHTR and Phenomena Identification and Ranking Table .	393
References	396
Exercises	399
12 Risk-Informed Regulations and Reliability-Centered Maintenance	401
12.1 Risk Measures for Nuclear Plant Regulations	402
12.1.1 Principles of Risk-Informed Regulations and Licensing .	402
12.1.2 Uncertainties in Risk-Informed Decision Making	405
12.1.3 Other Initiatives in Risk-Informed Regulations	406
12.2 Reliability-Centered Maintenance	406
12.2.1 Optimization Strategy for Preventive Maintenance . . .	407
12.2.2 Reliability-Centered Maintenance Framework	409
12.2.3 Cost-Benefit Considerations	410
References	413
Exercises	415
13 Dynamic Event Tree Analysis	417
13.1 Basic Features of Dynamic Event Tree Analysis	418
13.2 Continuous Event Tree Formulation	421
13.2.1 Derivation of the Stochastic Balance Equation	421
13.2.2 Integral Form of the Stochastic Balance Equation . . .	423
13.2.3 Numerical Solution of the Stochastic Balance Equation .	425
13.3 Cell-to-Cell Mapping for Parameter Estimation	426
13.3.1 Derivation of the Bayesian Recursive Relationship . . .	427
13.3.2 CCM Technique for Dynamic Event Tree Construction .	430
13.4 Diagnosis of Component Degradations	434
13.4.1 Bayesian Framework for Component Diagnostics . . .	434
13.4.2 Implementation of the Probabilistic Diagnostic Algorithm .	437
References	441
Exercises	442
Appendix A: Reactor Radiological Sources	443
A.1 Fission Product Inventory and Decay Heat	443
A.2 Health Effects of Radiation Exposure	446
References	448
Appendix B: Some Special Mathematical Functions	449
B.1 Gamma Function	449
B.2 Error Function	451
References	451
Appendix C: Some Failure Rate Data	453
Appendix D: Linear Kalman Filter Algorithm	457
References	461
Answers to Selected Exercises	462
Index	467
