About the Authors XIX

WRITING A SCIENTIFIC PAPER I. THE WRITING PROCESS 1

Preamble **1**

1 Introduction **2**

2 Why do scientists write? **2**

3 Why do scientists publish? **3**

4 Printed paper *versus* oral communication **4**

5 Categories of scientific papers **5**

5.1 Regular research paper in a refereed journal 5
5.2 Letter to the Editor 6
5.3 Research Note 6
5.4 Review paper 6
5.5 Errata and Comments 6
5.6 Information bulletins and telegrams 7
5.7 Data papers 7
5.8 Papers on the design of instruments 7
5.9 PhD thesis book 7
5.10 Essays 8
5.11 Invited talk at a conference 8
5.12 Contributed paper at a conference 8
5.13 Conference posters and ticket papers 8
5.14 Book reviews 9
5.15 Publicity papers 9
5.16 Salami papers 9
5.17 Hoaxes 9
5.18 Duplicate papers 10
5.19 Gray literature 10

6 About language **11**

7 The reading process **13**

8 Writing a research paper **15**

9 The structure and organization of a scientific paper **18**
9.1 Title, subtitle and running title 19
9.2 Authors 20
9.3 Affiliations 22
9.4 Abstract 22
9.5 Key Words 23
9.6 Introduction 23
9.7 Methods, observations, computations and theory 24
9.8 Results 24
9.9 Analysis, discussion and conclusions 24
9.10 Acknowledgments 25
9.11 Dedications 26
9.12 References and citations 27
9.13 Postscript and Appendix 28
9.14 Index and glossary 28

10 Submitting your manuscript **28**
10.1 The very last step: deep proofreading 28
10.2 Etiquette and netiquette 30

11 What to avoid at all price **31**
11.1 Writing things that you do not understand 31
11.2 Drowning in acronyms 31
11.3 Mixing American & British styles 32
11.4 Clichés 32
11.5 Inconsistent capitalization 32
11.6 Footnotes and unnecessary emphasis 32
11.7 Sexism 33
11.8 Non-standard nomenclature 33
11.9 Misquoting, misciting and quoting out of context 34

12 Instructions and guidelines **37**
12.1 Editorial instructions 37
12.2 Copyrights 39

13 FAQs about the editorial process **40**
13.1 Who should be coauthor? 40
13.2 What is *honorary authorship?* 41
13.3 How to settle the order of author names? 42
13.4 What if a coauthor passes away? 43
13.5 Can the list of authors change during the review process? 43

13.6 Who submits the manuscript to the Editor? 43
13.7 Must I wait for a coauthor's consent to submit? 43
13.8 When to submit a manuscript to `astro-ph`? 44
13.9 How to communicate with the referee? 45
13.10 When to thank the referee? 46
13.11 Can a student be referee? 47
13.12 With whom can I share a referee report? 47
13.13 May I reproduce complete sentences? 47
13.14 How to cite or quote a straying paper? 49
13.15 How to sort words that incorporate diacritics? 49
13.16 To cite the URL or to cite the complete bibliometric reference? . 50
13.17 Why publish your data? 50
13.18 Why do journals engage in publishing data? 51
13.19 How to cope with writer's block? 51
13.20 Should I allow someone else to completely rewrite my manuscript? 52
13.21 What to do when disagreeing with editorial changes? 52
13.22 Is it too much to expect authors to read the papers they cite? . . 54
13.23 How to review a paper? 54
13.24 How to revise a multi-authored paper? 56
13.25 When can I ask for another referee? 57
13.26 Why do Editors edit, and why do referees review? 58

14 Summary **59**

Postscript **59**

WRITING A SCIENTIFIC PAPER II. COMMUNICATION BY GRAPHICS 65

1 Introduction **65**

2 Data graphics and visual communication **67**
2.1 Written communication 67
2.2 Processing visual information 69
2.3 Why use graphs at all? 70
2.4 Images, graphs and tabular structures 70

3 Text without graphics and graphics without text **70**
3.1 Consequences of non-graphical communication: an example 71
3.2 Non-textual communication: an example 72

4 Design types of graphs **75**
4.1 Points and lines . . . 75
4.1.1 Scatter plots . . . 75
4.1.2 Vector plots . . . 76
4.1.3 Line graphs . . . 76
4.1.4 Time series and phase diagrams . . . 76
4.1.5 Timelines . . . 77
4.2 Box-whisker plots . . . 77
4.3 Surface plots . . . 78
4.3.1 Histograms . . . 78
4.3.2 Bar graphs . . . 80
4.3.3 Pie charts . . . 80
4.3.4 Bubble graphs and pictographs . . . 82
4.3.5 Contour maps . . . 82
4.3.6 Sky maps . . . 82
4.3.7 Ternary diagrams . . . 82
4.4 Genuine 3-D surfaces . . . 83
4.5 Drawings and cartoons . . . 87
4.6 Which design type of graph? . . . 88

5 Computer graphics **89**
5.1 Vector images . . . 90
5.2 Raster or bitmap images . . . 90
5.3 Converting bitmap to vector data and *vice versa* . . . 91
5.4 File formats . . . 91

6 Photographs **94**
6.1 Halftones . . . 94
6.2 Halftones and Moiré patterns . . . 95

7 Elements of a graphical image **96**
7.1 Aspects of textual components in graphics . . . 97
7.1.1 Typefaces and fonts . . . 97
7.1.2 Typesetting units of length: pixels, points and picas . . . 98
7.1.3 Which typeface and which font to use in graphics? . . . 98
7.1.4 Font size . . . 99
7.2 Graph title . . . 101
7.3 Axes . . . 102
7.3.1 Axis orientation, and origin . . . 102
7.3.2 Axis tickmarks . . . 102
7.3.3 Axis title and units . . . 104
7.3.4 Axis type . . . 106
7.3.5 Axis labels . . . 108
7.3.6 Axis scale . . . 108

7.3.7 Axes and framing . . . 110
7.3.8 Background colors and lighting conditions . . . 110
7.4 Plotting . . . 112
7.4.1 Plot symbols and lines . . . 112
7.4.2 Autoclipping . . . 112
7.4.3 Error bars . . . 112
7.5 Graphics and texts as image components . . . 112
7.5.1 Legend or key, and labels . . . 113
7.5.2 Scale factors and orientation . . . 114
7.5.3 Insets . . . 114
7.5.4 Grid lines . . . 115
7.5.5 Decoration . . . 116
7.6 Aspects of composition . . . 117
7.6.1 Galleries . . . 117
7.6.2 Size ratios . . . 118
7.6.3 Figure captions . . . 119
7.6.4 Figure numbering and placement . . . 119

8 Image quality: high resolution and low resolution **120**
8.1 Image resolution . . . 120
8.2 Sampling frequency and scanning . . . 122

9 The complexities of handling color **124**
9.1 Why use color in graphics communication? . . . 124
9.2 Different colors for everyone . . . 125
9.3 An early generic mathematical color model . . . 126
9.4 Color models, color spaces and color palettes . . . 130
9.4.1 The CIE XYZ color space . . . 131
9.4.2 The RGB and $sRGB$ color spaces . . . 132
9.4.3 The $CMYK$ color space . . . 132
9.4.4 Device-independent colors: spot colors . . . 135
9.4.5 Degenerate color spaces . . . 135
9.5 Color workflow . . . 138
9.5.1 Color management . . . 138
9.5.2 Proper color balance and gray tonality . . . 139
9.5.3 Color transformations . . . 140
9.5.4 When to change color space? . . . 142

10 Principles of graphical excellence **143**
10.1 Managing ink . . . 143
10.2 Revise, edit, revise, edit, and revise, edit . . . 144
10.3 Layout: the typeset page as an image . . . 146
10.4 Style . . . 147

11 Lying with graphs **148**
11.1 The copyright . . . 148
11.2 Retracing graphs . . . 149
11.3 The lie factor . . . 150
11.4 Outliers . . . 151
11.5 Dot joining, or "helping" the eye by connecting points . . . 153
11.6 The perception of linearity . . . 154
11.7 Curve fitting and overshoots . . . 159
11.8 Models and calibrations . . . 160

12 Tables and lists **162**

13 What to avoid at all price **164**

14 Summary **166**

Selected color graphics **171**

WRITING A SCIENTIFIC PAPER III. ETHICAL ASPECTS . . . 173

1 Introduction **173**

2 On truth **174**

3 On error **176**

4 On quality and value **179**
Quality. . . . 179
Value. . . . 180

5 On bibliometry and bibliometrics **182**
5.1 The measure of journals . . . 182
5.1.1 The impact factor . . . 182
5.1.2 The cited half-life . . . 184
5.1.3 The immediacy index . . . 184
5.2 The measure of scientists . . . 184
5.2.1 Paper counts . . . 184
5.2.2 Citation rates and citation index . . . 187
5.2.3 The Hirsch h index . . . 188
5.3 Should bibliometrics guide you in the decision where to publish? . . . 193

6 Researcher misconduct **194**
6.1 Amplification of work . . . 194
6.2 On secrecy and secretiveness . . . 195
6.3 Forging . . . 195

6.4 Trimming . . . 197
6.5 Cooking . . . 197
6.6 Data manipulation . . . 199
6.7 Image manipulation . . . 200

7 Author misconduct 201
7.1 Lying about publication status . . . 201
7.2 Cascade submissions . . . 202
7.3 Omitting author names . . . 202
7.4 Incorrect authorship order . . . 202
7.5 Adding noncontributing authors . . . 203
7.6 Refusal to accept responsibility . . . 203
7.7 Abusing the referee . . . 204
7.8 Misquoting, improper attribution and wrongful citation practice . 204
7.9 Hoaxes . . . 205
7.10 Copyright infringement and plagiarism . . . 205
7.11 Self-plagiarism, text recycling and paraphrasing . . . 208
7.12 Dual and redundant publications . . . 209

8 Referee misconduct 210
8.1 Breaching confidentiality . . . 211
8.2 Hasty or superficial revision . . . 212
8.3 Long revision times . . . 212
8.4 Professional arm wrestling and taking revenge . . . 212
8.5 Silencing dissent . . . 212
8.6 Anonymity and its effects . . . 213
8.7 Conflicts of interest . . . 214

9 Grant-reviewer misconduct 216

10 Editorial misconduct and editorial mismanagement 217
10.1 Non-responsive or inactive Editors . . . 217
10.2 Inappropriate modifications of manuscripts . . . 218
10.3 Proximity between authors and journals . . . 219
10.4 Forging, bypassing or shortcutting the refereeing process . . . 219
10.5 Manipulation of the journal impact factor . . . 220
10.6 Breaching confidentiality . . . 221

11 Publisher misconduct and mismanagement 222
11.1 Manipulation of journal content . . . 222
11.2 Manipulation of journal impact factors . . . 223

12 Research supervisor misbehavior 223
12.1 Creativity or routine? . . . 225
12.2 Authorship ethics . . . 226

13 Dealing with the Press **228**

14 The signatures of scientific misconduct **231**

15 The causes of scientific misconduct **232**
15.1 Increased administrative burdens 232
15.2 Career pressure and competition 232
15.3 Misunderstanding bibliometry 233

16 Cures for misconduct **234**
16.1 Accepting the limits of discovery 234
16.2 Research misconduct policies 234
16.3 Mending the business model of journals 235
16.4 Establishing policies on research misconduct: an example 237
16.5 Detecting dual publication and plagiarism: an example 239

17 Where to go for help: whistleblowing **241**
17.1 Motivations for whistleblowing 241
17.2 Whistleblowing: how to 242
17.3 Whistleblowing and its aftermath 244

18 On the biases of bibliometric indices **246**
18.1 Errors of confusion by the database construction 247
18.2 Errors of confusion by the database user 248
18.3 Errors of omission and inclusion 249
18.4 Inherent bias 252
18.5 Errors of procedure 255
18.6 On rankings based on one single quantity 259
18.7 On the use and abuse of bibliometric indices 263
18.8 Some serious warnings 264
18.9 Summary of bias factors 265
18.10 Repairing bibliometrics 267
18.11 On the true meaning of bibliometric indicators 270

19 How can truth and value ever survive? **271**

Epilog **273**

Subject Index 285
Name Index 297
