List of Figures	xiii
List of Tables	xvii
Preface	xix
List of Symbols	xxi
1 Introduction to Magnetohydrodynamic Equations	1
1.1 Introduction	1
1.2 Magnetohydrodynamic (MHD) Equations	4
1.2.1 Two-Fluid MHD	6
1.2.2 Resistive MHD	8
1.2.3 Ideal MHD	9
1.2.4 Other Equation Sets for MHD	10
1.2.5 Conservation Form	10
1.2.6 Boundary Conditions	12
1.3 Characteristics	14
1.3.1 Characteristics in Ideal MHD	16
1.3.2 Wave Dispersion Relation in Two-Fluid MHD	23
1.4 Summary	24
2 Introduction to Finite Difference Equations	27
2.1 Introduction	27
2.2 Implicit and Explicit Methods	29
2.3 Errors	30
2.4 Consistency, Convergence, and Stability	31
2.5 Von Neumann Stability Analysis	32
2.5.1 Relation to Truncation Error	36
2.5.2 Higher-Order Equations	37
2.5.3 Multiple Space Dimensions	39
2.6 Accuracy and Conservative Differencing	39
2.7 Summary	42

3 Finite Difference Methods for Elliptic Equations	45
3.1 Introduction	45
3.2 One-Dimensional Poisson's Equation	46
3.2.1 Boundary Value Problems in One Dimension	46
3.2.2 Tridiagonal Algorithm	47
3.3 Two-Dimensional Poisson's Equation	48
3.3.1 Neumann Boundary Conditions	50
3.3.2 Gauss Elimination	53
3.3.3 Block-Tridiagonal Method	56
3.3.4 General Direct Solvers for Sparse Matrices	57
3.4 Matrix Iterative Approach	57
3.4.1 Convergence	59
3.4.2 Jacobi's Method	60
3.4.3 Gauss–Seidel Method	60
3.4.4 Successive Over-Relaxation Method (SOR)	61
3.4.5 Convergence Rate of Jacobi's Method	61
3.5 Physical Approach to Deriving Iterative Methods	62
3.5.1 First-Order Methods	63
3.5.2 Accelerated Approach: Dynamic Relaxation	65
3.6 Multigrid Methods	66
3.7 Krylov Space Methods	70
3.7.1 Steepest Descent and Conjugate Gradient	72
3.7.2 Generalized Minimum Residual (GMRES)	76
3.7.3 Preconditioning	80
3.8 Finite Fourier Transform	82
3.8.1 Fast Fourier Transform	83
3.8.2 Application to 2D Elliptic Equations	86
3.9 Summary	88
4 Plasma Equilibrium	93
4.1 Introduction	93
4.2 Derivation of the Grad–Shafranov Equation	93
4.2.1 Equilibrium with Toroidal Flow	95
4.2.2 Tensor Pressure Equilibrium	97
4.3 The Meaning of Ψ	99
4.4 Exact Solutions	102
4.4.1 Vacuum Solution	102
4.4.2 Shafranov–Solovév Solution	104
4.5 Variational Forms of the Equilibrium Equation	105
4.6 Free Boundary Grad–Shafranov Equation	106
4.6.1 Inverting the Elliptic Operator	107
4.6.2 Iterating on $J_\phi(R, \Psi)$	107
4.6.3 Determining Ψ on the Boundary	109
4.6.4 Von Hagenow's Method	111
4.6.5 Calculation of the Critical Points	113

Table of Contents

ix

4.6.6	Magnetic Feedback Systems	114
4.6.7	Summary of Numerical Solution	116
4.7	Experimental Equilibrium Reconstruction	116
4.8	Summary	117
5	Magnetic Flux Coordinates in a Torus	121
5.1	Introduction	121
5.2	Preliminaries	121
5.2.1	Jacobian	122
5.2.2	Basis Vectors	124
5.2.3	Grad, Div, Curl	125
5.2.4	Metric Tensor	127
5.2.5	Metric Elements	127
5.3	Magnetic Field, Current, and Surface Functions	129
5.4	Constructing Flux Coordinates from $\Psi(R, Z)$	131
5.4.1	Axisymmetric Straight Field Line Coordinates	133
5.4.2	Generalized Straight Field Line Coordinates	135
5.5	Inverse Equilibrium Equation	136
5.5.1	q -Solver	137
5.5.2	J -Solver	138
5.5.3	Expansion Solution	139
5.5.4	Grad–Hirshman Variational Equilibrium	140
5.5.5	Steepest Descent Method	144
5.6	Summary	147
6	Diffusion and Transport in Axisymmetric Geometry	149
6.1	Introduction	149
6.2	Basic Equations and Orderings	149
6.2.1	Time-Dependent Coordinate Transformation	151
6.2.2	Evolution Equations in a Moving Frame	153
6.2.3	Evolution in Toroidal Flux Coordinates	155
6.2.4	Specifying a Transport Model	158
6.3	Equilibrium Constraint	162
6.3.1	Circuit Equations	163
6.3.2	Grad–Hogan Method	163
6.3.3	Taylor Method (Accelerated)	164
6.4	Time Scales	165
6.5	Summary	168
7	Numerical Methods for Parabolic Equations	171
7.1	Introduction	171
7.2	One-Dimensional Diffusion Equations	171
7.2.1	Scalar Methods	172
7.2.2	Non-Linear Implicit Methods	175
7.2.3	Boundary Conditions in One Dimension	179

Table of Contents

7.2.4	Vector Forms	180
7.3	Multiple Dimensions	183
7.3.1	Explicit Methods	183
7.3.2	Fully Implicit Methods	184
7.3.3	Semi-Implicit Method	184
7.3.4	Fractional Steps or Splitting	185
7.3.5	Alternating Direction Implicit (ADI)	186
7.3.6	Douglas–Gunn Method	187
7.3.7	Anisotropic Diffusion	188
7.3.8	Hybrid DuFort–Frankel/Implicit Method	190
7.4	Summary	192
8	Methods of Ideal MHD Stability Analysis	195
8.1	Introduction	195
8.2	Basic Equations	195
8.2.1	Linearized Equations about Static Equilibrium	195
8.2.2	Methods of Stability Analysis	199
8.2.3	Self-Adjointness of \mathbf{F}	200
8.2.4	Spectral Properties of \mathbf{F}	201
8.2.5	Linearized Equations with Equilibrium Flow	203
8.3	Variational Forms	204
8.3.1	Rayleigh Variational Principle	204
8.3.2	Energy Principle	205
8.3.3	Proof of the Energy Principle	206
8.3.4	Extended Energy Principle	207
8.3.5	Useful Identities	208
8.3.6	Physical Significance of Terms in δW_f	210
8.3.7	Comparison Theorem	211
8.4	Cylindrical Geometry	213
8.4.1	Eigenmode Equations and Continuous Spectra	214
8.4.2	Vacuum Solution	215
8.4.3	Reduction of δW_f	216
8.5	Toroidal Geometry	219
8.5.1	Eigenmode Equations and Continuous Spectra	220
8.5.2	Vacuum Solution	223
8.5.3	Global Mode Reduction in Toroidal Geometry	225
8.5.4	Ballooning Modes	226
8.6	Summary	232
9	Numerical Methods for Hyperbolic Equations	235
9.1	Introduction	235
9.2	Explicit Centered-Space Methods	235
9.2.1	Lax–Friedrichs Method	236
9.2.2	Lax–Wendroff Methods	237
9.2.3	MacCormack Differencing	238

Table of Contents

xi

9.2.4	Leapfrog Method	239
9.2.5	Trapezoidal Leapfrog	241
9.3	Explicit Upwind Differencing	242
9.3.1	Beam–Warming Upwind Method	244
9.3.2	Upwind Methods for Systems of Equations	245
9.4	Limiter Methods	247
9.5	Implicit Methods	249
9.5.1	θ -Implicit Method	251
9.5.2	Alternating Direction Implicit (ADI)	252
9.5.3	Partially Implicit 2D MHD	253
9.5.4	Reduced MHD	256
9.5.5	Method of Differential Approximation	257
9.5.6	Semi-Implicit Method	260
9.5.7	Jacobian-Free Newton–Krylov Method	262
9.6	Summary	264
10	Spectral Methods for Initial Value Problems	267
10.1	Introduction	267
10.1.1	Evolution Equation Example	268
10.1.2	Classification	269
10.2	Orthogonal Expansion Functions	269
10.2.1	Continuous Fourier Expansion	270
10.2.2	Discrete Fourier Expansion	272
10.2.3	Chebyshev Polynomials in $(-1, 1)$	273
10.2.4	Discrete Chebyshev Series	277
10.3	Non-Linear Problems	278
10.3.1	Fourier Galerkin	278
10.3.2	Fourier Collocation	279
10.3.3	Chebyshev Tau	280
10.4	Time Discretization	281
10.5	Implicit Example: Gyrofluid Magnetic Reconnection	283
10.6	Summary	286
11	The Finite Element Method	289
11.1	Introduction	289
11.2	Ritz Method in One Dimension	289
11.2.1	An Example	290
11.2.2	Linear Elements	290
11.2.3	Some Definitions	293
11.2.4	Error with Ritz Method	294
11.2.5	Hermite Cubic Elements	295
11.2.6	Cubic B-Splines	298
11.3	Galerkin Method in One Dimension	301
11.4	Finite Elements in Two Dimensions	304
11.4.1	High-Order Nodal Elements in a Quadrilateral	305

Table of Contents

11.4.2 Spectral Elements	309
11.4.3 Triangular Elements with C^1 Continuity	310
11.5 Eigenvalue Problems	316
11.5.1 Spectral Pollution	318
11.5.2 Ideal MHD Stability of a Plasma Column	320
11.5.3 Accuracy of Eigenvalue Solution	322
11.5.4 Matrix Eigenvalue Problem	323
11.6 Summary	323
Bibliography	325
Index	341
