Contents

Preface **xi**

About the Authors **xv**

1 Principal Concepts of Kinetic Equations **1**
- 1.1 Introduction **1**
- 1.2 Kinetic Equations of Boltzmann Kind **1**
- 1.3 Vlasov's Type Equations **3**
- 1.4 How did the Concept of Distribution Function Explain Molecular-Kinetic and Gas Laws to Maxwell **4**
- 1.5 On a Kinetic Approach to the Sixth Hilbert Problem (Axiomatization of Physics) **6**
- 1.6 Conclusions **7**

2 Lagrangian Coordinates **9**
- 2.1 The Problem of *N*-Bodies, Continuum of Bodies, and Lagrangian Coordinates in Vlasov Equation **9**
- 2.2 When the Equations for Continuum of Bodies Become Hamiltonian? **11**
- 2.3 Oscillatory Potential Example **12**
- 2.4 Antioscillatory Potential Example **13**
- 2.5 Hydrodynamical Substitution: Multiflow Hydrodynamics and Euler-Lagrange Description **14**
- 2.6 Expanding Universe Paradigm **16**
- 2.7 Conclusions **18**

3 Vlasov-Maxwell and Vlasov-Einstein Equations **19**
- 3.1 Introduction **19**
- 3.2 A Shift of Density Along the Trajectories of Dynamical System **19**
  - 3.2.1 *Method* 1. Dirac's δ-Function Method **20**
  - 3.2.2 *Method* 2. Balance of Particles **21**
  - 3.2.3 Conclusion **21**
- 3.3 Geodesic Equations and Evolution of Distribution Function on Riemannian Manifold **21**
  - 3.3.1 *Method* 1. Coordinate–Impulse Change of Variables and Hamiltonian Formalism **22**
  - 3.3.2 *Method* 2. Invariant Measure in Coordinate-Velocity Space **23**
  - 3.3.3 Conclusion **24**

3.4 How does the Riemannian Space Measure Behave While Being Transformed? 24
3.5 Derivation of the Vlasov-Maxwell Equation 25
3.6 Derivation Scheme of Vlasov-Einstein Equation 28
3.7 Conclusion 28

4 Energetic Substitution 29
4.1 System of Vlasov-Poisson Equations for Plasma and Electrons 29
4.2 Energetic Substitution and Bernoulli Integral 30
4.3 Boundary-Value Problem for Nonlinear Elliptic Equation 30
4.4 Verifying the Condition $\Psi' \geq 0$ 31
4.5 Conclusions 32

5 Introduction to the Mathematical Theory of Kinetic Equations 35
5.1 Characteristics of the System 35
5.2 Vlasov-Maxwell and Vlasov-Poisson Systems 39
5.3 Weak Solutions of Vlasov-Poisson and Vlasov-Maxwell Systems 40
5.4 Classical Solutions of VP and VM Systems 42
5.5 Kinetic Equations Modeling Semiconductors 42
5.6 Open Problems for Vlasov-Poisson and Vlasov-Maxwell Systems 45

6 On the Family of the Steady-State Solutions of Vlasov-Maxwell System 49
6.1 Ansatz of the Distribution Function and Reduction of Stationary Vlasov-Maxwell Equations to Elliptic System 49
6.2 Boundary Value Problem 54
6.3 Solutions with Norm 64

7 Boundary Value Problems for the Vlasov-Maxwell System 69
7.1 Introduction 69
7.2 Existence and Properties of the Solutions of the Vlasov-Maxwell and Vlasov-Poisson Systems in the Bounded Domains 71
7.3 Existence and Properties of Solutions of the VM System in the Bounded Domains 73
7.4 Collisionless Kinetic Models (Classical and Relativistic Vlasov-Maxwell Systems) 74
7.4.1 Quantum Models: Vigner-Poisson and Schrödinger-Poisson Systems 74
7.4.2 Mixed Quantum–Classical Kinetic Systems 75
7.5 Stationary Solutions of Vlasov-Maxwell System 75
7.5.1 Reduction of the Problem (7.5.1)–(7.5.5) to the System of Nonlinear Elliptic Equations 76
7.5.2 Reduction of System (7.5.22), (7.5.23) to Single Equation 80
7.6 Existence of Solutions for the Boundary Value Problem (7.5.28)–(7.5.30) 84

7.7 Existence of Solution for Nonlocal Boundary Value Problem 90
7.8 Nonstationary Solutions of the Vlasov-Maxwell System 95
7.8.1 Reduction of the Vlasov-Maxwell System to Nonlinear Wave Equation 95
7.8.2 Existence of Nonstationary Solutions of the Vlasov-Maxwell System in the Bounded Domain 101
7.9 Linear Stability of the Stationary Solutions of the Vlasov-Maxwell System 105
7.10 Application Examples with Exact Solutions 112
7.11 Normalized Solutions for a One-Component Distribution Function 125

8 Bifurcation of Stationary Solutions of the Vlasov-Maxwell System 133
8.1 Introduction 133
8.2 Bifurcation of Solutions of Nonlinear Equations in Banach Spaces 136
8.3 Conclusions 142
8.4 Statement of Boundary Value Problem and the Problem on Point of Bifurcation of System (8.4.7), (8.4.13) 143
8.5 Resolving Branching Equation 153
8.6 The Existence Theorem for Bifurcation Points and the Construction of Asymptotic Solutions 156

9 Boltzmann Equation 165
9.1 Collision Integral 165
9.2 Conservation Laws and *H*- Theorem 166
9.2.1 Conservation Laws 167
9.2.2 Boltzmann *H*- Theorem 168
9.2.3 Beams 168
9.2.4 Validity Conditions for Conservation Laws and *H*- Theorem 169
9.3 Boltzmann Equation for Mixtures 170
9.3.1 Chapman-Enskog Method and Hydrodynamics in Twice Divergent Form 172
9.3.2 Hilbert Method 172
9.3.3 Chapman-Enskog Method 172
9.4 Quantum Kinetic Equations (Uehling-Uhlenbeck Equations) 173
9.5 Peculiarity of Hydrodynamic Equations, Obtained from Kinetic Equations 174
9.6 Linear Boltzmann Equation and Markovian Processes 175
9.7 Time Averages and Boltzmann Extremals 177
9.7.1 Boltzmann Extremals 177
9.7.2 Boltzmann Extremals and the Liouville Equation 178
9.7.3 Boltzmann Extremals and the Ergodic Theorem 179

10 Discrete Models of Boltzmann Equation 183
10.1 General Discrete Models of Boltzmann Equation 183

10.2 Calerman, Godunov-Sultangazin, and Broadwell Models 183
10.2.1 Calerman Model 183
10.2.2 Broadwell Model 184
10.2.3 Godunov-Sultangazin Model 184
10.3 *H*- Theorem and Conservation Laws 185
10.3.1 Carleman Model 185
10.3.2 Broadwell Model 186
10.4 The Class of Decreasing Functionals for Discrete Models: Uniqueness Theorem of the Boltzmann *H*- Function 186
10.5 Relaxation Problem 187
10.6 Chemical Kinetics Equations and *H*- Theorem: Conditions of Chemical Equilibrium 188
10.6.1 Conclusion 192

11 Method of Spherical Harmonics and Relaxation of Maxwellian Gas 195
11.1 Linear Operators Commuting with Rotation Group 195
11.2 Bilinear Operators Commuting with Rotation Group 196
11.2.1 Computations of Eigenvalues 197
11.2.2 Fourier Transformation of Collision Integral 198
11.3 Momentum System and Maxwellian Gas Relaxation to Equilibrium. Bobylev Symmetry 200
11.4 Exponential Series and Superposition of Travelling Waves 202
11.4.1 Equations of the Form $\partial u/\partial t = F(u)$ 202
11.4.2 Waves Interaction Series 203
11.4.3 Investigating Resonance Relations 204
11.4.4 Convergence of the Series of n Interacting Traveling Waves 205
11.4.5 Final Remarks 208

12 Discrete Boltzmann Equation Models for Mixtures 211
12.1 Discrete Models with Impulses on the Lattice 211
12.2 Invariants 213
12.3 Inductive Process 214
12.4 On Solution of Diophantine Equations of Conservation Laws and Classification of Collisions 215
12.5 Boltzmann Equation for the Mixture in One-Dimensional Case 216
12.6 Models in One-Dimensional Case 216
12.7 The Models in Two-Dimensional Cases 217
12.8 Conclusions 219
12.9 Photo-, Electro-, Magneto-, and Thermophoresis and Reactive Forces 219
12.9.1 Model and a System of Equations 221
12.9.2 System of Equations in Maxwell Equilibrium for Small Velocities of a Particle 223
12.9.3 Applications 225
12.9.4 Conclusions 226

13 Quantum Hamiltonians and Kinetic Equations **227**
13.1 Conservation Laws for Polynomial Hamiltonians **227**
13.2 Conservation Laws for Kinetic Equations **229**
13.3 The Asymptotics of Spectrum for Hamiltonians of Raman Scattering **233**
13.3.1 Stokes Scattering **233**
13.3.2 Raman Scattering Considering Anti-Stokes Component **235**
13.4 The Systems of Special Polynomials in the Problems of Quantum Optics **236**
13.5 Representation of General Commutation Relations **237**
13.6 Tower of Mathematical Physics **238**
13.7 Conclusions **239**

14 Modeling of the Limit Problem for the Magnetically Noninsulated Diode **241**
14.1 Introduction **241**
14.2 Description of Vacuum Diode **241**
14.3 Description of the Mathematical Model **243**
14.4 Solution Trajectory, Upper and Lower Solutions **247**
14.5 Existence of Solutions for System (14.3.18)–(14.3.22) **254**
14.6 Analysis of the Known Upper and Lower Solutions **256**
14.7 Conclusions **259**

15 Generalized Liouville Equation and Approximate Orthogonal Decomposition Methods **261**
15.1 Introduction **261**
15.2 Problem Statement **265**
15.3 The Overview of Preceeding Results **267**
15.3.1 An Approach of M.E. Tuckerman Group on the Classical Mechanics of Non-Hamiltonian Systems **267**
15.3.2 Small–Time Parameter Method **269**
15.3.3 Hermite Polynomial Decomposition **272**
15.3.4 Advanced Convergence Results **275**
15.3.5 Partial Conclusions **278**
15.4 Eigen Expansion of Generalized Liouville Operator **279**
15.5 Hermitian Function Expansion **282**
15.6 Another Application Example for Hermite Polynomial Decomposition **285**

Glossary of Terms and Symbols **287**

Bibliography **289**
